Lancaster Farming

Serving The Central and Southeastern Pennsylvania Areas - Also Maryland, New Jersey and Delaware

VOL. 23 No. 37 | Lancaster Farming, Saturday, July 15, 1978 | $6.00 Per Year

Wheat yields low, but quality up

By DIETER KRIEG

LANCASTER — The wheat harvest in Lancaster County is turning out to be as disappointing as what the barley harvest was for most farmers.

Although the quality of this year's crop is receiving a very good and even excellent rating from all millers we talked to this week, the yield is down and the moisture is high. The weight per bushel, at 57 to 61 pounds in most cases, is very satisfactory. About eight to 10 per cent of the crop was reported to be combined as of Friday morning.

Early yield expectations range between 40 and 45 bushels per acre for most fields, according to several millers throughout the Garden Spot. "It doesn't look like a good year for the wheat harvest in this area," said a spokesman at Nolt's Mill, Lancaster, when he summed up his views on yield expectations.

Nelson Weaver of Lititz said the wheat is tough. It's

Walter Laird pushes beef all he can

By DIETER KRIEG

DOVER — Walter Laird can talk Angus, work Angus, eat Angus, and even dream Angus. Owner of a cow-calf operation north of this York County town, Laird has been in the purebred Angus business for 20 years and is presently serving as president of the Pennsylvania Angus Breeders Association.

Although he started, and still operates modestly, he has a sizable herd of Angus cows, heifers and steers which consistently get a rating of "choice" when young FFA'ers and 4-H'ers come to his farm. He sells most of his production to youngsters who are interested in the beef business. A number of his animals have gone on to become champions with either youthful or seasoned exhibitors such as Laird himself at the halter.

Showing cattle is one pleasure of life which Laird tries to take in as often as possible, he says. It's his fun, recreation, opportunity to meet with friends, and talk Angus. Laird is through and through a man who is devoted to his breed.

This robin built its nest in a planter hanging from the porch at Mrs. B. Snavely Garber's house, Willow Street. The family of birds has fascinated Mrs. Garber since June 18. The first egg was laid three days later. The nest is made with fine grass, and is lined with mud and animal hair. The little feathered friends are doing well and Mrs. Garber observes they'll soon be ready to leave their nest.

Egg prices expected to increase

By KENDACE BORRY

LITITZ — Summer egg prices are expected to increase seasonally, according to a report from United Egg Producers. That is their opinion, even though they add that there will be a two to three per cent more product available this year than last.

UEP anticipates that the higher prices on high protein foods will help increase the demand for eggs. That, along with the increased hatching use, they reason, should help move the surplus production through the Summer months.

The report goes on to say that commercial egg breakers, anticipating the higher-than-year-earlier prices later in the year, have been and should continue trying to build up their stocks in coming months so they will not have to pruchase as many shell eggs this coming Fall. They state that this too will help in aleviating some of the Summer surplus problems.

The number of hens and

4-H judging winners named

By LAUREL SCHAEFFER
Staff Correspondent

MOHRSVILLE - Charles Seidel of Berks County and Curtis Dietrich of Lehigh went away with the honors on July 7 as over 50 youths representing six counties in the southeast regional 4-H district competed in dairy judging contests.

Hosting the event were Long Meadows Farm, Hamburg; Dreibelbis Farms, Shoemakersville; and Reu-Hel Farms, Mohrsville, which gave the 4-Her's an opportunity to judge Jersey's, Guernsey's and Holsteins at the respective farms.

Seidel was awarded a trophy for scoring as high individual in the junior contest. He had placed first in judging Guernseys and third in Holsteins, while Dietrich took the trophy for high individual of the senior contest. Dietrich had placed first in Holsteins and Guernseys, putting him in the top spot overall.

Following are the results:

Junior Contest

Holstein

1. Tracy Snyder, Schuylkill County; 2. Mark

Lancaster Grain

Friday, July 14, 1978

These prices are made up of the average prices quoted by a number of participating area feed and grain concerns. It should be noted however, that not every dealer or broker handles each commodity. All prices are per bushel except ear corn and soybean meal which are per ton.

The average prices quoted Friday, July 14 are as follows:

	Bid+	Offered+
Ear Corn	68.00	78.00
Shelled Corn	2.58	2.78
Barley	1.73	1.85
Oats		
Local	1.35	1.57
Western	1.76	1.96
Wheat	3.20	3.30
Soybeans	6.08	——
Soybean Meal		231.00

Hens, heavy type, 14½-27, mostly 20-25; pullets 20-54, mostly 43-48; roasters 06-51; ducks 58-84, mostly 58-68; drakes 55-63; rabbits 41-67, mostly 55-60; guineas 1.82-1.92; mostly 1.82-1.90; pigeons, per pair 1.00-3.00, mostly 1.00-1.55.

Total coops sold 349.

PACMA Eggs

PACMA-FACTS

The following market is supplied by PACMA-FACTS, a direct marketing organization affiliated with the Pennsylvania Farmers' Association. Participating poultrymen are members of PACMA, which employs a fowl marketing agent, The Farmers' Agricultural Cooperative Trading Society (FACT) - to sell members' fowl. PACMA works directly with the PFA poultrymen in the program.

Farm point prices prevailing for fowl to be marketed by members during the week of July 10 were 11½ plant, and 9½ farm.

Baltimore Eggs

July 12, 1978

EGGS: Prices unchanged to higher on all sizes. Cartoning demand fair to occasional increased interest noted on smalls where 3-4 dollars stimulated needs. Other sizes adequate. Undertone fully steady.

Cartoned Eggs: Prices to retailers, state graded (min. 1 case sale).

Grade A Large 66-72.

Grade A Medium 54-60.

Philadelphia Eggs

July 12, 1978

EGGS: Prices unchanged to higher on all sizes. Cartoning demands fair to occasionally good where features involved coupon off sales on any size in progress. Extra large barely adequate, large adequate, mediums continue irregularly distributed but adequate overall. Undertone fully steady.

Prices to retailers: Sales to volume buyers, consumer grades white eggs in cartons, delivered: Store door

A Extra Large 56½-62. A Large 55½-60. A Medium 43½-47.

Eastern Pa. & N.J. Poultry

July 12, 1978

Prices steady on light type hens Farm offerings fully adequate for a fair steady processor interest Offerings of heavy type fully adequate for fair call

Prices paid at farm Light type hens 7-9½, mostly 9-9¼. FOB Plant 11-11½, mostly 11½ Heavy type hens. TFEWR

Hay Markets

Regional Hay

July 10, 1978

(All hay No. 2 and better, prices paid by dealers at the farm & per ton.)

Hay slow, steady to weak; Straw steady - Some new crop on the market.

Alfalfa 50.00-60.00 (few). Mixed hay 50.00-55.00. Timothy hay 40.00-50.00. Straw 50.00-60.00. Mulch 20.00-40.00.

Harvey Z. Martin Hay Market

Leola, Pa.
Wednesday, July 12, 1978
41 Loads

Alfalfa, 1 load 82; Timothy 45 to 80; Mixed Hay 49 to 66; Meadow Hay 1 load 68; Straw 2 loads 78 and 93; Ear Corn 65 to 83.

Delmarva Poultry

July 12, 1978

Ready-to-cook movement light and disappointing as both buyers and sellers take a wait and see position. Slaughter schedules reduced in some quarters. Today's LTL asking prices ranged lower at 55-56 on plant and 56-57 on US Grade A. Lot supplies adequate at weights and a wide range. Undertone weak.

Current Broiler/Fryer negotiated prices for immediate delivery includes mostly multiple-drop shipments to New York City from Delmarva.

Range: US Grade A 56-60; Plant Grade 56-58.50; Premium Grade A 65; Premium Plant 63.

Wtd. Avg.: US Grade A 57.40; Plant Grade 56.59; Premium Grade A 65; Premium Plant 63.

Premium X includes special services, selected competitive brands, etc.

HUBBARD WHITE MT. BROILERS

From chick to cage, we formulate feeds and feeding programs with your profit in mind.

Do you have an open mind?

Are you ready to devote an hour or two of your time *planning* for a more profitable future?

If your answer to both questions is yes, you owe it to yourself to read what we have to say.

Unlike many other feed companies, we develop *custom* feeding programs for each individual operation.

It all starts with a Pennfield man reviewing your operation with you. Your goals. Your records. The health and overall condition of your birds. Whether you grow chicks or buy started pullets. The type of equipment you use. The production potential of your flock. Your management practices. And other factors that have an effect on your profit potential.

With the aid of computers, we then design a feeding program specifically tailored to *your* birds needs—a program that can improve your profits by reducing expenses, increasing production, or both.

For example, when we recommended producers switch from a competitive 18% protein feed to an optimum-nutrient density Pennfield feed, there was no loss in production—and this one recommendation has saved as much as $12,000 a year depending on flock size.

There is no cost—or obligation—for this unique service. But you must take the first step by writing or phoning us. Do it today.

Pennfield Feeds, 711 Rohrerstown Rd., Lancaster, PA 17604. Local calls: Lancaster 299-2561, Red Lion 244-4511. In 717 and 215 areas dial toll free 800-732-0467.

THE OLD FARMER'S ALMANAC

JULY 17-23, 1978

Get out quick, good time for a picnic.

Watch out for lightning this week (don't go under a tree) Jesse James robbed his first train July 21, 1873 Full moon July 19 Average length of days for the week, 14 hours, 50 minutes Bunker Hill Monument in Charlestown, Mass , completed July 23, 1842 Trees will grow no more this year *It is a mighty good horse that never stumbles*

Ask the Old Farmer: An old-timer I knew used to refer to a boat anchor as a "killick" I never asked him its origin Do you know? W A , Block Island, R I

He really must have been an old-timer Haven t heard the word in years It s a stone, variously rigged in a forked stick to serve as an anchor The Chinese used them a good while before we ever thought of it

Home Hints Your cake will never stick if you use white sugar to ' flour" a cake pan

OLD FARMER'S WEATHER FORECASTS

New England: Partly sunny, warm with light rain to start, then mild and showery, may clear by Sunday

Greater New York-New Jersey: Hot with thundershowers to start, then sunny with scattered showers for remainder of week

Middle Atlantic Coastal: Sunny and hot, then thunderstorms at midweek, weekend sunny and seasonal

Piedmont & Southeast Coastal: Rain, heavy at times all week

Florida: Cooler than normal with rain all week

Upstate N.Y.-Toronto & Montreal: Hot with scattered thunderstorms all week

Greater Ohio Valley: Hot and humid with a few showers, end of week hot and partly cloudy

Deep South: Few showers, heavy in southeast, last part of week hot and sunny

Chicago & Southern Great Lakes: Some heavy showers and cool, last of week clear, very hot

Northern Great Plains-Great Lakes: Sunny, seasonal, partly sunny, very hot for week's end

Central Great Plains: Widespread showers, seasonal, hot west, seasonal east for most of week

Texas-Oklahoma: Cooler with showers to start, then sunny and mild, rain central and south end of week

Rocky Mountain: Very hot with few heavy showers south, scattered showers last part of week

Southwest Desert: Partly cloudy, hot with few showers north, week's end cloudy, seasonal

Pacific Northwest: Sunny and very hot to midweek, then partly cloudy with light showers

California: Sunny, hot with scattered showers all week

ANNOUNCING
QUEEN ROAD REFRIGERATION

IS NOW AN AUTHORIZED DISTRIBUTOR FOR

VM Diesel

"THE DIESEL WITH A DIFFERENCE"

Cuts your power costs because it's way ahead of its time on all points.

AVCO-VM diesel engines are world-proven money-savers They deliver maximum power efficiency immediately, under any sudden load or climate variation. Their higher power to weight ratios mean NO REDUCTION IN HORSEPOWER to qualify for pollution standards

They're stingy on fuel, too Many users report fuel consumption CUT IN HALF — and more — compared with gasoline engines. In some installations, our diesels are delivering more than TWICE the hours of operation per gallon of fuel.

Faultless performance is the norm, rather than the exception A choice of 27 premium quality air-cooled Avco-VM's (5 to 670-hp) means there's one that's right for your application

Modular, unitized construction means fewer specialized parts, lower weight per hp, lower maintenance costs, 70% parts interchangeability — and they'll fit the tightest space

EDITORIAL COMMENTS By DIETER KRIEG, EDITOR

Farm hats-the new common denominator

Earlier this week, I was paging through a newspaper which showed a panoramic view of the nation's Capitol during the time that thousands of farmers were protesting there. Then it occurred to me that not a single one of them fit the image of the so-called typical American farmer which many people - especially city folks - have in their minds.

Remember the farmer with the bib overalls and straw hat?

You and I have known for years that he has been replaced, but just the same, I was a bit overwhelmed by the uniformity of the new image.

If there is any one characteristic or item of clothing, etc. that seems to be the common denominator as far as the appearance of the American farmer is concerned, it has got to be the cap.

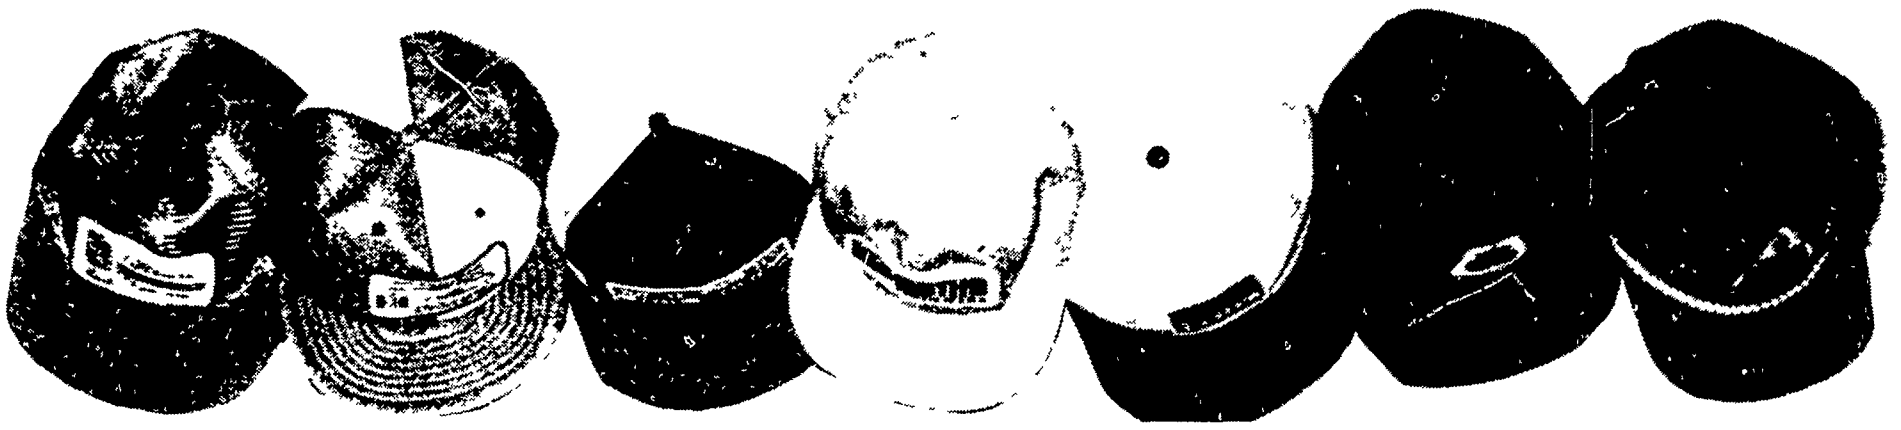
Yes, agriculture is such today that not even the rough hands or rugged tan applies to every individual. But chances are he'll be wearing a cap which boldly proclaims his loyalty to a particular brand of machinery, breed of cattle, seed corn, fertilizer, or farm organization. It seems like there's a cap around for just about any product that can be found on the farm. (Almost)

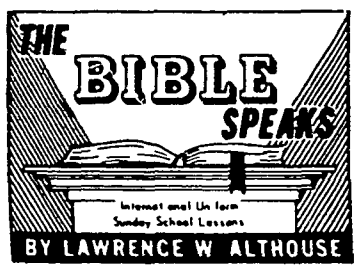
Whether they're given away free to customers, or purchased for a couple of dollars, farmers certainly seem to like the cap which has become a unique advertising medium for agribusiness and a new symbol of the American farmer.

The cap is more than that, however It's a practical item the farmer can wear while he's milking his cows, making hay, or crawling up a silo chute. That cap is a sun-shade, helmet, umbrella, and on occasion an emergency fly swatter, pocket, or glove. At times, it's even a nifty way to solve the problem of an unruly head of hair

The cap goes wherever the farmer goes, with the exception of church and related activities such as weddings and funerals. A farmer going to town is likely to wear his cap. If he goes to Washington to protest, his cap goes along You'll also find the farmer and his cap at many Sunday afternoon picnics, the community baseball diamond, and of course, field days

That cap gets around. It's no wonder all the agribusiness people are using the cap as an advertising medium. They sure beat ballpoint pens that hide in pockets most of the time, or calendars which were sprayed with whitewash months ago





IS IDLENESS A SIN?

Lesson for July 16, 1978

Background Scripture:
2 Thessalonians
Devotional Reading:
Titus 2:11-14.

A number of years ago there was a considerable attack on what was labled "Christianity's preoccupation with the work ethic." Some theologians thought that with the rise of mechanization and technology that the old work ethic was obsolete. Christians, particularly Protestants, they said, had made work into an idol. They called for a sweeping change in our thinking on this subject.

Imitate Us

At the time I wondered about these matters. Was it possible that work was not the good that I had always assumed that it was? Is there something in the work ethic that is destructive of spiritual values, as some theologians seemed to think? Since one cannot investigate such matters in a testube or under a microscope, I had to let the world about me be my laboratory.

I watched young people who got into trouble because they had nothing constructive to do. Their parents had conveniently freed them of the need to do any work or even chores. I watched older people who were retired at an age when others were just finding new levels of productivity and creativity. I saw retired people "die" in soft chairs in front of television sets. I saw people whose lives withered because they were denied the opportunity to find a way of making a contribution to society. I saw black people riot because they were being denied the opportunity to do meaningful work. I saw families disintegrate under the pressure of welfare.

My conclusion: work is surely one of God's greatest gifts to his children.

Earning Our Bread

Paul speaks clearly on this issue in 2 Thessalonians. There were some people in the church at Thessalonica who expected the Second Coming of Christ to take place immanently and had settled into a pattern of hand-to-mouth living that became a burden to those who had not given up their jobs. Someone can always find a good reason to let someone else support him!

Paul was adamant, however: "Keep away from any brother who is living in idleness" (3:6). Paul's words sound harsh, but he knew that idleness is like a communicable disease and he was afraid the whole church would be caught up in it. Pointedly he reminds them of the example he had set for them while in their city: "We were not idle when we were with you, we did not eat anyone's bread without paying for it, but with toil and labor we worked night and day that we might not burden any of you" (3:7,8).

This is what really makes idleness sinful: one cannot be idle without becoming a burden to someone else. Nothing is more destructive to the human spirit than to lose the capacity to "be fruitful" as God commanded Adam and Eve. Thus, said Paul, "if any one will not work, let him not eat" (3:10). It seems a harsh command, but it is one of the kindest things we can do for another.

NOW IS THE TIME

By Max Smith, Lancaster County Agricultural Agent
Phone 394-6851

TO CHECK SEPTIC TANKS

Most farm homes and homes in the rural areas have septic tanks as the waste disposal system; those septic tanks empty into a drain field or into a cesspool; from this area the liquids go out into the nearby soil. When the septic tanks get too full of solid, the system will not work right and the solids will get out into the drain field or the cesspool. When this happens the soil loses its ability to absorb moisture and the disposal system is in jeopardy.

We suggest that homeowners inspect their septic tank every two to three years and check on the amount of solid building up in the bottom; this can be done with a stick wrapped with cloth or turkish towel.

When the solids get to more than one-third of the depth of the septic tank, it had better be cleaned out. The length of time needed between cleanings will depend upon the size of both the family and the septic tank. Don't wait until the system is clogged and backing up into the home.

TO GRAZE SUDAN AND SORGHUM GRASSES CAREFULLY

Some livestock producers plant sudan grass or one of the hybrid sorghums for extra Summer pasture. These grasses have the ability to grow well during the heat of the Summer. However, they should be managed carefully in order to prevent livestock poisoning.

When the sudan is grazed or green-chopped before it is 18 inches high, and if the sorghum hybrids are used before they are 24 to 30 inches high, there is danger of prussic acid poisoning. There is greater danger with the sorghum hybrids.

After the herd or flock has grazed the area, it should be clipped high, and then the regrowth allowed to reach the same length before using as fresh feed. Horses should not be allowed to graze or eat either of these two forage crops; it has been blamed for causing urinary bladder infection in equines.

Manage sudan grass and the sorghums carefully for best results.

TO STORE GASOLINE CAREFULLY

Storing large amounts of gasoline for long periods of time may create some problems. In the first place, if the tank is above ground, there will be considerable evaporation in hot weather; the volatile part of gasoline that enables easy starting will be lost in 50 to 60 days; also, gasoline may become gummy after it ages and cause carburetor problems.

Tanks buried into the ground are suggested for best results. Any small amounts of gasoline stored in garages and homes is to be discouraged. However, this is needed in some cases for small engines; this should be stored in regular metal gasoline containers and not in plastic or glass.

Be careful with all of these explosive fuels.

TO BE CAREFUL WITH SPRAYERS

Weed killers are quite common these days to try to control weeds. Many of these sprayers are used for other purposes. Many of the weed-killer chemicals, such as 2, 4-D, will stick in spray equipment for years, unless soaked and washed out. Suggest separate equipment for weed chemicals, or do a good job of cleaning with ammonia water or other strong detergent.

While some companies look for ways to build bins cheaper, we find ways to build bins *better*. Bins that will last longer, look nicer and protect grain better.

That's why we use only prime high-tensile steel. And precision form and punch each piece.

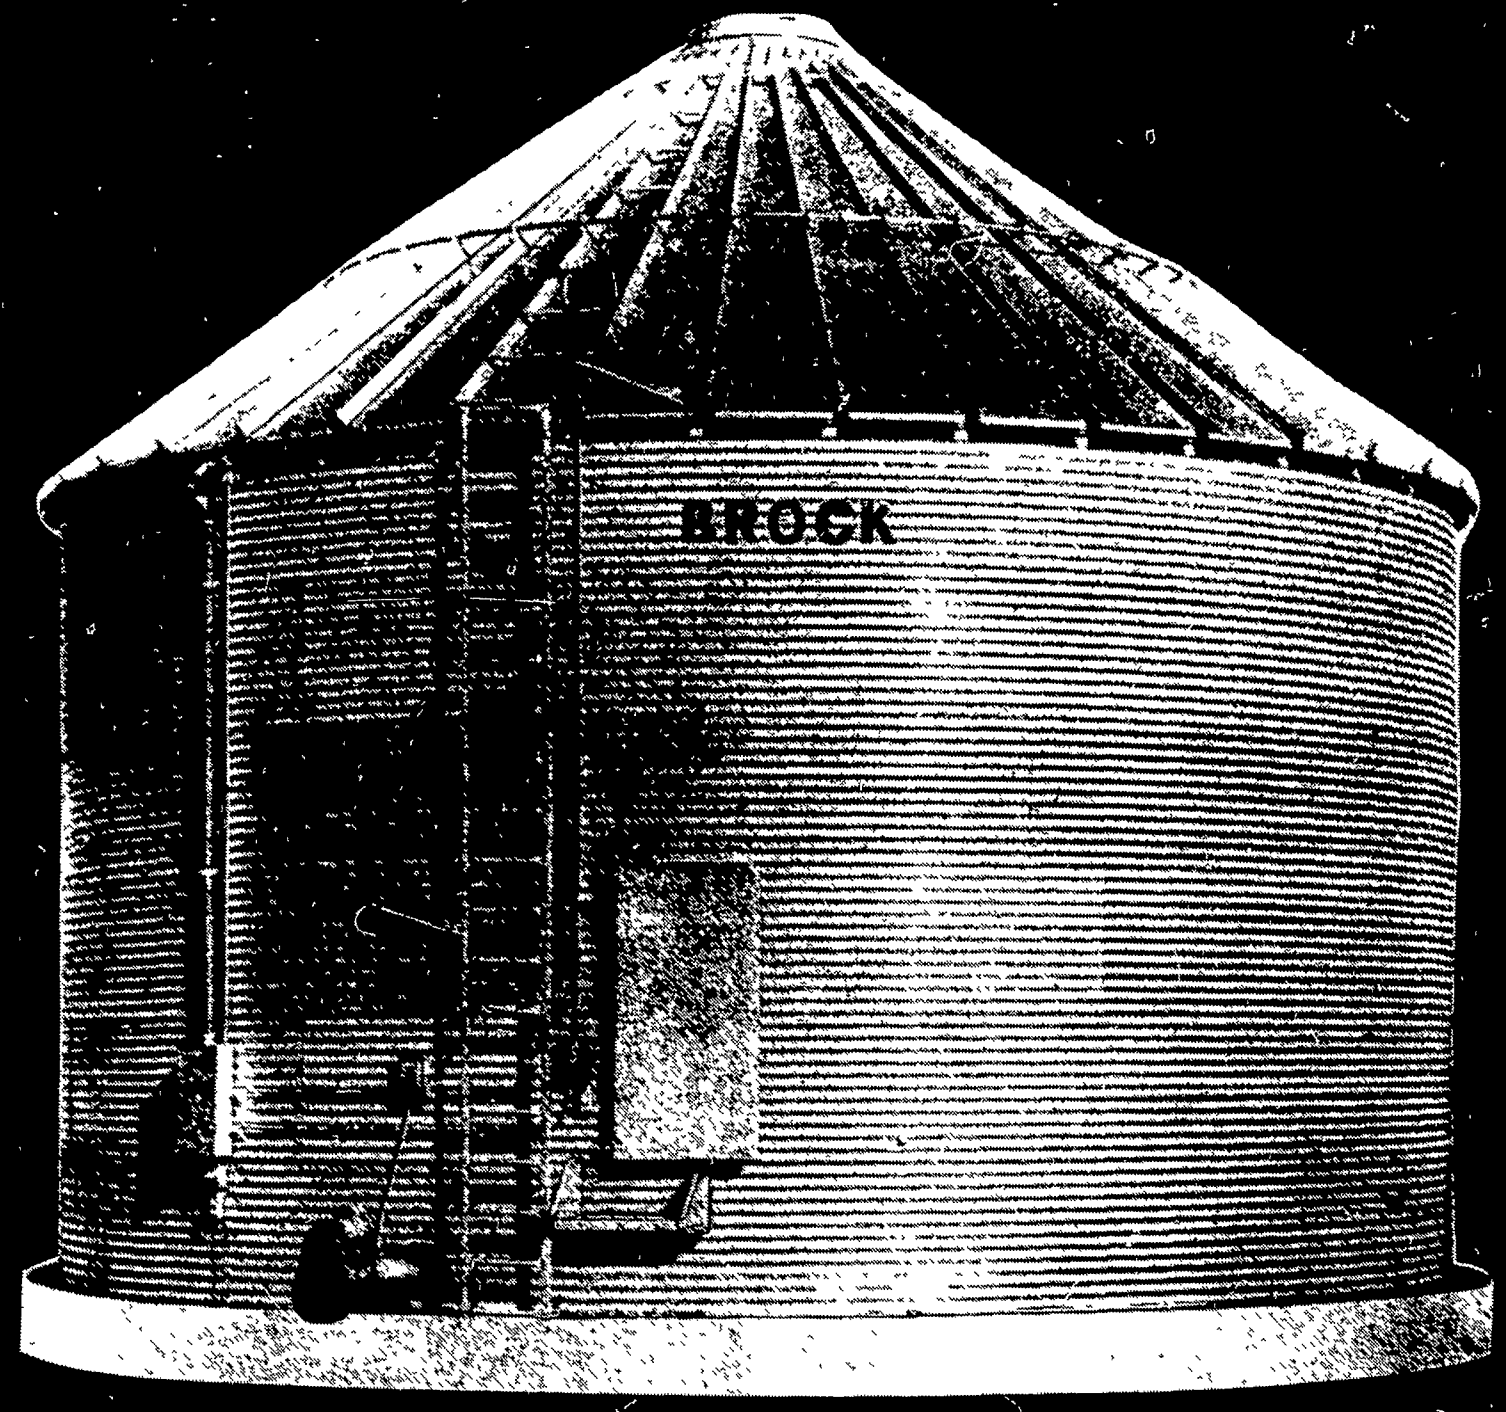
No, we won't cut corners. Because in the long run, cutting corners would just cost you more money.

For more information about all our money-saving design features, just write for a copy of our latest catalog.

BROCK

Hershey Equipment Company, Inc.

There are 10 ways we could cut our price. Any one of them will cost you.



- ☐ Reduce the 40-inch fill hole width to 24 inches.
- ☐ Eliminate the exclusive fill hole collar seal.
- ☐ Eliminate the circle of safety steps.
- ☐ Eliminate the adjustable roof stiffner ring.
- ☐ Eliminate 3-inch high roof ribs.
- ☐ Make the roof pitch less than 35 degrees.
- ☐ Eliminate the safety handrail by the manhole.
- ☐ Eliminate the tab between each rafter.
- ☐ Switch to a lighter gauge steel sidewall.
- ☐ Use lower grade bin bolts and washers.

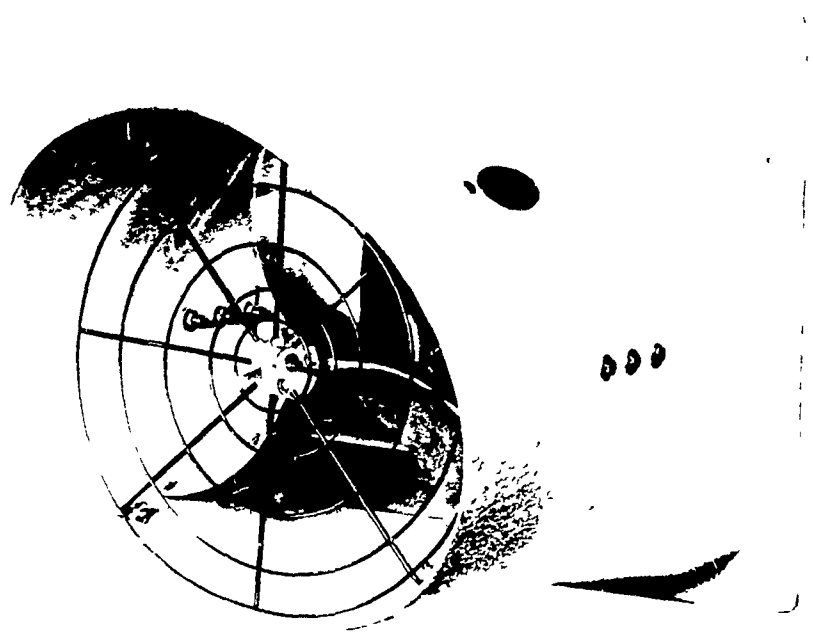
VENTILATION SYSTEMS FOR AGRICULTURE

FIBERGLASS VENTILATIONS FANS



Streamlined fiberglass fan housing:
- ☐ won't rust
- ☐ won't corrode
- ☐ no paint problems
- ☐ no square corners to collect dust and moisture
- ☐ more efficient air flow through housing
- ☐ flush wall mount housing
- ☐ 5-year guarantee on housing

Solid cast aluminum propellers:
- ☐ die cast props for perfect balance
- ☐ air foil design for better performance
- ☐ self-cleaning props
- ☐ won't rust

100% all aluminum shutter:
- ☐ full open position when fan is on
- ☐ no steel parts to rust
- ☐ easily removed from housing
- ☐ shutter on inside of building

Heavy duty motors:
- ☐ all capacitor type motors for greater electrical efficiency
- ☐ all 5/8" motor shafts
- ☐ all heavier bearings than most competitors
- ☐ larger motor housing for better cooling

Heavy steel plate motor mount:
- ☐ built to last a "lifetime"
- ☐ degreased, primed and painted
- ☐ no welds to break

Anti-rust front guard

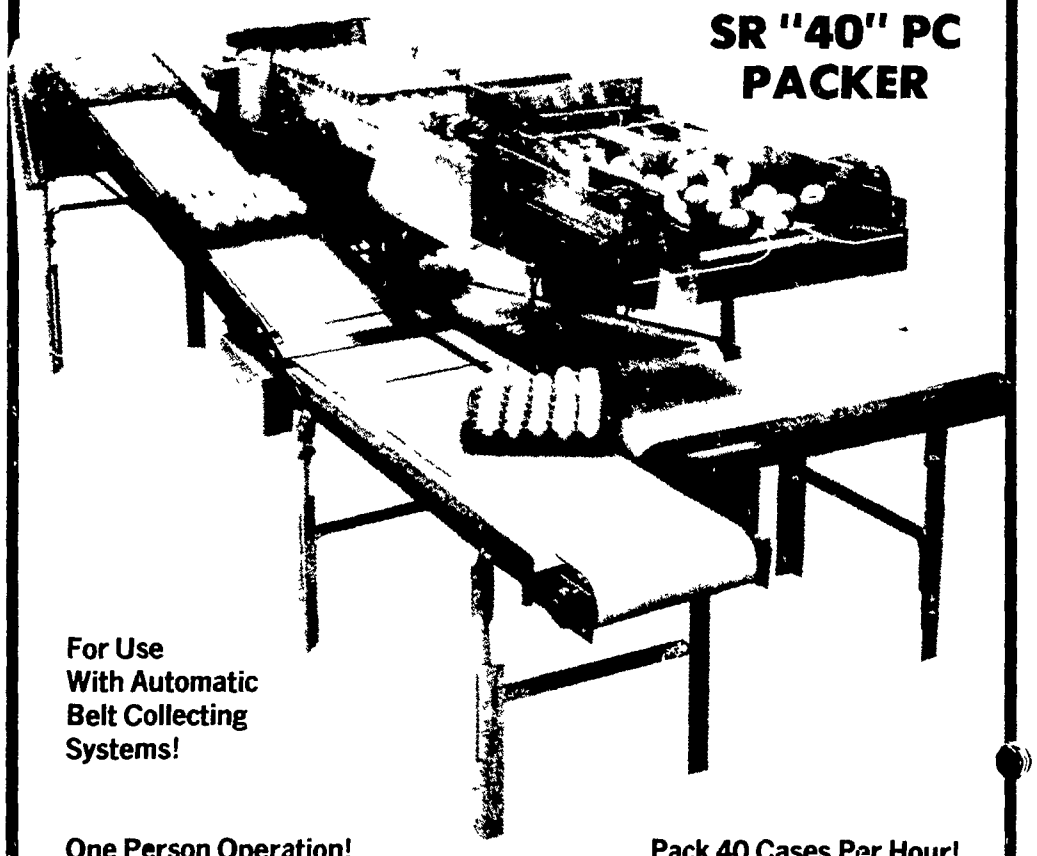
LANCASTER COUNTY 717-464-3321

EGOMATIC

SR "40" PC PACKER



For Use With Automatic Belt Collecting Systems!

One Person Operation! Pack 40 Cases Per Hour!

The spring cushion conveyors, for more gentle and positive egg handling, take the eggs thru the disc type orientors, which softly place them, points facing the same direction, into our blue cups. Here the operator merely places the package over the eggs

After going around the stainless steel drum and onto the take-away belts, your uncracked and unchecked eggs are ready for your cooler.

We also feature a sponge type egg oiler which can be added to your packer now or in the future

The totally mechanical, no electronic Egomatic SR "40" PC Packer, with it's limited maintenance, will give you years of trouble free packing.

Talk with one of our experienced salesmen today

Omaha Cattle

Omaha
July 13, 1978

CATTLE: Compared with previous weeks to close. Through midweek, slaughter steers were weak to 50 cents lower. Heifers closed mostly steady. Cows were 1.00-2.00 lower after an early advance lost. Bulls closed weak.

Four day receipts 14,600 as compared 7,400 previous week and 18,600 a year ago. Fed cattle prices declined the forepart of the week under bearish influence of a dull carcass trade, and most buying interests were selective. However most of the early downturn was regained in spirited mid-week trading as carcass prices pointed upward and most interests were in need of cattle for immediate requirements. One major buyer was still out of operation for plant renovation and vacations and much of the supply was bought for slaughter outside the immediate Omaha area. Slaughter steers made up approximately 51 pct. of the week's supply and heifers 31 pct, a fair percentage choice included. Cows comprised 12 pct. and feeders only 3 pct.

STEERS: At midweek, two loads Choice and Prime 3-4 1265 lbs. 57.00, These from same feedlot as record-setting 63.00 steers in late May, two loads Choice with end prime 3-4 1200-1225 lbs. 56.25. Choice 2-4 1000-1300 lbs. 54.50-56.25, Mixed Good and Choice 2-3 975-1250 lbs. 54.00-55.00, load 1330 lb. holsteins 50.00. Good 2-3 48.50-53.50. Standard and Good 2-3 46.50-48.00.

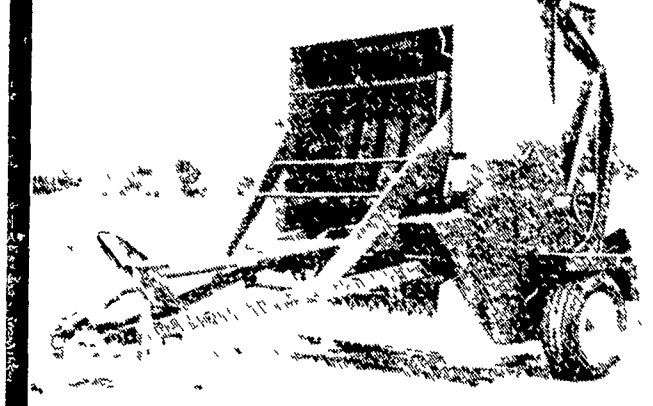
PAUL BOYER SAYS....

"Thanks! You've made our anniversary month the biggest June we have ever had.

We want you to know that the bargains never stop at Lancaster Ford Tractor. We are featuring special prices all this month on the Ford Round Baler."



FORD | Round Baler

MOVING THE BALES

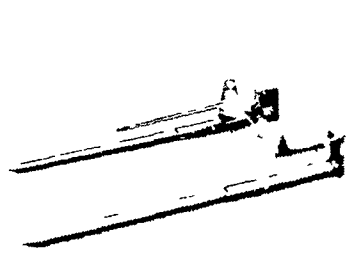
The Ford 562 Bale Carrier attaches quickly to Cat II tractors The sharp center shaft is solid steel for maintaining bale stability during the transport The side forks carry the bale

The Ford 563 Bale Handler attaches to Cat II or III tractors and comes complete with jackstand, safety bar, and lifting cylinder You can lift the bales onto transport vehicles - - - or simply unroll the bale for feeding

As a farmer, you know what a day or two delay at harvesting time can cost Nutrients lost from a few days delay can mean hundreds of dollars spent for the purchase of additional supplements at feeding time Today, all you need is *one* man, *one* tractor and *one* Ford 552 Round Baler to make up a complete baling system

Cut Harvesting Time and Reduce Costs.

Bales Up To Six Feet in Diameter and Weighing as Much as 1500 Pounds. One bale may contain as much hay as 20-25 conventional bales, and that means less twine After baling, the crop continues to dry and cure Outside moisture will mat the outer leaves and stems to form a protective weather-resistant coating The material under the outer coating stays fresh and nutritious until feeding



YOU WILL NEVER GET A BETTER PRICE ON THESE BALERS THAN RIGHT NOW!

TO SERVE YOU BETTER, OUR MECHANICS ARE NOW ENROLLED IN A FORD CERTIFICATION PROGRAM.

WE HAVE NOW INSTALLED A COMPUTER THAT TIES US DIRECTLY TO NINE REGIONAL PARTS DEPOTS TO GIVE YOU FAST & EFFICIENT PARTS SERVICE. SEE PAGE 52.

How and When to Treat Septic Systems

If the septic system has required pumping as often as once a year, the probability is that grease and solids have been going out into the seepage area, thus clogging or partially clogging the surrounding soil and restricting drainage

Even where pumping has not been necessary if the system is more than two or three years old, the probability is that some grease and solids have escaped into the outflow and trouble is not far off So the treatment schedule listed below will be applicable in either situation

FOR EVERY 4 PEOPLE USING THE SEPTIC SYSTEM

1 Start the MEDINA ACTINA program by flushing one pint ACTINA into any drain leading directly into the septic tank
2 Two weeks later repeat the above treatment
3 Thereafter, use one half pint each month Treat regularly

If the septic system has a distribution box between the septic tank and the seepage area, treat with ACTINA in the distribution box as follows

1 For every 50 people using the septic system pour 1 gallon ACTINA into the distribution box
2 Three weeks later repeat the same treatment

This low-cost preventive maintenance program will help to preserve the useful life of the investment in the septic system and will reduce the necessity to pump out solids to an absolute minimum When you consider the high cost of replacing the septic system or any part of it, the investment you will be making in ACTINA should reduce costs and show a worthwhile dividend

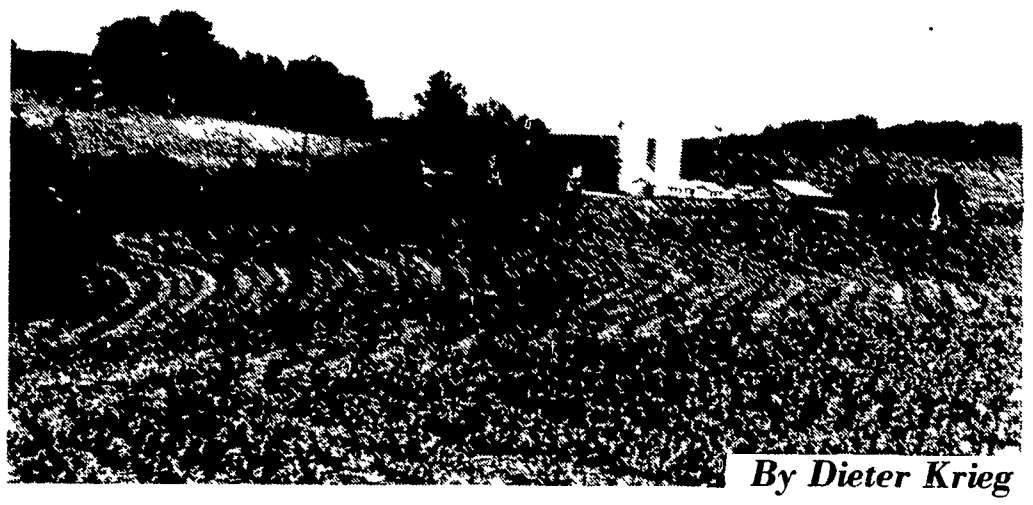
LIFE on the farm



By Dieter Krieg

If it weren't for July, I might have given up my residence in Pennsylvania seven years ago.

After having spent part of a Summer in sunny Florida, I returned to the Keystone State in early July and immediately fell in love with the scenery I had missed since May

Golden grain fields and lush green ribbons of corn rows stretched around the gently rolling hills. Laden with a ripe and heavy crop, the stalks of wheat and barley waved gently in the warm breezes of mid-Summer The corn was waist-high and higher The sun-bathed fields of green and gold were a sight to behold!

And there was more - as there is every Summer The sweet smell of hay perfumed the countryside. And I'll never forget the pleasant smell of straw, or the scent of moist earth which had been hidden under tall grain since Spring

Bright sunshine reflecting on the corn, standing wheat, or stubble is a display of Nature's jewelry. Florida certainly has its beauty - but nothing to compare with the pretty scenery of Pennsylvania's diversified farming.

Threshing machines have been a fascination of mine since I was a small child. They're gone now - except for appearances at special events But, here, in the heart of the Pennsylvania German country, I can still appreciate the long rows of shocks And the combine is almost as fascinating as a threshing machine Even the dust is a part of July, and I for one would miss it if it were gone

It's not comfortable, I know, and I've hated the itch of both grain and hay dust all over me, but that made the dip in the pond so much more enjoyable

And while I can't say I looked forward to milking hot, sweaty, smelly cows on a July afternoon, those same cows were a beautiful sight when I watched them graze later that evening Who can deny that the slick, black coat of a Holstein isn't pretty? And those long shadows stretching across the pasture as cooler air moves in and the sun settles into a nest in the distant forest - isn't that a precious sight?

I've never minded the heat of July either The work of the season can get tiresome and boring, but the beauty of Summer is everlasting no matter how high the mercury stretches.

July is also the time for sitting on a porch with a girlfriend or grandparents and listening to the soothing concert of a thousand crickets Later, as daylight fades, the frogs at the pond join in the music. Who can deny the pleasantries of such a scene?

The frogs and crickets continue their heavenly music long after bedtime. And the sweet smell of hay and straw drifts into open bedroom windows. A guy can certainly go to sleep with such a lullaby as long as there is just enough of a breeze to keep the curtains waving gracefully

That's all a part of life on the farm which I'll consider precious forever

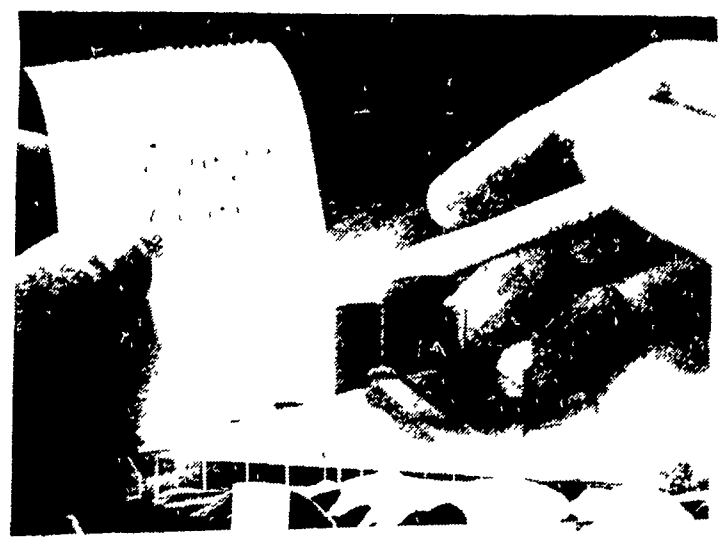

Figure it for yourself.

When you shortchange their nutrition, you shortchange yourself.

Looking for ways to cut on down on out-of-pocket feed costs without cutting down on milk production?

Cutting production costs will backfire if you end up shortchanging your herd's nutrition in the process.

But you can cut those costs safely by feeding homegrown grains and grain silage fortified with the right Vigortone Dairy Pre-Mix. These potent pre-mixes contain the proper levels of vitamins, calcium, phosphorus, and other minerals needed to balance your farm's feedstuffs.

Vigortone Dairy Pre-Mixes can be mixed in or metered on any palatable grain or roughage. This lets you change ration content to fit the supplies you have on hand without risking herd performance.

Better herd nutrition means a bigger milk check. Minimum out-of-pocket feed costs mean more in your pocket.

Your figures will prove it.

Dry cow nutrition pays future profits.

Shortchanging your dry cow's nutrition can be risky too. Most problems dairymen experience in getting cows back in the string can be traced to careless treatment during the dry period.

Keep them in top condition until their next lactation To help you do it, Vigortone has developed unique dairy pre-mixes specially concentrated for dry cow rations.

Now is the time to compare.

See your Vigortone dealer soon. He's ready to compare the performance of Vigortone's cost-saving dairy feeding programs with any other you name.

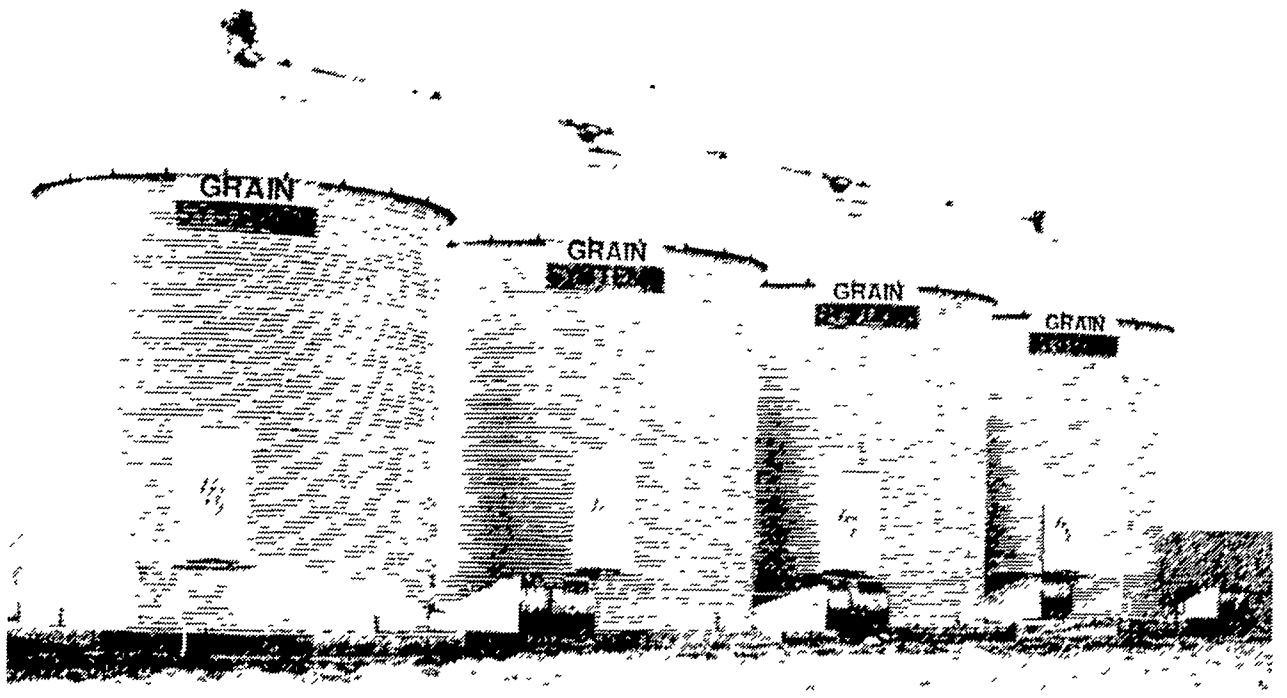
THE SYSTEM

THE MOST VERSATILE GRAIN DRYING, CONVEYING & STORAGE



A GSI ON-FARM STORAGE SYSTEM.

FEATURING:

- All galvanized steel with G-90 galvanized coating, including galvanized doors
- Our steel is A446 Quality or a minimum yield of 40,000 pounds per square inch.
- Walk around steps on top of roof.
- Equipped with safety rings.
- No welding anywhere on roof, prevents rust.
- Slotted holes to raise & lower roof for air movement for drying.

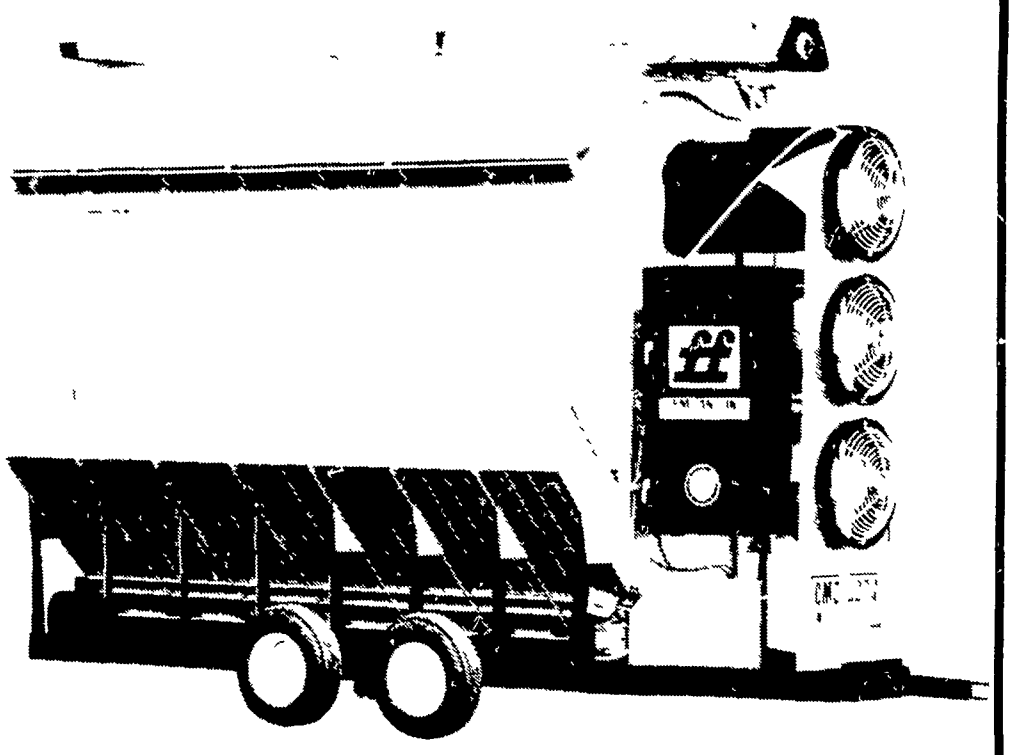
GSI has the system to meet your demands An on-farm storage system that lets you harvest when you're readyand sell when the price is right From one bin to an entire system, GSI bins are priced right!

GSI manufactures farm bins up to 60 ft diameters with capacities to 157,000 bushels Sturdy construction for maximum grain protection, with important safety features Easy field assembly

To complete the system, GSI offers an entire drying package and a full line of grain handling equipment to match your needs GSI on-farm storage system the profitable solution

THE ALL NEW J-SERIES

THE ENERGY SAVER



- Two models - CMS-320J, CMS-420J
- Choice of Continuous Multi-Stage or Continuous Flow drying.
- Exclusive Automatic System Control is weather-proof and tamperproof.
- "Temper Dries" automatically for premium quality grain.
- The J Series is specially designed to meet today's need to save energy.
- Big capacity drying for high volume grain operations
- Backed by almost 30 years experience in grain conditioning.

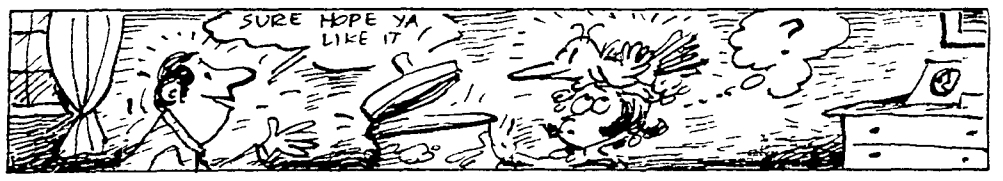
All day, and perhaps even all night, millers and small grain farmers are now in the midst of a most demanding season. These bin wagons were unloaded at Zook's Mill, Brownstown, on Thursday evening.



Some people have said it is bad luck to give anything decorated with birds as a wedding present

Wheat

(Continued from Page 1)

high in moisture but the quality is good, he noted, with emphasis on the good.

Although the harvest has just begun, and it may be too early to make a forecast, the general viewpoint among millers is that the crop isn't likely to improve. Already a week to 10 days behind schedule, the combines are beginning to cut into grass. While the wheat has stopped growing, the grass continues to get taller. The moisture problem isn't expected to evaporate. Frequent rains are once again interfering with combining schedules.

Most of the millers report few problems so far with impurities, which surprises a number of them, considering that the grasses and weeds have had an extra week to grow. Garlic is predominantly absent from the truckloads of wheat also.

The wheat arriving at the mills is testing out at 15 to 18 per cent moisture, according to the majority of reports. Loads delivered early in the week carried more moisture than those delivered Thursday, said Tom Flory of Flory's Mill, Lancaster

With farmers anxious to get their crop harvested, some loads are coming in at 19 per cent moisture. Yields are reported down in most areas. The average paying price for the new crop, delivered to the mill is $3.20 per bushel, according to an averaging of prices announced by the millers on Friday morning.

Mini-olympics practiced at 4-H meeting

DAVIDSBURG — The June meeting of the Davidsburg 4-H Club consisted of mini-Olympics, which was a dry run for county olympic competition. County olympics consist of events such as running, jumping, and egg tossing in which all the 4-H clubs of York County compete.

Susan Detter and Emily Livingston were congratulated on winning the top awards for York County in the bread and poultry divisions in the National Awards Program.

A camp-out will be held at the Lorne Detter farm in August. All participants will be requested to bring a permission slip from his or her parents before July 20 in order to participate in the festivities.

Meeting set

STEVENS - The next meeting of the Lincoln Community 4-H Club will be held on July 18, beginning at 6:30 p.m. at the Spring Lake Park. It is the group's annual swimming party and all are invited to attend.

Eastern announces cheese plants

SYRACUSE, N.Y. – A completely new market with rapidly expanding consumer acceptance that will remove 650 to 700 million pounds of milk from the Northeast dairy supply annually will soon be realized, according to officials of Eastern Milk Producers Cooperative, headquartered here.

Eastern's board of directors gave final approval, recently, to a contract with Leprino Cheese Company of Denver, Colo., which provides for Leprino's operation of two mozarella cheese plants within Eastern's membership area. This action followed an earlier affirmative vote of more than three to one by Eastern's 200 member delegate body to proceed with this program development.

In a letter to Eastern's nearly 7,000 dairy farmers members this month, the cooperative's president, Arden Tewksbury and General Manager, Howard McDonald explained the program's highlights.

The first step calls for immediate purchase, renovation and equipping of the Horseheads, N.Y. plant, at a total cost approaching 2 million dollars, with production scheduled to commence on or about November 1, 1978. Upon completion, this facility will produce about 18 million pounds of mozarella cheese from approximately 200 million pounds of milk annually.

Development of another cheese operation at a projected cost of 10 million dollars will be the program's second step. This will be accomplished by equipping an existing structure or constructing a new plant at a site yet to be determined. Approximately 500 million pounds of milk will be utilized at this second location in producing about 45 million pounds of cheese.

Leprino will be committed to purchase from Eastern certain volumes of milk over a 20 year period, and Eastern will be committed to supply such volumes. These supplies represent less than one half the cooperative's physically handled milk supply under the New York - New Jersey Federal Milk Marketing Order, alone.

Total cost of renovation, construction and purchase of equipment will be Eastern's responsibility. However, Tewksbury noted, "This entire cost, including financing, will be recovered from lease back payments by Leprino to Eastern. In addition, projections are that Eastern will achieve net income over costs in excess of 6 million dollars over the 20 years, and will own the facilities at that time."

Expected benefits include production of a relatively high value product that has rapid consumer acceptance as opposed to lower valued products whose only outlet is government purchase.

McDonald projected, "Eastern members can expect an eventual termination of marketing reblend deductions, as their milk will not have to be sold at distress prices or manufactured at exorbitant processing charges."

The Leprino Cheese Company, in business since 1950, is presently the nation's largest marketer of mozarella cheese. It has developed and patented several cheese-making procedures that provide the firm with sophisticated technology to achieve better yields and superior product quality.

The Pennsylvania Department of Highways, (PennDOT) hasn't been able to keep up with the thistles this year, as is being evidenced by these pictures taken at the interchange of U.S. Route 30 and Prospect Road in Lancaster County. The thistles are all along the roadsides, median strips, and adjacent to farmers' fields and

Thistles aren't a cash crop

Opinion - by Dieter Krieg

Thistles along Pennylvania's roadsides are more abundant this year than ever before, allegedly because the state doesn't have the funds to keep the noxious weeds under control

But the obvious question that must be asked is

If the Pennsylvania Department of Transportation (PennDOT) is claiming that it has insufficient funds to build and repair roads, plow snow in the Winter and keep weeds mowed in the Summer, then what in the world are they doing with all of our money?

The sight of thistles along the Keystone State's roads is not only an eyesore for everyone passing by, they're a nuisance to farmers and anyone trying to keep a weed-free garden or lawn.

Farmers try very hard to have clean fields, knowing that yields can be cut drastically if the weeds are left to go out of control They pay dearly for their efforts with many hours of hard work and a sizable portion of whatever money is left over after taxes. But those tax dollars don't

appear to be getting the job dne at PennDOT.

There are laws on the books which call for local enforcement of the noxious weed control act. But it is seldomly enforced, according to Lyle Forer of the Pennsylvania Department of Agriculture. Fines, payable to the local school districts, are involved, says Forer

A spokesman in PennDOT's division for roadside environment says they're aware of the problem, but can't keep up because of a shortage of manpower and money, and general opposition to spraying programs. Nonetheless, the spokesman said roadsides would be sprayed. Unfortunately, it will be too late for areas such as shown on pages 20 and 21, where the thistle seeds were floating in the wind to near and far.

According to a news release from State Senator Kenneth Brandt which arrived here Friday morning, PennDOT is laying off workers, but all of the attorneys for land acquisition are still at their desks.

Considering how many acres of land have been purchased for the purpose of building highways, and yet those same strips of land are now just ribbons of weeds, we must question the necessity of those attorneys. That is, unless, they're planning on mowing weeds.

One needn't go to the intersection of U.S. Route 30 and Prospect Road, Lancaster County, to find an abundance of thistles, They're all over the Keystone State. It's a situation which can best be described with one word: disgusting.

There's nothing Nellie and Walter Laird like better than to look at Black Angus cattle.

Walter Laird

(Continued from Page 1)

The tall and lean York Countian is also very much of a beef promoter. Despite the recent meager years in the cattle business, and the discouraging presidential directive on cattle imports last month, Laird is aiming fur a bullish cattle market. He believes every farmer who sells cattle, including slaughter dairy cattle, should shoulder the responsibilities of promotional and advertising work.

With the beef referendum of a year ago unexpectedly coming up for reconsideration, Laird is hopeful of passage this time. The veteran cattleman claims that farmers, particularly dairymen, weren't well enough informed about it last year. The measure which would allow cattlemen to make small, voluntary deductions at points of sale in order to collect money for advertising purposes, is up before Congress now. Laird ppints cut that it is not a government program and that the farmers who sell slaughter animals will have control of the procedures and collected funds.

Says Laird: "I didn't think it would come up again so soon, so we must do some campaigning for it. We must

Raspberries hurt by hard Winter

LITITZ – The raspberry season this Summer was good, considering the rough Winter last year, growers report. Although many of the farmers reported that they lost some of the canes through the freezing weather, the crop that grew looked rather nice.

Glenn Rence, from the Herr Fruit Farms, stated that he thought the raspberries were pretty good considering the weather. He said that there was some damage to the canes in areas of the raspberry patches, but called the season average. He thought the pickers would be out in the field for another ten days to two weeks.

He related that there were no real problems with the berries, they being of a good size and free of any disease or insect problems.

From the Elizabethtown area, Mrs. Levi Ober, speaking for her husband told that they had a lot of canes frozen during the Winter in their acre of raspberries She estimated that up to about ⅓ of the crop may have been destroyed. Otherwise, she too, had no problems to relate, saying that this was the third week of picking in the patch, with the berries looking good.

Mrs. Eugene Garber, from Manheim, stated that there had been cane loss in her husband's raspberry patch too. She told that the black raspberries that grew, however, looked good, being a real nice size.

She said that they had only had to water the patch once, that the weather and rain had cooperated nicely in the patch to create the large tasty berries. She thought the season would soon be ending in their patch, with maybe one more good picking ahead

From the Millersville area, Fred Funk, representing the Amos. H. Funk Farm Market told that they had had an excellent black raspberry crop with little cane damage. However, the red raspberries were only expected to be about ¼ of their normal capacity due to the number of canes which were frozen out and didn't produce. He thought that the black raspberry season was over but added that the red raspberries would be in limited supply for about one week to ten days yet.

Franklin Co. Fair set

CHAMBERSBURG – With the Franklin County Fair less than two months away, the fair premium books are being distributed. These books containing the official entry blank will be mailed to all of last years exhibitors. In addition, fair premium books will be placed in stores, banks, and places of business thru-out the county for easy pick up for those who do receive them by mail. Also, a supply of premuim books will be available at the County Extension Office.

The 1978 Franklin County Fair, which officially opens August 21, will again show expanded exhibitor classes and new features for this year. The premium list show 14 departments bre[illegible]g down into over 500 classes of entries. New events include dairy goats, youth horse show, FFA market swine show, a flea market and antique show, 4-wheel drive pull, and a barnyard olympics.

Last year $14,000 in premiums were payed out to local exhibitors in the various events of the 1977 Fair. In addition, ribbons and trophies were also presented.

The 1978 Franklin County Fair will again open with a Vesper Service on August 20 and run through August 26 at the Fair Grounds along the Warm Spring Road at the Chambersburg Rod & Gun Club Farm.

Walter Laird

(Continued from Page 22)

advertise our own product, no one else will. We must have money for research to play down those accusations about cholesterol, cancer, etc. We must have money to tell the news media and the public about the efficiencies of meat production and healthful qualities of good meat in the diet."

One of the points Laird would like to make with consumers is that cattle aren't gobbling up grains in quantities which would have a negative effect on food supplies throughout the world. Although he feeds very little grain in his own operation, he considers grain for cattle to be of value.

Another point he would like to make concerns prices. "I hear a lot of people moan about the cost of food these days. Sure it is going up, but so is everything else, yet the producer is getting less than he was a few years ago. Our production costs have gone up. At the same time the consumer can buy more groceries for an hour of labor than he ever could before. But newscasters don't report that and how our costs and the costs of labor have skyrocketed. But let the price of beef go up, and watch out."

President Carter's decision to import beef and thereby cool the price of beef doesn't sit well with Laird. He believes the President made the move in response to his low standings in opinion polls, figuring that beef imports would look good to consumers while the minority group of farmers wouldn't mean much in opinion polls anyway.

In these days of much talk about $2.00 hamburger, Laird doesn't believe it's anywhere in the near future. Acknowledging the fact that more and more hamburger is being taken from carcasses, the York Countian says if demand for hamburger continues to increase, slaughterhouses will just "gring up the whole carcass."

Although some consumer attitudes and government decisions bother him, he loves his work enough to want to stay with it. "Every once in a while I joke to my wife about selling out and living in comfort somewhere," he grinned. His wife, the former Nellie Warehime of Dillsburg, confirms that a life away from their farm and Angus cattle would be unsatisfactory.

The Lairds own 189 acres, of which 150 is cleared. All of it is in pasture and hay. In addition, they rent 60 acres and make hay on the halves at another 70, which which gives them a total of more than 300 acres to keep after during this time of year. They hire no outside help, claiming that it has become too expensive and that they don't want to have to bother with governmental regulations.

The Laird Angus herd consists of 65 cows and as many calves. They also keep 20 replacement heifers and two bulls on hand.

Auto Service Tips

Check automobile battery periodically It is the source of electric current you need to get started Check it yourself or have it done at each gasoline stop Add water, preferably distilled, as needed, keep cable connections clean and tight

Thistles

(Continued from Page 21)

Lack of funds seems to be the reason we get for everything that government can't do. But they sure are getting plenty of funds, as we all know.

Again, we must ask, what in the world is being done with our tax dollars?

According to Forer, it is up to local authorities to enforce the weed laws. The fines collected as a result of enforcement of the law are to be turned over to the local school districts, says Forer.

I guess that explains why the law isn't being enforced. Maybe the local authorities figure the state hasn't got the money. If they could get their fines collected, the schools around the country would certainly be well funded. But in order to get it they'd have to take it from us hard-working taxpayers. Now, wouldn't that make sense. First we have to pay to get a job done, and then we might have to pay for fines for the jobs that didn't get done.

The crews employed by our transportation department have never had the reputation for being hard workers. That, along with apparent mismanagent of funds is probably what's causing our roads to go to pot and our thistles to go to seed.

One final paragraph of advice for the PennDOT people would be:

If you folks can't take care of it (the land), then please don't buy it in the first place. Thistles are not considered to be a cash crop. So please mow, instead of leaving it grow.

Farm Bureau Conference speakers named

MEMPHIS – Earl Butz and Allan Grant head an impressive roster of speakers and instructors who will participate in an all-state American Farm Bureau Federation conference here July 24 to 28. Nearly 500 state Farm Bureau and AFBF staff members will attend the meetings.

Butz is former Secretary of Agriculture and Grant is AFBF president. News conferences have been scheduled for both during the week-long sessions.

Another speaker for whom a news conference will also be held is Leo J. Shapiro whose firm has just completed a nationwide survey of consumer awareness and attitudes toward farm and national issues. News conferences are open to all media.

Other prominent speakers on the program include Charles B. Shuman, former AFBF president; Richard W. Ownes, AFBF chief administrator and secretary; and Dr. G. Thomas Fisher of the University of New Hampshire.

Nationally known authorities in management motivation, self improvement, and volunteer work will conduct seminars or workshop sessions throughout the week. The conference is designed to improve the skills and professionalism of Farm Bureau staff members.

Wide gap spark plugs are best for many autos today because of leaner fuels Some plugs are "hotter" than others A hot plug is best for city driving, a colder plug more suited to highway and turnpike driving If your engine is old, use hotter plug

Egg prices

(Continued from Page 1)

pullets of laying age is expected to decline this Fall below the levels of a year ago. It is expected to remain below the 1978 levels in early 1979. However the increased chick hatches of late May will push the bird numbers back to 1978 levels by March of 1979 if producers don't limit the hatches over the next few months.

According to the UEP, the May hatch figures show an increase of two per cent over 1978 and June is expected to show a ten per cent increase in the number of chicks hatched over the year before.

The UEP advises watching slaughter figures in the coming months, stating that currently the figure is running four per cent less than the same time last year. It appears, they state, that during the last egg price drop a large number of layers were molted, thus, they reason, that it can be anticipated that a larger than expected increase in eggs will be available in late August and September.

A. Kermit Birth, from the poultry marketing at Penn State, stated that he sees a seasonal improvement in the egg market, in fact, he thought some of it can be felt already.

Part of this, he thought, is due to the number of fewer pullets being available, and that will continue to improve up to next Spring, he believed. But he said that prices would really depend on the reaction of producers to the situation.

There have been fewer pullets available as replacements, he explained, and their have been cutbacks in the number of hens removed from the laying houses. Hens are being kept longer for laying. Furthermore, he stated, that if the prices of eggs does improve, even more hens will be kept.

There has also been an increase in the number of eggs per layer, he added, with a higher proportion of pullets currently giving a higher rate of lay.

So, thinking over the entire situation, but stating that this was only his ideas, Birth related that he thought prices will improve seasonably, and expects the first quarter of next year will average above the prices of this year.

Mel Gehman, representing R.W. Sauder Co., of Lititz, stated that now it looks like the prices will probably stay the same over the next few months, with slight improvements, though he added that no one knew for sure what prices would be.

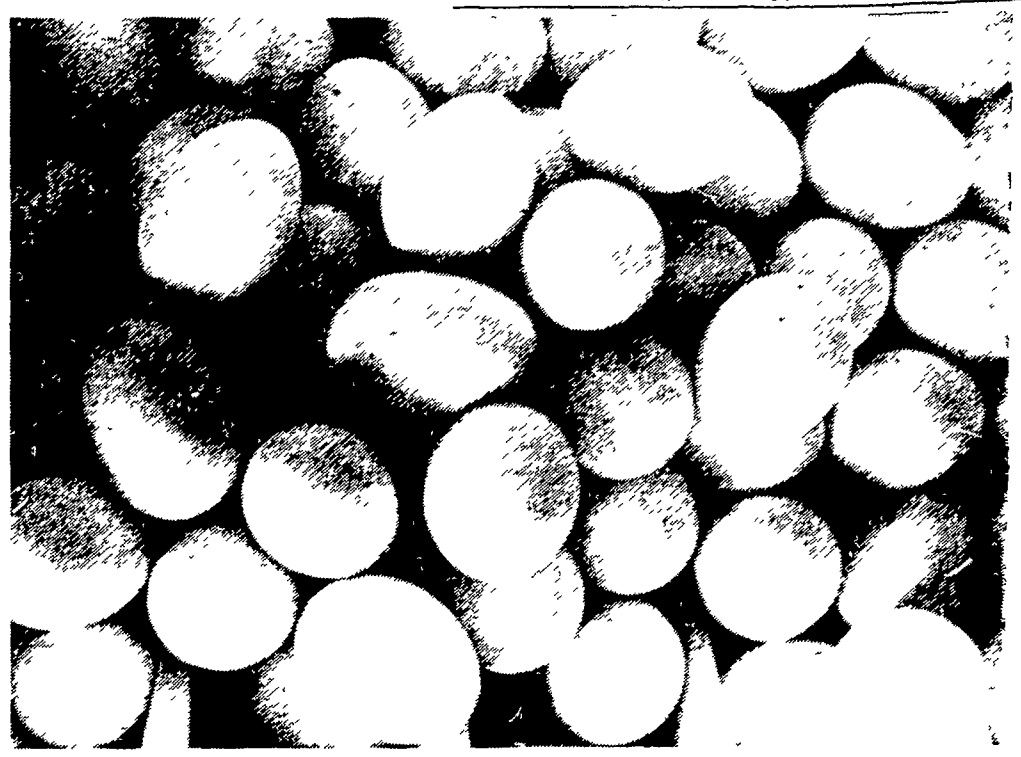
He stated that the higher price of red meat would be a good influence on the price of eggs, consumers using more eggs for their protein value.

Also, he noted that some of the local flocks had been liquidated and moved off earlier, also influencing slightly the price.

At the moment, he sees the larger egg demand firm, but the smaller egg market not so firm. This is possibly due to the fact theat the warmer weather creates a larger supply of the smaller eggs.

Considering prices in the

(Turn to Page 28)



Nobody knows what egg prices will be in the future, but producers are hoping for an upwards trend.

Talmadge reports farm economy has improved

WASHINGTON, D.C. - U.S. Senator Herman E. Talmadge (D-Ga.), chairman of the Senate Committee on Agriculture, Nutrition, and Forestry, said recently that the Nation's farm economy has undergone "marked improvement" from the near-disastrous conditions of last Fall and Winter that triggered a nation-wide farmer protest.

But he warned against reading the encouraging signs "entirely through rose-colored glasses" and said "serious problem areas remain in American agriculture that cannot lightly be wished away."

In a speech to the National Association of Farmer Elected Committeemen — an organization of U.S.D.A. local officials — Talmadge cited higher farm prices and larger than anticipated exports as key reasons for the improved farm economic outlook.

While encouraged by these developments, the Georgia Democrat declared: "We still are confronted by bulging stocks of grains and cotton - including the largest wheat carryover since 1963. Favorable weather and growing conditions, in this country and world-wide, would result in another bumper harvest.

"If this occurs, we are likely to see a reversal of the recent upward trend in prices and a recurrence of last summer and fall's disastrously low levels.

"The economic consequences of two bad years back-to-back would be truly foreboding. Untold numbers of additional farmers would find themselves with their backs to the wall.

"The overall economy, which already is losing steam, could well be pushed into a full-blown depression."

Talmadge said that the Agricultural Act of 1977, while farm from perfect, was a "step in the right direction for providing some measure of income protection to farmers while assuring an ample supply of food and fiber at reasonable prices."

He said the 1978 crop year would provide an adequate test of the effectiveness of the new law.

On other farm matters, Talmadge predicted that Congress will give final approval within the next several days to major new farm credit legislation that was recently agreed to by a House-Senate Conference Committee. He said the bill would "overhaul and update" existing credit problems of the Farmers Home Administration and will authorize a new $4 billion emergency credit program for farmers and ranchers hit by economic disaster.

"This bill is the most significant and far-reaching farm credit legislation to come before Congress during my two decades in the Senate," Talmadge said.

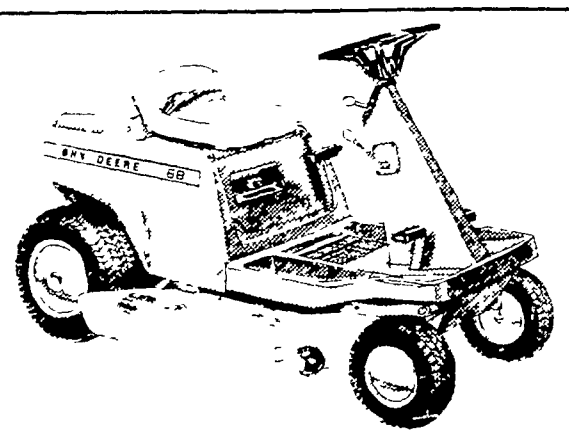
Egg Prices

(Continued from Page 27)

future, he stated that the hatches for June were higher and it seems that the total number of hens is coming back nationwide is coming back. He thought that the future prices will depend a great deal on the hatches during the months of July and August.

An egg processor from Lancaster County who chose not to be identified stated that it has been his past experience that egg production traditionally goes down in the Summer due to the influence of the hot weather. And when the total number of eggs go down, the price will go up.

Thinking about the Fall months, he noted that the use of eggs ususally picks up then, due to the increased use of eggs for holiday baking, etc. But he said that egg prices really could be anybody's guess, because no one could actually tell what the market prices would be.



8-hp Riding Mowers

The John Deere 68 Rider has an enclosed engine for a really quiet ride Color-coded controls are clustered for easy use In-line 5-speed transmission lets you shift on the go A safety switch automatically shuts off the engine if you leave the seat with mower or transmission engaged Triple-safety starting Nonslip footrests Two mowers—30 and 34 inches—are available

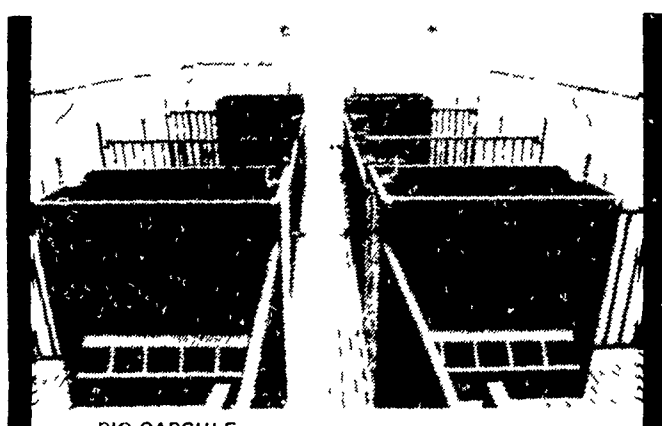
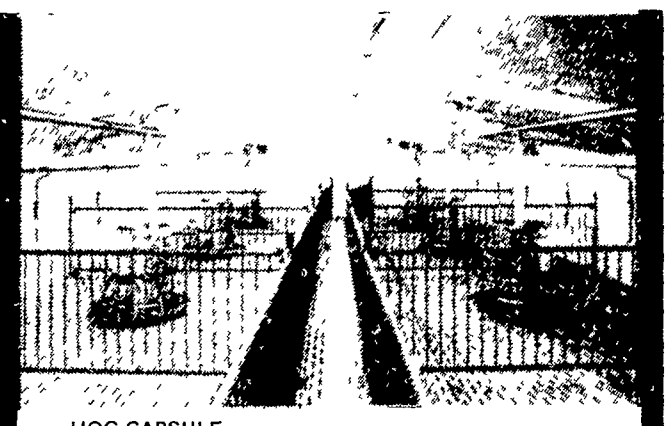
Make plans for a swine confinement building that is right for your operation.

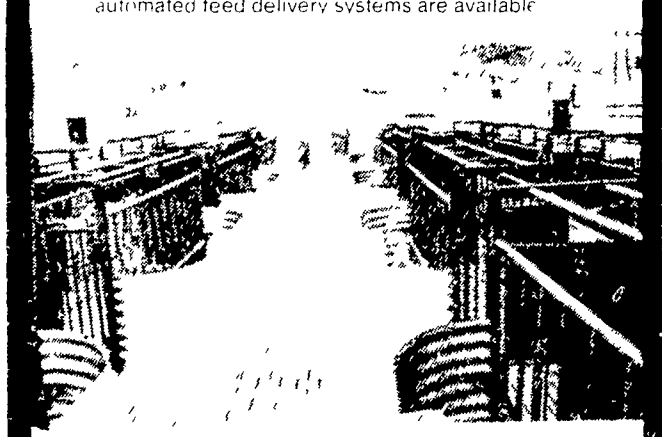
What an AG Best Capsule will do for you
• Provide uniform air distribution No drafts • Provide 2 environments within one environment for sows and pigs • Reduce feed wastage and cost • Reduce your labor and time • Reduce stress to a minimum • Provide comfort for the operator • Provide heavy insulation for less energy use • Provide all the tools needed for good management
There are many Pig Capsule models for farrowing, growing and finishing So plan on a building that is made right to do the right job for you



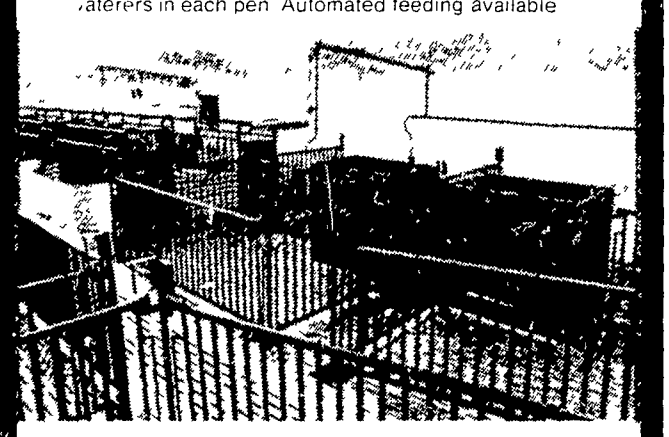
PIG CAPSULE
A controlled environment that can save more pigs There are models with 8 to 20 pens equipped with partitions feeders nipple waterers and slatted floors Nursery pens and growing pens and automated feed delivery systems are available



HOG CAPSULE
Clean dry and comfortable hogs can gain faster on minimum feed have less disease and are more profitable 8 or 10 pen models have vertical steel tube partitions a rotary feeder and 2 nipple waterers in each pen Automated feeding available

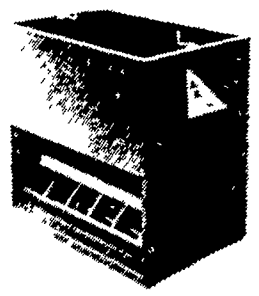


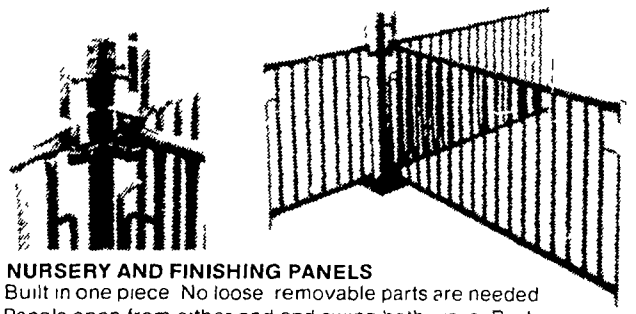
SOW CAPSULE
A healthy environment that helps wean more pigs per litter and cuts down on the labor needed to do the job There are models with 4 to 24 farrowing stalls that have built-in feeders watering cups and easily adjustable side panels



SOW-PIG CAPSULE
A good farrowing system for medium or small operations A farrowing building is combined with pig nursery pens You have choices of models from 4 farrowing stalls with 2 nursery pens to 16 stalls and 8 pens

The Ag Best nursery feeder has an expanded throat that helps eliminate packing and bridging An easy top adjustment regulates feed flow A step back feeder design keeps manure from dropping in the trough Five partitioned feeding spaces on each side Capacity is 11 bushels Construction is 14-gauge welded steel





NURSERY AND FINISHING PANELS
Built in one piece No loose removable parts are needed Panels open from either end and swing both ways Posts have a unique latch with pull and twist action for instant release or positive catch (patent pending)

Stormy weather slows crop development

HARRISBURG – State Agriculture Secretary Kent D. Shelhamer said today that crop development is still behind last year's progress as a result of stormy humid and wet weather in the week ending July 10. According to the Pennsylvania Crop Reporting Service, soil moisture is now rated as adequate statewide with some areas reporting surplus.

Harvesting of strawberries and sweet cherries is nearly complete. Some harvesting is also reported for tart cherries, green peas, snapbeans and early cabbage. Pears and apples are sizing well, with some areas reporting tasseling. Tomatoes are progressing very well but a few reports of early blight are coming from southern counties. Japanese beetles are active, especially on cherries.

Corn is now rated 22 inches high throughout the state. This is six days behind the 34 inches for this date last year. The crop is 16 inches in the north, 23 inches in central counties and 28 inches in the south. Crop condition is reported good with excellent color.

Tobacco is now virtually all transplanted, a completion date on week behind last year. The crop is reported in good condition and growing well.

Soybeans and potatoes are both in good condition. Beans vary from two to 10 inches high across the state. Potatoes are in full blossom and sizing well.

Barley is now 32 per cent ripe and 24 per cent combined, about six days behind the 50 per cent combined a year ago. Harvest is less than five per cent completed in the north, 21 per cent in central counties and 49 per cent completed in the south. Wheat is 65 per cent turning and eight per cent ripe, about eight days behind 40 per cent ripe last year. The crop is less than five per cent ripe in the north, six per cent in central counties and 16 per cent in the south. A few fields have been combined in southern areas. Oats are 82 per cent headed and less than five per cent turning, about seven days behind the one-quarter turning last year. The crop is six per cent turning in southern counties and less than five per cent in both the northern and central counties.

Alfalfa first cutting stands at 93 per cent, three days behind the completion date last year. Alfalfa second cutting is reported at 18 per cent, the same as last week and one week behind the 30 per cent cut last year. Clotim is four-fifths cut the first time, nine days behind the 87 per cent of last year. The overall quality of hay for the week was rated fair to good by commonwealth farmers.

Pastures continue to provide average amounts of feed.

4-H County Council lists future plans

LANCASTER -- The reorganizational meeting of the Lancaster County 4-H County Council was held June 21 at the Farm and Home Center in Lancaster.

New officers were elected. They include: Sarah Brubaker and Jay Stauffer, co-presidents; Jody Henkel, secretary; Jim Stauffer, treasurer; Mike Bukowski, news reporter; and Karen Hostetter and Cindy Risser, recreation leaders.

Members discussed the upcoming exchange trip with the Canadian 4-H'ers. Over 40 members will be travelling from the Chateanquay Valley in Southern Quebec and arrive in Lancaster on July 15, staying until July 22.

Members will be staying in the homes of Lancaster Co. 4-H members.

The next meeting of County Council will be on July 21, at 7:30 p.m., at the Farm and Home Center. After the meeting, there will be a dance, from 9 p.m. until 1 a.m.

Grain acreage drops

WASHINGTON, D.C. — The nation's corn acreage for 1978 is seen as the lowest since 1975, according to survey information released last week by the United States Department of Agriculture. At 78.7 million acres, the predicted acreage is down five per cent from a year ago.

Oats plantings are reported to be at their lowest level in more than 100 years, the crop statisticians revealed. Only 16.4 million acres have been planted in oats, and only 12 million acres of that total is expected to be harvested. That's the lowest since 1872.

Also down are plantings of sorghum, barley, and wheat. The total wheat crop is expected to be about 11 per cent below last year's level and the lowest since 1973.

The soybean acreage is seen at 64.3 million acres, up nine per cent over a year ago and at a record high for the second year in a row.

State loan program for farmers is explained

HARRISBURG, June 20 - State Rep. Noah W. Wenger, R-Lancaster, reports that a measure to promote agricultural development by means of a State-guaranteed loan program for farmers received House approval on June 20. The Bill is now in the Senate. Both Houses, however, are in adjournment until Sept. 11.

The measure, House Bill 104, would establish an Agricultural Development Authority with the power to guarantee local bank loans up to a total of $200,000 for land, equipment and stock for farming.

Wenger, who was a member of a special subcommittee which studied the creation of the proposed Authority, said he believes the financial assistance program will offer farmers without resources the chance to begin or expand their operations, while incurring very little financial risk for the State.

The legislation stipulates that to be eligible for a loan the applicant would have to be a Pennsylvania resident with sufficient education, training and experience to participate in the type of farming operation for which the loan is made. Also, the applicant would have to participate in an accepted farm management program for the term of the loan. Anyone with a net worth in excess of $50,000 would not qualify.

Wenger explained that the loans would be made through local banks, with the Authority guaranteeing up to 90 per cent of a loan not exceeding $150,000 for farm land and an additional loan not exceeding $50,000 for equipment, stock or supplies.

According to the measure, the Authority could assist in paying a portion of the interest on the loan if the interest is too high for the borrower to meet. However, the borrower would have to repay the state at the termination of the loan.

"Young farmers especially can benefit from this program," Wenger said. "Those of us involved in agriculture know the high cost of getting started. This measure can help young people in obtaining the capital necessary to begin a farming enterprise.

"The average age of farmers today is between 52 and 58. Young people are turning away from farming not because they are not interested, but because many of them do not have the money to make a go of a farming operation. House Bill 104 offers those interested in agriculture a chance to fulfill their ambitions. By the same token, it could help to revitalize agriculture in Pennsylvania," Wenger said.

"Industry has had the Pennsylvania Industrial Development Authority for years to offer a low-interest loan program for commercial enterprises. Agriculture, as the Commonwealth's second largest 'industry,' also deserves a program to stimulate agricultural development in the State. The creation of an Agricultural Development Authority would be a significant step in promoting and supporting Pennsylvania farming."

Grant requests that OSHA be disbanded

WASHINGTON, D.C. - An immediate one-year moratorium on new federal regulations has been demanded by the nation's largest general farm organization.

In requesting the moratorium, American Farm Bureau Federation President Allan Grant said the result would be "a significant brake on inflation." Grant added, "It would assist the President in his discussions at the Economic Summit in Bonn. It would assist Ambassador Strauss in trade negotiations in Geneva, and it would help stabilize the dollar."

Grant said Farm Bureau recognizes that real success in controlling inflation will come only with an end to federal deficit spending, but cited the moratorium as an immediate action to bring immediate results.

He noted that, Dr. Barry P. Bosworth, director of the Council on Wage and Price Stability, has estimated that additional regulations coming up for action by federal agencies could cost U.S. businesses and consumers $35 billion dollars. In addition, he estimated the regulations could impose capital costs of $60 billion for equipment, construction and engineering.

Grant said more than $4.5 billion will be spent in 1978 on federal regulatory activities. Every dollar spent by federal agencies in the regulation process causes business and industry to spend an additional $20. This means at least a $90 billion outlay, even without the imposition of new regulations.

For an immediate, major savings, Grant asked the Occupational Safety and Health Administration be disbanded.

Grant said, "If, as suspected, the operation of OSHA has brought about no significant decrease in agricultural and industrial accidents, we ask that OSHA be eliminated and the responsibility for safety and health be returned to local authorities."

Brian Bankert shows top hog at York County 4-H Swine Round-up

STEWARTSTOWN -- Eleven-year-old Brian Bankert of Hanover, already a four-year veteran of 4-H competition, took the grand champion honors at Monday's York County Swine Roundup.

Hatfield Packing Company of Hatfield, Pa., purchased the winning 235-pound purebred Duroc gilt for $1.75 per pound during the evening sale at Sechrist Sales, where the roundup was held.

Young Brian, the son of Mr. and Mrs. Roger Bankert, has captured four previous grand champion ribbons through 4-H competition. He owns three brood sows and is raising five gilts and barrows for later competition at upcoming area shows

The reserve champion placing went to Gus Parlett, son of Mr and Mrs James Parlett, Airville R2. His purebred Chester White gilt also sold to Hatfield Packing Company, which paid $1.25 per pound to the 9-year-old winner, in his first year of 4-H project work

Kenny Sunday of York exhibited the winning champion pair Hatfield Packing Company purchased the duo for 50 cents per pound The reserve champion pair was owned by Brian Utz, Hanover, and went to York Livestock Market for the final bid of 52 cents per pound

Forty hogs were entered in the show, judged by purebred swine breeder Frank Feeser of Taneytown, Md.

Other buyers of the top placing animals included Ralph Thomas of Shrewsbury and Aberdeen Sales of Maryland

Other class winners in the swine show weight categories included Melissa Trostle, Red Lion, Steve Trostle, Red Lion, Gary Burgard, East Berlin, and Chris Sunday, York.

Champion fitter was Ronald Wilson of Delta, with Melissa Trostle, Red Lion, capturing the reserve fitting ribbon. Steve Trostle of Red Lion was selected top fitter in the 14 and older division.

Melissa Trostle, Red Lion, and Brian Bankert, Hanover, were named the champion and reserve showmen after winning the first and second place in the 8- [illegible] age category Mike [illegible]gard of East Berlin won [illegible] showmanship award in [illegible] 12 and 13 age division, [illegible] John Mummert, Seven [illegible]ys, took the top spot in th[illegible] 14 and older division

Gus Parlett, left, won reserve champion honors with a gilt that sold to Hatfield Packing Company for $1.25 per pound. Bob Sechrist, right, represented the buyers.

Hatfield Packing Company, represented by Bob Sechrist of Sechrist Sales, Fawn Grove, paid $1.75 for this champion gilt exhibited by Brian Bankert.

"Silence is the mother of truth" Benjamin Disraeli

Michelangelo carved his famous statue of David from a marble block on which another sculptor had started work

Dairy princess training seminar to be held on July 17 to 19

HARRISBURG – The 1978 Pennsylvania Dairy Princess Training Seminar will be held July 17 to 19 at Elizabethtown College, Elizabethtown, Pa The purpose of the seminar is to train some sixty dairy princesses and alternates for their reign, also to inform over 40 local milk promotion committee people of their responsibilities to operate a successful local program

Mrs. Mim Kauffman, seminar coordinator, stated that "the participants will attend a series of workshops on nutrition, public speaking, poise, haircare, television techniques, plus many more, to accomplish their objective" Special sessions are also planned for the adults on local milk promotion activities

The 43 local dairy princess winners will compete for the State title on September 27 and 28 in Harrisburg

A special guest at the Training Seminar will be the current Pa. Dairy Princess, Sandy Miller from Berks County

Last year, 39 local princesses representing 44 counties, participated and competed for the State title

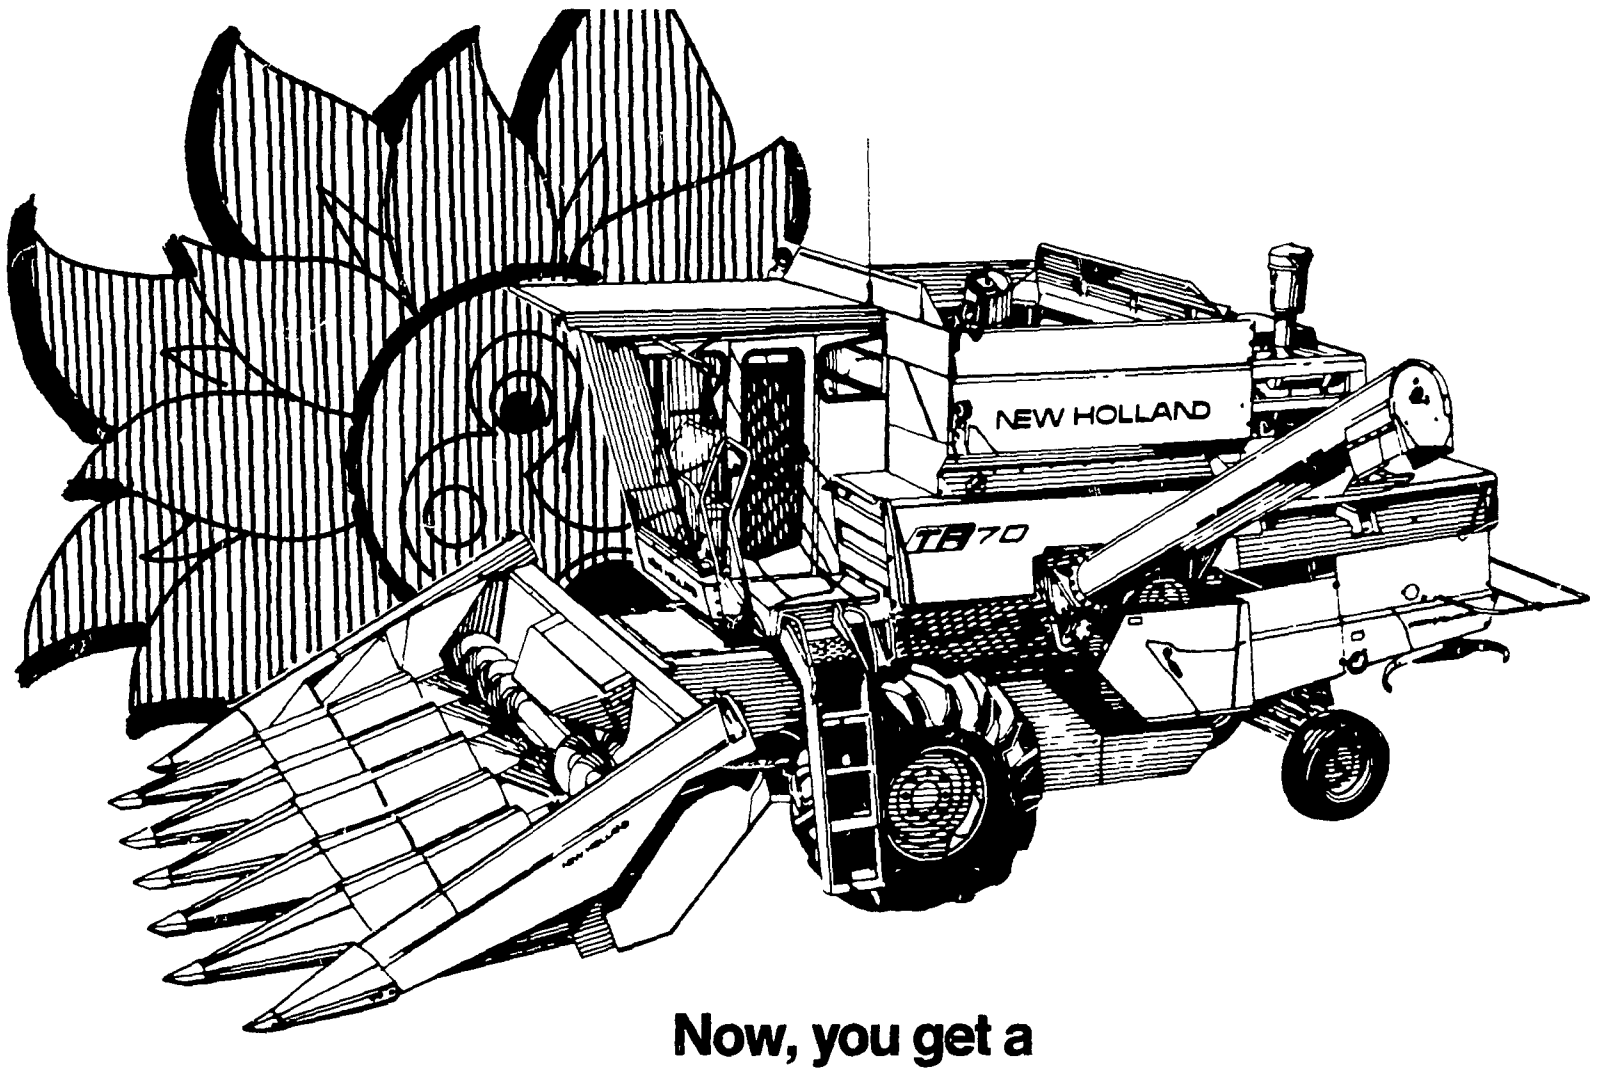
The Biggest News in the Combine Business is ***EVEN BIGGER NOW!***



Now, you get a

FREE AIR CONDITIONER*

(Retail value over $1,000)

when you buy a TR™ 70 Twin Rotor™ combine.

It's all yours—a cool ride in the hottest new combine in the business—the amazing Twin-Rotor TR70! And cool comfort is only *one* of the benefits of combining the Twin Rotor way

You'll see the other advantages where it counts most—in the grain tank Less grain loss less grain damage and the kind of clean sample you'll be proud to say you grew and harvested

We're making this special limited-time FREE AIR CONDITIONER offer for two reasons—one, to say "thanks" for the tremendous acceptance of the world's first true rotary combine, and, two, we want *more* people to discover Twin-Rotor performance

See us for full details Offer ends August 31, 1978

*(*If you prefer, you can choose a free electronic monitoring system instead of the air conditioner Same conditions and time limits apply)*

We're the experts in grain harvesting!

Find your nearest Sperry New Holland dealer on the facing page. Ask him for a TR-70 demonstration on your farm.

SPERRY NEW HOLLAND

Harvest survey predicts less corn

HARRISBURG – Pennsylvania Agriculture Secretary Kent Shelhamer says farmers in the state will harvest less corn, oats and winter wheat this year than in 1977. Shelhamer noted that according to a survey by the Pennsylvania Crop Reporting Service, soybeans, tobacco and barley show no change from last year, and the only crops to increase in acres to be harvested are all hay and rye (based on conditions as of June 1).

Acres estimated to be harvested in Pennsylvania and the per cent of change from 1977 are as follows: rye, 13,000 acres, up eight per cent; all hay, 1,935,000 acres, up one per cent; barley, 125,000 acres, unchanged; tobacco, 13,500 acres, unchanged; soybeans, 67,000 acres, unchanged; corn, 1,120,000 acres, down three per cent; oats, 340,000 acres, down three per cent; and winter wheat, 245,000 acres, down nine per cent.

Estimated U.S. harvest of corn, oats, barley, tobacco and winter wheat will be less this year than last year. The acres of rye, soybeans and all hay to be harvested will increase from last year. Soybean planted acreage is estimated at a record high 64.3 million acres, up nine per cent.

Acres to be harvested and the per cent of change from 1977 are as follows: rye, 1,070,000 acres, up 54 per cent; soybeans, 63,178,000 acres, up nine percent; all hay, 61,254,000 acres, up one percent; tobacco, 945,320 acres, down one per cent; corn, 68,184,000 acres, down three per cent; barley, 9,116,000, down four per cent; oats, 11,951,000, down 11 per cent; and winter wheat, 38,846,000, down 20 per cent.

Fulton Grange meets

QUARRYVILLE – Fulton Grange 66 met at their hall, Oakryn, July 10 with the Master, Edward L Zug, presiding. The Grange went on record in favor of legislation which would require states to enforce the weight limit on trucks on interstate highways under a penalty of a ten per cent reduction in federal highway funds.

The tour committee reported the tour to Niagara Falls and Canada will leave Quarryville at 6:30 a.m. August 4 and return August 6. Many scenic places will be visited.

The youth committee is planning a swimming party for all the Grange families to be held at the home of Mr. and Mrs. Earle Gilbert, Fort Deposit, Md., on July 28, at 7 p.m.

The Lecturer, Mrs. William Rhoades, presented a program with the theme, "Happy Birthday America"

The Grange will hold their annual picnic on the Grange Hall grounds July 24, beginning at 7 p.m. Members and their guests should provide place settings, a meat dish, and another dish. The picnic committee will provide rolls, butter and beverage. A memorial program will be held at the August 14 meeting.

On Opening Ovens

Don t open the oven door while foods are being heated The average "peek" can cause the oven to drop between 25 and 75 degrees An oven with a glass door is convenient for checking the progress of your food

Pakistanis visit area farms

By LAUREL SCHAEFFER
Staff Correspondent

HAMBURG - Berks County farmers were the hosts of six Pakistani farm leaders last week during part of a cultural exchange program sponsored by Farmers and World Affairs (FWA), an organization headquartered in Chestertown, Md.

FWA is a non-profit educational organization working primarily in cooperation with farm organizations "To promote peace through mutual understanding, using agriculture as the medium of communication because it is the common denominator of all cultures."

Co-ordinating the visit to Pennsylvania were Mr. and Mrs. Roy O. Christman, Hamburg, R1. As participants in the same program, the Christmans toured Pakistan this past Winter with two other farm couples from other parts of the United States.

Mr. and Mrs. William Grimes, (front) one of several Berks County farm families which opened their homes to visiting agriculturalists from Pakistan, showed a bit of Pennsylvania agriculture to, left to right, Nasser-Ullah Khan Raja, Jane Bates (guide), Sultan Ahmad Bangulzai, Warren Lamm (host), and Masood Akhtar.

The six Pakistanians and their American tour guide, Mrs. Jane Bates of Arlington, Texas, toured farms and agriculturally related industries throughout Berks and surrounding counties. Each of the visitors stayed with a different farm family while in the area.

The guests arrived on July 5 and spent the next several days visiting many different places of interest. Included in their program was a tour of the State Capitol Building and a special dinner held in their honor at Haag's Restaurant, Shartlesville, where they were greeted by State Secretary of Agriculture, Kent Shelhamer. Also greeting the guests were, State Senator Clarence Manbeck, Representative John Davies, and Berks County Commissioner Vernon Schafer, along with other prominent local agriculturists.

The Pakistani farm leaders also toured the Manbeck Poultry processing plant, Fredericksburg; the Hershey Chocolate factory and dairy facilities, New Holland Machine Company, and an Amish home. On Saturday they spent time with their host families and also attended the wedding and reception of Christman's daughter, Sandra, to Richard Kopicz.

Prior to their visit to Pennsylvania, the Pakistanians visited farm families in Florida, California, and Michigan. The experience proved to be educational for all involved, including the host families. William Grimes, one of the hosts, explained how he was skeptical of accepting to be a host at first but is now very glad he did. "It has been a valuable learning experience for me as well as for the guests," he commented, adding he would gladly do it again.

The Pakistanians explained that California agriculture was more similar to their own, especially because of the climatic conditions and types of crops produced. Most farming in Pakistan, one visitor explained, is done with irrigation, as was much of what they saw while they visited the West Coast.

It was noted that Pakistan has the world's largest canal

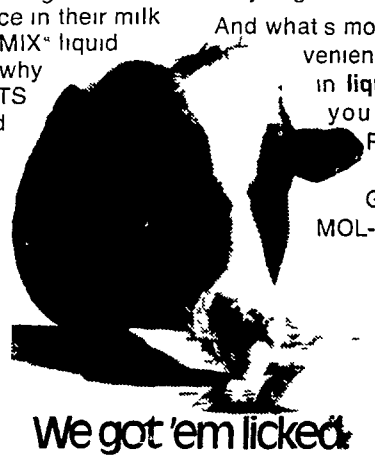
You get more milk production when you use more quality ingredients.

Dairymen all around the country and right around here have discovered a big difference in their milk production when they switched to MOL-MIX® liquid supplements and there's one reason why PERFORMANCE-PROVEN INGREDIENTS like corn distillers solubles, condensed fermented corn extractives, phosphoric acid, and ammonium polyphosphate all quality ingredients that can increase your milk production and yet the very ingredients that many other supplements lack!

And what s more, when you stop to consider the convenience of using a high-quality supplement in **liquid** form, there's only one conclusion you can reach YOU GET MORE MILK PRODUCTION WHEN YOU USE MORE QUALITY INGREDIENTS . . . AND YOU GET MORE QUALITY INGREDIENTS IN MOL-MIX!

Performance-proven ingredients.

Mol-Mix liquid supplements



We got 'em licked.

DER water quality public meeting set

HARRISBURG – A public joint meeting of the Study and Policy Advisory Committees of the Department of Environmental Resources' Comprehensive Water Quality Management Plan will be held at 7 p.m., July 25, at the Holiday East Motor Hotel, Highspire. This is a public meeting and all interested citizens are invited to attend.

At this meeting, representatives from agriculture, industry, environmental groups and concerned citizens will discuss the issues centering around waste load allocations. Waste load allocations are an administrative device to allow DER to determine effluent limitations necessary to protect water quality and assure consistent actions, orderly pollution control and prevention plans and equitable treatment requirements. Currently, DER establishes limits on the amounts of wastes discharged into surface waters to maintain and ensure good water quality. The major issue involves the question; what is equitable treatment among dischargers, with regard to the limits placed on each.

An alternative strategy has been developed by Gannett, Fleming, Corddry, and Carpenter, the study consultant for Study Area 3 and will be presented at this meeting. This area includes Adams, Cumberland, Dauphin, Lancaster, Lebanon, Perry and York counties, and portions of Franklin and Schuylkill counties.

The meeting is sponsored by the Capitol Region Planning and Development Agency in an effort to provide citizens the opportunity to express their opinions regarding waste load allocations.

Further information is available from CRPDA, Harrisburg Host Inn, Suite 125, Harrisburg, Pennsylvania 17111. Telephone 717-939-7827.

4-H judging team wins

YORK – The York County 4-H Horse Judging Team placed first at the Southwest Pennsylvania 4-H Horse Judging Contest held at Montgomery County's 4-H Center on July 10 The team consists of Linda Austin, White Rose 4-H Horse & Pony Club, Jill Kreidler, White Rose 4-H Horse and Pony Club, Kelly Preston, River Hill Trail Riders 4-H Club, Sharon Aldinger, Horse-N-Around 4-H Club. The team's coach is Barbara Hocke, Edgehill Road, York

Individual awards are as follows Linda Austin was third in oral reasons and fourth in overall performances Kelly Preston was fifth in oral reasons and fifth in overall performances Jill Kreidler was second in overall performances Michelle Lehigh, a member of Wellsville Boots and Saddle 4-H Club competed in the Junior Division and was tenth in overall performances.

Lebanon Co. 4-H winners chosen

DILLSBURG – Members of Lebanon County 4-H Clubs were among the winners in the regional 4-H demonstration contest, Thursday at the Northern Area High School in Dillsburg.

Bringing home honors for the county in the senior demonstration were Megan Connor, Annville Little Dutchmen; Elizabeth Shiner, Myerstown Raiders; Kristin Clemens, Happy Mountaineers; and Cindy Gebhard, Happy Mountaineers.

According to Patricia A. Krall, Extension 4-H Agent, these 4-H'ers will have the chance to compete with other Pennsylvania 4-H'ers at State Achievement Days, August 7 to 9 at Penn. State.

Two junior demonstrators also competed. They were: Tamara Paris, Annville Little Dutchmen, and Daniel Shiner, Myerstown 4-H Raiders.

In addition to the demonstration contest, Lebanon 4-H'ers also participated in judging contest practide sessions. 4-H'ers participating were: Bev Hale, Diana Auman, Sandra Hartman, Shannon Johnson, Ken Weaver, Sandra Miller, Carol Cadwallader, Kelly Lauer, Tom Whitman, Jeff Feldescer, Chris McKinny, and Dale Roth.

The teams attended Regional Day in preaparation for State Acheivement Days.

Local 4-H leaders and Extension Agenst from Adams, Cumberland, Dauphin, Franklin, Lancaster, Lebanon, Perry and York Counties officiated for the day's activities.

Order 4 base milk price $10.75

ALEXANDRIA – Market Administrator Joseph D. Shine has announced a June 1978 base milk price of $10.75 per hundredweight for the Middle Atlantic Marketing Order and an excess milk price of $9.10. The weighted average June price is $10.60 and the butterfat differential for the month is 12.3 cents.

The June base milk price increased four cents from May, and is 51 cents above the June 1977 base price. The gross value of all producer milk was $46.9 million. Deductions for the Advertising and Promotion Fund totaled $308.6 thousand in June.

Order No. 4 prices are announced for 3.5 per cent milk f.o.b. plant location within 55 miles of Philadelphia, Pa., and also within 75 miles from the nearer of Washington, D.C. or Baltimore, Md. There is a 6-cent direct-delivery differential applicable to producer milk received at plants located within 55 miles of Philadelphia.

Mr. Shine reported that June producer milk receipts totaled 440.9 million pounds, a decrease of over four per cent from May, on a daily basis. The total number of producers was 7,388 an increase of five over the revised total for May. The average daily delivery per producer was 1,989 pounds compared to 2,072 for May. Class I producer milk accounted for 51.32 per cent of total June producer deliveries compared to 52.04 per cent in May and 54.45 per cent a year ago. Base milk represented 91.39 per cent of total June production.

Middle Atlantic Order pool handlers reported Class I in-area milk disposition of 6.58 million pounds per day during June, a drop of almost six per cent from May after adjustment for variation in calendar composition.

THE TOP TPI BULLS
are At
AMERICAN BREEDERS SERVICE
The Holstein-Friesian Association of America has a way of rating bulls called Total Performance Index (TPI). This system combines a bulls PD for milk and for type to give a total picture of his breeding value. In the Spring 1978 Sire Summary Preview 82 bulls were listed as having a TPI of +200 or higher. The Question was raised, how does ABS rank on TPI? We think very well, thank you; we have 39% of those 82 bulls. Here is a breakdown of the top TPI bulls.
32 bulls +200 TPI at ABS
11 bulls +200 TPI at Select
7 bulls +200 TPI at Eastern
7 bulls +200 TPI at ABC
5 bulls +200 TPI at Curtiss
3 bulls +200 TPI at Sire Power
9 bulls +200 TPI in all other studs
8 bulls +200 TPI are breeder owned
In addition, 25 of the top 82 bulls are +300 TPI, ABS again is in the lead.
8 bulls +300 TPI at ABS
4 bulls +300 TPI at Select
4 bulls +300 TPI at Eastern

ABS AMERICAN BREEDERS SERVICE ®

Pa. second in ice cream production

HARRISBURG – State Agriculture Secretary Kent Shelhamer has released figures which show Pennsylvania ranks second in production of ice cream and third in ice milk production. In releasing the Crop Reporting Service's 1977 annual manufactured dairy products survey, Shelhamer said Pennsylvania manufacturers produced 68.3 million gallons of ice cream, three per cent less than the previous year. Hard frozen ice cream comprised 95 per cent of the ice cream produced in the state.

Ice milk production in 1977 totaled 17.0 million gallons, an increase of six per cent over 1976. However, milk sherbert production at 2.9 million gallons fell five per cent from last year's production. Pennsylvania's production of ice milk during 1977 was the third largest in the nation, while milk sherbert production was the fourth largest. Other frozen products manufactured in Pennsylvania totaled 726,000 gallons, an increase of four per cent over 1976.

Creamery butter production increased to 32.1 million pounds, up 37 per cent from 1976. Creamed cottage cheese production at 48.2 million pounds was up one cent from 1976, while low-fat cottage cheese production at 15.0 million pounds was up 13 per cent.

Pennsylvania's total production of cheese in 1977, excluding cottage cheese, totaled 93.7 million pounds, an increase of seven per cent over the previous year. Mozzarella production at 23.8 million pounds was up 38 per cent, while other types of Italian cheese with 11.8 million pounds produced in 1977 showed a decrease of one per cent from 1976. Total American cheese production was 36.2 million pounds, down two percent from the previous year.

Production of dry and condensed milk in 1977 and the changes from 1976 were: condensed, whole unsweetened, 33.5 million pounds, down ten per cent; condensed, skim unsweetened, 51.5 million pounds, up three per cent; non-fat dry milk for human food, 23.1 million pounds, up 13 per cent.

During 1977 a total of 2,841 million pounds of whole milk was used in manufactured dairy products in Pennsylvania. Of this total, 36 per cent was used for frozen products, 24 per cent for butter, 24 per cent for cheese, and 16 per cent for other milk products.

Total cheese production in the nation, excluding cottage cheese, was a record high 3.36 billion pounds, exceeding the 1976 record of 3.32 billion pounds. Frozen dairy products totaled 1.18 billion gallons, down one per cent from the 1.19 billion gallons in 1976 and four per cent below the record 1975 output.

Manufactured dairy products used 55.7 per cent of the milk marketed in the United States during 1977, up slightly from the 55.1 per cent in 1976. Whole milk used for cheese production required 43 per cent of all milk used for manufactured dairy products, down one percentage point from last year. Butter accounted for 33 per cent of the total whole milk used for all products during 1977, compared with 30 per cent a year earlier.

4-H land use seminar held

READING – "Conflict in Berks County" is the title of the new 4-H Land Use Seminar for teenagers that was held the evenings of July 11, 12, and 13 at the Berks County Agricultural Center. The land use sessions were part of the new 4-H Public Affairs Leadership Program unveiled this Spring by the Berks County Cooperative Extension Service of Penn State.

Ms. Barbara Stratton, Extension Assistant coordinating the program, explained, "Our overall goal was to interest teenagers in local government and community issues. The land use dilemma is very relevant to all Berks County residents. We hope to explore with teens what land use study entails, what the issues are in Berks County, and how teens can have input into land use decisions."

Part of the three evening program will include instruction for teenagers on how to debate. The final evening teens will utilize those skills to debate a current land use question.

"Land use decisions really boil down to basic value questions; the need for growth on the hand, versus the need to preserve our natural wealth on the other."

James Davis, Extension Assistant for Land Use presented major portions of the program.

Broiler placements up

HARRISBURG -- Placements of broiler chicks in the commonwealth during the week ending July 1 were 12 per cent more than a week ago, according to the Pennsylvania Crop Reporting Service.

The placements totaled 2,164,000, three per cent more than the previous week. Average placements during the past ten weeks were 11 per cent above a year earlier.

Placements of broiler chicks in the 21 poultry-producing states were 76,617,000, about the same as the previous week but eight per cent more than the same week a year ago.

Average placements of broiler chicks in the 21 poultry-producing states during the past ten weeks were seven per cent above a year ago.

The number of broiler-fryers slaughtered in Pennsylvania under federal inspection in the week ending June 21 were 1,937,000 with an average weight of 3.76 pounds.

Concert set

MT. GRETNA – The sixth concert in the Music at Gretna series will feature Elizabeth Irvin-Kolker, soprano, and Jane Marvine, English horn, this Saturday, July 15, at 8 p.m. in Chautauqua Playhouse in Mt. Gretna.

Also appearing on Saturday evening's program will be Konrad Owens, clarinet, Carl Ellenberger, flute, Timothy Carter, double bass, and Erica Ellenberger, piano. Tickets are available at the door; $3 for adults, $1 for students.

Pakistanis

(Continued from Page 35)

irrigation system and also the largest earth filled dam, which is used to supply hydro-power and irrigation water.

Coming from a different province of Pakistan, another visitor said Florida was more like his area, where he primarily grows bananas.

Other major differences which were noted included the high level of mechanization of American agriculture as compared to Pakistan. This was attributed to the large abundance of cheap hand labor in their homeland, but, explained one Pakistani farm leader, it is not uncommon to see large modern machinery and laborers working in neighboring fields, contrasting ancient traditional methods with modern technology.

The establishment of rice crops is another major difference. In Pakistan, rice is transplanted, usually by hand, while it is seeded in the United States.

After departing from Pennsylvania, the Pakistani farm leaders returned to Washington, D.C., where their visit officially commenced. While there they were to report on their travels and visit the Pakistani Embassy.

The Berks County hosts and their respective guests were as follows. The Christman's were the hosts of Abdul Rehman Baloch, a prominent farmer noted for his pioneering efforts in banana growing in the lower Sind province of Pakistan. He also raises mangoes, chikoos, guavas, onions, and other vegetables.

Stanley Christman, Hamburg R2, was the host of Safdar Mohammad Durrani, a 78 year old progressive farmer of the North West Frontier of Pakistan where he grows fruit as well as sugarcane, sugarbeets, and tobacco. Safdar also makes raw brown sugar with an electrically operated cane crusher.

William Grimes, Shartlesville, hosted Naseer-Ullah Khan Raja, a member of the Zamindar family of Azad Kashmir. He raises primarily rice and maize and is interested in horticulture.

Serving as host to Sultan Ahmad Bangulzai was Warren Lamm, Sinking Spring R5. Sultan raises primarily wheat and potatoes and has traveled abroad to many other countries. His farm is irrigated with a tube-well, and he owns a tractor, bullocks, horses and cows.

Ernst O. Miller, Hamburg R2, was the host of Mumtaz Ahmad Malik. Mumtaz raises wheat, cotton and chick-peas and is noted for introducing sugarcane as a new crop to his area. He has mechanized his farming operation and is an agricultural leader in his area.

William Myers, Myerstown, President of the Berks County Farmers Association was the host of Masood Akhtar Malik. He raises wheat, rice, sugarcane, vegetables and mangoes. Masood and Mumtaz both serve as members of the District Advisory Committee on Agriculture.

Joel K. Seaman, Hamburg R1, was the host of the American tour guide, Mrs. Jane Bates.

NEW WAYNE® CALFNIP® MILK REPLACER: IT TAKES THE HASSLE OUT OF REPLACER MIXING.

New formula Wayne Calfnip milk replacer—the best has been made better. It mixes in seconds—every time—and stays mixed. No clogging of nipples, easier cleaning of pails or bottles.

You give your calves the top nutrition which has made Calfnip a leader, without the slow mixing headaches which have been common to milk replacers.

Yet new Calfnip has the all-milk protein which made the name famous, plus an optimum level of fat for energy, vitamins and antibiotics to protect calf health.

It's all possible because of a new selection of ingredients and quality control at the human food level. You simply can't give your little heifers a stronger start towards becoming fast-maturing herd replacements.

SPECIAL FOR FERMENTED COLOSTRUM FEEDERS.

New Wayne Prenip™ is the convenient ready-mixed bovine colostrum preservative you've been looking for. Just add it for consistent results as you store colostrum for young calf feeding.

See your Wayne Feed Dealer for New Calfnip milk replacer and for Prenip bovine colostrum preservative.

Home economist believes in IFYE program

By SALLY BAIR
Staff Writer

GETTYSBURG – Nine young people in Adams County are richer because of encouragement they received from Extension Home Economist Helen Tunison to participate in the International 4-H Youth Exchange program. For her efforts over the years, Helen is being honored with the "Friend of IFYE" award by the Pennsylvania IFYE Alumni Association at their Summer meeting in Bucks County.

Helen's involvement is a natural part of her job, but her interest extends beyond the call of duty. She tells how she feels, "It is an opportunity for people in the county to meet with people from other parts of the world. They gain knowledge of the wide variety of cultures, and I think we all need to recognize that we should share the world's goods and total resources too. Young people learn that each culture is worthwhile and has beauty. There is just not an exclusively 'American' way."

For Helen the IFYE program is "an enriching experience," and she feels she shares in the riches with the IFYE delegates. "Frankly, I haven't traveled much, so it is vicarious travel for me."

Adams County has long boasted a regular stream of young people applying for the IFYE program, and a solid core of enthusiastic IFYE boosters who return and tell their story and encourage others to try the experience. This is not entirely coincidental, and the interest of the county Extension office accounts for a large part of the successful exchange program. Helen explains, "I look over the 4-H'ers as they come along, and long before they think about going, I've thought about who would make a good IFYE."

Counties which sponsor IFYEs need to raise a substantial sum of money to help pay the cost of the exchange; IFYE delegates themselves do not pay. In some years Adams County has had to provide funds for two delegates, but Helen says that is not a problem. "We have had good IFYEs who give good talks when they return. We haven't had any problems raising money." In fact, there is now money in a special account drawing interest so the fund has a headstart when the next 4-H'ers applies.

Of course, Adams County is often host to incoming IFYEs, sometimes with two in the county simultaneously. Through this, Helen has developed some friendships that have been kept up for over a decade. She delights in telling a story about an Indian girl who visited Adams County, whose name she subsequently gave to an acquaintance traveling in India. The Pennsylvania friend experienced a bus breakdown in India, entered a store to find an English-speaking person, met the girl whose name had been given to her and was hosted to a three-week visit in the home and countryside of the IFYE exchangee.

Thinking about the award, Helen says, "I was surprised and pleased, and feel that it is a very worthwhile program."

This is Helen's 21st year in Extension work in Adams County, and in those years she has been a part of many changes. She reflects, "Our work has grown. Now we do a lot of coordinating other teachers, setting up workshops, clinics, or seminars and working in cooperation with other agencies."

There are currently 31 homemakers groups in Adams County, groups which have a strong tradition there, but these are changing. "New groups with young mothers are now meeting in the morning. They say this is the only way they can do it, and they bring their children when they are fresh." A few meet in the afternoon and some still meet in the more traditional nighttime slot.

On the other hand, working women are influencing Extension programs. Helen notes, "When I started it was unusual for women to work away from home. Now fifty per cent of the women in the county are employed away from home. She quickly added, "Many of the people we work with are still employed in the home in a dual role - a homemaker who helps on the farm, or who helps in husband's insurance business. Many wives are piggy-backing on their husband's careers."

Because of the shift, Helen changes programs to accommodate them. "We have more evening workshops, because these working women don't want to miss a workshop." With so many women working it causes some problems: it's hard to get 4-H leaders and parents don't have time to drive the children to 4-H activities.

Program content is changing too. "There is a lot of interest in house plants and in home decorating. Any workshops we offer in drapery, lampshade-making or upholstery get a large attendance." She attributed this to the fact that people really want to improve the appearance of their homes and get individually into them. "They want something original and creative. There is much more interest in quality crafts. Women get a lot of satisfaction in seeing things in their homes which they have made themselves. It offers a form of therapy too."

Changes are being made in the 4-H program too, and Helen notes there is a great upswing in enrollment in non-traditional 4-H projects. "Crafts and design projects are growing, and cooking and sewing are declining. This is probably due to the general interest in crafts which is reflected in greater youth interest. I think it's good, but it's not as basic as learning good food preparation and nutrition."

Even those who opt to take the traditional sewing have changed their approach. "The girls are more style conscious and really take the time to accessorize properly. There is such a wide variety of outfits that when you line up the winners at dress revue there is a complete wardrobe." To accommodate those who wish to go beyond traditional sewing projects, Adams County allows the 4-H'ers to take "advance-a-project," which lets the girls make their project and add a related, self-determined project.

One big change in Helen's job over the years is that the Extension service offices have moved from cramped quarters in the court house to their own quarters in county-owned offices outside Gettysburg. "We were very cramped, and it was very noisy with no parking. Since we need to be able to accommodate people, this is very pleasant and we have privacy and adequate meeting rooms.

Helen, who received an advanced degree in craft work, enjoys crafts and sewing when there is time, and also likes to read. "I always start several projects, some of which help in teaching and some for just personal satisfaction". She is currently working on squares for a machine made log cabin quilt, which she will piece together in the Winter.

He Summer activities are centering around the upcoming marriage of her only daughter LuAnn. She said that she and LuAnn are making bridesmaid dresses and her own dress, but the wedding dress will be purchased. The reception will be on the family farm at Fairfield R1, where Helen lives with LuAnn and her husband John.

The best part of her job, Helen says, is the people. "I meet very fine people, who are warm, friendly, and stimulating. You get to know them through the years and that's a nice aspect of the job. I do enjoy people and I like bringing information to people."

As for the future, Helen gets serious as she predicts, "We will need to continue to be flexible; it is not possible to be the same. Change is characteristic of the times we live in. I think people will have to work at keeping families together. They must restrain personal whims and wishes to keep the family unit together."

This deep personal concern for others is just one of the reasons she was selected as a "Friend of IFYE."

Rug braiding is a traditional craft and one that is enjoying a revival. Helen shows some of the braided rugs she uses in her workshops.

Twice a week, Helen reaches many Adams County homemakers through radio tapes.

Here Helen is seen working with a visual aide on pattern selection. This is one of many which are used in her sewing work.

Farm Women Societies

Berks Co. Society 5

Berks County Farm Women Society 5 held a short business meeting during a family picnic on June 25 at the home of Mrs. Albert Moyer, Lebanon R1. The group had barbequed chicken and a covered dish luncheon followed by homemade ice cream. Fifteen members and their families were present.

During the business meeting it was reported that the group would purchase an item for Berks Heim from the profit earned from the chicken barbeque on April 30.

On June 30, the Society travelled to see the play, "Stop the World, I want to get off" at the Berks Campus Summer Theatre.

The next meeting of the group will be July 24, 7:30 p.m. at the home of Mrs Carl Keener, Womelsdorf R1. Program for the evening will be music

Berks Co. Society 8

The monthly meeting of Berks County Farm Women Society 8 was held at the home of Dottie Hoffman, with 12 members present.

It was announced that the little hoedowners, the Gingham 8, were asked to entertain at the Bavarian Festival Ten members reported on the Spring Rally in Hershey Other members reported on the Berks Heim picnic.

The next meeting will be a fun night, at which the ladies will go bowling in Hamburg.

Lancaster Co. Society 2

Lancaster County Farm Women Society 2 met at the home of Edna Loose, Penryn on July 8. Co-hostess was Anna Shank.

Guest speaker was the Rev. Mrs. John H. Summy, Pastor of Jerusalem United Church of Christ; her topic was "Women of the Bible".

Ladies formed a comb band humming along with different tunes.

President Grace Miller will host a farewell social for husbands and wives of Society 2 honoring Pauline and Ronald Gordley who will be moving to Florida.

Ladies will once again serve food at up-coming September 2 sale of William Fry, Lititz. Ladies will also have a food stand at the sale of Pauline and Ronald Gordley, date to be announced later.

The next meeting will be held at Ruhl's Picnic Grove. Ladies will entertain guests of the Danner Home located in Manheim.

Lancaster Co. Society 19

The annual picnic of Lancaster County Farm Women Society 19 took the form of a pig roast on July 8. Fifty-nine people, including members and their families and friends, met at the Musser Spring House, for a time of fellowship and good food.

Members voted to give $25 to the foster child for a Christmas gift.

Next month, on August 16, the society members will travel to the Harrisburg State Hospital to entertain guests there and provide gifts and refreshments.

Lancaster Co. Society 28

Lancaster County Farm Women Society 28 met at the Farm and Home Center on June 22. Society 17 and the County Officers were entertained at a luncheon meeting.

After lunch, the groups were entertained by Miss Gloria Longenecker who played the piano and sang some songs.

The next meeting place has been changed. The ladies will play miniature golf at the Village Green on July 27, at 7:30 p.m Families are invited to attend

York Co. Society 1

On July 5, the York County Farm Women Society 5 met at the home of Mabel Meads, Long Level. The meeting was opened by president Mrs Pauline Rishel. There were 16 members, two new members, and 2 visitors present.

Mabel Meads showed slides of the garden club, and also pictures of the time the Society served noodle soup to the Children's Home in York.

On September 21, the group will be entertained by Society 33. The place will be Stewartstown, beginning at 6:30 p.m.

The next meeting will be on August 2, at the Rocky Ridge Park. The group will entertain Society 19, beginning at noon.

York Co. Society 12

The June meeting of the York County Farm Women Society 12 was held at the Bethlehem United Methodist Church, near Red Lion. The group observed their annual family picnic with 21 members and 12 guests present.

Mrs. Ray Ewell and her daughter Angela, entertained with vocal and instrumental music.

Mrs. Janet Kohler, president, announced that the York County Farm Women picnic will be held July 26 at the 4-H Center, near Bair.

The next meeting will be hosted by Mrs. Luther Chronister at the New Harmony Presbyterian Church social room, on July 25. Miss Patricia Greek, the York County dairy princess will be the speaker.

York Co. Society 21

The June meeting of York County Farm Women Society 21 was held at the home of Nora Posey, Airville.

The program consisted of readings that pertained to the events and happenings in the month of June. Members told of a funny or unusual situation that happened on their wedding day, and showed their wedding pictures.

During the next meeting, July 19, Society 21 will entertain members from Society 23. The meeting will be held at the Wake Robin Wildlife Sanctuary, Airville, starting at 6 p.m.

York Co. Society 25

On July 5, the York County Farm Women Society 25 met at the home of Deloras Peters. There were 14 members present.

On September 20, the group will take a bus to go to Philadelphia, leaving at 7 a.m. They will visit various places of interest.

Some members are planning to attend the county picnic, scheduled for July 26 at the 4-H Center.

There will be a dinner theatre, sponsored by the County, at Wise Haven. The play shown will be Mousetraps.

The group heard a talk on C.P.R. and basic life support by Tony Abel.

The next meeting will be a family picnic to be held at Goods Park, Columbia.

USDA regulations set for mechanically processed meat

WASHINGTON, D.C. – The U.S. Department of Agriculture has announced standards and labeling requirements for "mechanically processed meat products."

Carol Tucker Foreman, assistant secretary of agriculture for food and consumer services, said "Our action reflects the department's finding that, if accurately labeled and appropriately restricted, 'mechanically processed meat product' meets the safety and labeling requirements of the Federal Meat Inspection Act."

The new regulations become effective July 20. A copy may be obtained from 'Food Safety and Quality Service Information Division, room 1160-S, USDA, Washington, D.C. 20250.

Dairy products up slightly

Per capita use of dairy products is expected to turn slightly higher this year, according to USDA economists Cheese consumption could rise about a pound a person, while butter use will probably hold near year-earlier levels Americans will also put away more lowfat milks in 1978, possibly offsetting a downturn in the use of whole milk Last year, U.S civilians consumed milk and dairy products equivalent to 552 pounds of milk per person, up less than 1 per cent from the year before

On being a farm wife

—And other hazards

By JOYCE BUPP

July has turned the countryside lush, with contour ribbons of green and gold stretching across rural farmlands.

Corn is reaching tall in its quest toward the sun and the blue skies, hiding the brown soil at its feet with broad spreading blades

And over the hillsides, afternoon breezes send wave-like ripples across yellowing fields of barley and wheat

Now the time of the combine has arrived.

These huge grain-harvest machines have fascinated me since I was six and our family moved to a home overlooking the spreading fields of a neighboring dairy farm.

When their big orange combine rumbled up the road each summer, and took its first bites into the ripened stands of heavy-headed grain, we kids parked ourselves on the front bank. There we sat, wide-eyed and enthralled by the spectacle of the harvest machines

Today, the groaning of our green grain-chomping machine still sends chills creeping down my back as it lumbers past the house, trimming low-hanging maple limbs as it passes

Combining is an emotional operation It's the final climax in a symphony of crop growth, orchestrated with sun, rain, soil and wind, written and directed by the Almighty Himself, with man only a bit player in the overall program

It's a time that brings moments of sheer joy and exhultation as bushels of tiny golden grains pour from the unloading spout to be hauled by waiting trucks to storage in newly-cleaned bins

It's a time of frustration as a gear or a bearing cracks, a belt shreds into tatters, or a thousand-dollar tire blows after hitting a broken bottle carelessly tossed into the field by some thoughtless passerby Each precious hour wasted through repair and down-time is a drain on both the harvest yield and the farmer's nerves

But ultimately it's a time of satisfaction. Months of labor and financial investment finally bear a return, reassuring that hungry mouths at home and around the world can be fed, and that the farmer may pay his bills and make plans to plant toward another year

Junior Cooking Edition

In keeping with the Summer months, this week the Junior Cooking Edition offers recipes for punch, salads, salad dressing, and a special raspberry ice cream pie. All are good foods for those busy times during these hot, humid months

Have you sent your favorite recipe in to the Junior Cooking Edition yet? Just write down neatly and accurately all the ingredients needed and all the directions and send it to **Lancaster Farming**, Junior Cooking Edition, Box 366, Lititz, Pa 17543 Don't forget your name, age, address, and phone number.

PUNCH

1 large box of strawberry gelatin
1 large box of raspberry gelatin
1 envelope unsweetened raspberry drink mix
13 oz. frozen lemonade concentrate
1 envelope unsweetened strawberry drink mix
48 oz. pineapple juice
2 quarts ginger ale

Mix gelatin and drink mixes as directed on packages and combine Add prepared lemonade and pineapple juice. Freeze, then remove from freezer. Chop up, then just before serving, add ginger ale.

Thelma Jean Martin
Age 4
Newmanstown, Pa.

xxx

PUNCH

1 large can frozen orange juice
1 small can pineapple juice
1 small can lemonade
6 tea bags in 1 pint boiling water
6 cups granulated sugar
6 quarts water
2 quarts lemon lime soda

Mix ingredients and serve cold

Michelle Hurst
Denver, Pa.

xxx

LEMONADE

1 lemon
2 cups water
4 tablespoons granulated sugar

Extract lemon juice, add sugar and water Stir until dissolved Add chipped ice. Makes one tall glass of fresh lemonade.

xxx

ALABAMA SALAD

1 package lime gelatin
1 cup hot water
½ cup cold water
8 oz. cream cheese
1 cup diced celery
1 cup crushed pineapple (drained)
½ pint whipped cream
½ cup English walnuts - chopped
lettuce leaves

Mix gelatin, hot, and cold water together and let stand until thickened. Whip gelatin and then add cream cheese. Whip again. Fold remaining ingredients into gelatin cheese mixture. Pour into mold, if desired and then serve on lettuce leaves.

Lorrene Newswanger
Age 13
Morgantown, Pa.

xxx

EASY SALAD

1 can fruit cocktail
1 box lemon gelatin
8 oz cream cheese
2 cups whipped cream

Boil fruit cocktail for three minutes Add lemon gelatin Set in refrigerator to set When it starts to become solid, bring it out and add cream cheese and whipped cream. Mold and cool.

Barbara A. Fisher
Age 10
Paradise, Pa.

xxx

HOLIDAY SALAD

4 slices pineapple
½ cup cream cheese
cranberry jelly
English walnuts

Place a pineapple ring on shredded lettuce. On the pineapple, put a heaping teaspoon of cream cheese. Flatten out cheese, place a cranberry jelly star on top. Place a small dot of cheese on top, and in the center of that, add half of an English walnut.

Malinda Esch
Age 8
New Providence, Pa.

xxx

DEVILED EGGS

4 hard cooked eggs
½ teaspoon salt
1/8 teaspoon pepper
¼ teaspoon mustard
2 teaspoons vinegar
1 tablespoon mayonnaise
1 tablespoon cream

Cut eggs in half lengthwise. Remove yolks and mash until smooth. Add other ingredients and mix well. Refill the whites and garnish with paprika or parsley.

Miriam Esh
Age 6
New Providence, Pa.

xxx

SALAD DRESSING

½ cup vinegar
½ cup water
1 cup granulated sugar
2 eggs - well beaten
1 scant tablespoon flour
4 tablespoons mayonnaise
1 teaspoon mustard
salt to taste

Mix ingredients above Boil until thickened. Let cool and keep in refrigerator. Serve cold.

Naomi Fisher
Age 9
Narvon, Pa.

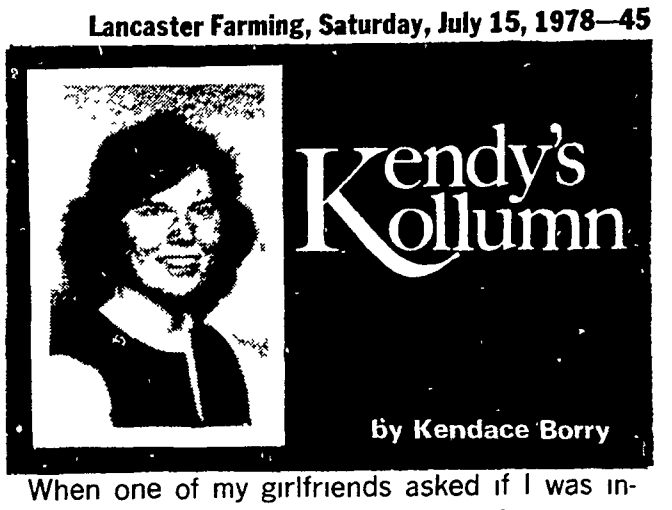
xxx

RASPBERRY ICE CREAM PIE

1 quart fresh raspberries
½ cup granulated sugar
1 package raspberry gelatin
1 quart raspberry or vanilla ice cream
1 baked pie shell

Make gelatin, using 1¼ cup mixture of juice and water. Thoroughly dissolve. Add ice cream cut into small pieces. Stir until melted. Stir in drained raspberries and sugar. Pour into baked pie shell. Chill and serve. May be decorated with whipped cream, if desired.

Gloria Horst
Age 10
Mt. Pleasant Mills, Pa.



When one of my girlfriends asked if I was interested in joining a softball team this Summer, it didn't take her long to get an enthusiastic "yes" answer. While it has been a few rusty years since I retired from my college team, I still retained a fervent love for the game

After, the first mind-shattering practice, I came to the conclusion that that love was the only thing I remembered about softball. Slightly older, I found the ground harder to reach, the bases spaced further apart, and the baseball rougher to hit

Ah, yes, when one tries to act the part of a sports player, one dreams of making great plays and smashing home runs What one gets is sore muscles and a bruised ego

When I get to a game, I fell the excitement bubble up inside me All goes well until someone stands up and reads the roster of the players

If my name is called, there is a sudden lump in the pit of my stomach My knees start to shake and my mind registers fear I urgently ask myself what in the world I am doing here.

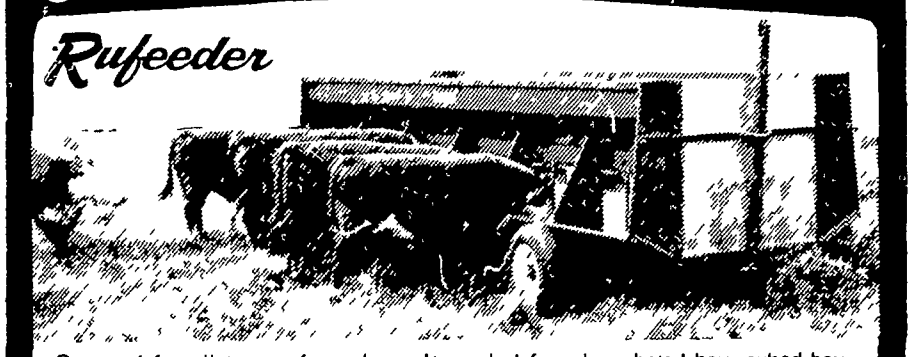
And when the time comes for me to bat, I must literally drag my body to home plate.

But what joy fills my soul if I hear that long, slender piece of wood connect solidly with the cowhide Then my whole life has meaning

Until the next inning

Feterl has a better way to feed roughage...

Rufeeder



Designed for all types of roughage It is ideal for silage, baled hay, cubed hay, ground hay, field green chopping and chaff The new RUFEEDER is 20 feet long, and on a free choice basis can handle approximately 70 head. ●Feed capacity—375 cubic feet ●Mounted on special low profile heavy-duty gear Made of quality steel and treated plywood

When is silage more than silage?
When You've added HY-SI!

HY-SI SILAGE

You'll suddenly have **more than silage** when HY-SI Silage Improver goes to work More lactic acid More cell solubles More energy More TDN Used properly, this exciting product more than pays for itself in **more feeding value** (and that's greater return per acre, to boot!) and produces results like these

	Fresh cut crop Unensiled	Regular silage no additive	More than silage with HY SI
PH	5 7	4 8	4 3
Fat	3 10%	4 02%	5 39%
Lactic acid	23%	3 78%	5 61%
Cell solubles	42 78%	38 81%	46 92%
TDN	64 66%	69 96%	71 51%

Call or write for details today. This is the year to fill your silo with something more than silage!

Home on the Range

Cherries featured for fruit lovers

This week "Home on the Range" is featuring cherry recipes for the fresh fruit lover The following 10 should please all the dessert fanatics in the family

There is still time to send in pear and zucchini recipes, so if you have a favorite using these two ingredients, send them to us at Home on the Range, Lancaster Farming, Box 366, Lititz Pa 17543

CHERRY TORTE

1 tablespoon sugar
1 cup flour
½ cup plus 1 tablespoon margarine
1 envelope whipped topping mix
1 cup powdered sugar
1 (8 oz) package cream cheese
1 can cherry pie filling

Blend together first three ingredients and place in 9 by 9 inch pan Bake at 350 degrees F for 20 minutes Beat envelope whipped topping mix as directions state on the package. In a separate bowl beat powdered sugar and cream cheese Blend whipped topping, powdered sugar, and cream cheese Spread on cooled pastry Chill Spread cherry pie filling on top Cut in squares For a variation, blueberry filling may be used.

CHERRY PUDDING

2 cups pitted cherries
½ cup shortening
1 cup sugar
2 eggs
2½ cups sifted flour
4 teaspoons baking powder
1 cup milk

Cream shortening and sugar and add beaten eggs. Sift together the flour and baking powder and add alternately with the milk Drain the juice from cherries Add cherries to dough. Bake in greased square pans at 350 degrees F. for about 50 to 55 minutes.

Above two recipes by:
Mrs. Carl Bacon
Felton, Pa.

CHERRY CHOCOLATE TORTE

1½ cups graham cracker crumbs
¼ cup sugar
½ cup melted butter
1 package unflavored gelatin
⅔ cup strong coffee
1 package (12 oz.) chocolate bits
6 eggs, separated
3 tablespoons sugar
Sweet cherry glaze (follows this recipe)

Combine first three ingredients and press firmly against the sides and bottom of a nine inch spring form pan Bake at 375 degrees F. for five minutes Cool Soften gelatin in cold coffee Melt chocolate bits over low heat Dissolve gelatin in hot chocolate Beat egg whites until stiff Beat egg yolks until lemon colored, gradually add three tablespoons sugar Add chocolate gelatin mixture to egg yolks Fold in beaten egg whites Pour into crumb shell and refrigerate for several hours Top with Sweet Cherry Glaze

SWEET CHERRY GLAZE

1 can or jar (16 oz) dark or light sweet cherries
2 teaspoons corn starch or clear jell
Few drops red food coloring for light cherries

Drain and pit cherries, reserving ¼ cup syrup Combine ¼ cup reserved syrup and cornstarch Cook, stirring constantly until thickened and clear Top torte with pitted cherries and drizzle glaze on top Garnish with whipped cream if desired

Mrs. Titus Martin
Mertztown, Pa.

MINIATURE CHERRY MUFFINS

4 tablespoons butter
½ cup granulated sugar
1 cup flour
2 tablespoons cherry juice
½ cup brown sugar
2 eggs, separated
½ teaspoon baking powder
Pecans
Cherries
Powdered sugar

Cream butter and sugar Add egg yolks, flour, baking powder, and cherry juice and blend well Fold in stiffly beaten egg whites Butter muffin tins well and sprinkle with chopped pecans over bottom Spoon in one teaspoon batter Place cherry in center and drop another teaspoon batter on top Sprinkle with pecans Bake at 400 degrees F for about 10 minutes Roll muffins in powdered sugar while still hot

UPSIDE DOWN CHERRY CAKE

1 egg
1 cup flour
½ cup hot milk
½ cup sugar
1½ teaspoons baking powder
¼ teaspoon salt
1 or 2 cups fresh cherries
½ cup brown sugar
¼ cup shortening (scant)

Mix batter Make a syrup of ½ cup brown sugar and ¼ cup shortening in a skillet. Boil. Put in bottom of pan. Place batter with cherries on top and bake When taking from oven, turn upside down so syrup is the frosting Serve warm with milk

Above two recipes by:
Mrs. Isaac Weaver
New Holland, Pa.

CHERRY NUT CAKE

2 cups sugar
1 scant cup shortening or butter
6 egg whites or 3 whole eggs
3½ cups cake flour
4 level teaspoons baking powder
½ pint red cherries
Nuts

Drain juice from cherries and add enough milk to make one cup. Cream sugar and butter and beat eggs separately and add If only whites are used, beat and fold in last Then add cherries and nuts Sift dry ingredients and add. Bake in layers in moderate oven for about 25 minutes. Frost with favorite icing

A. Sherman
East Waterford, Pa.

CHERRY SHORTCUT CAKE

1 cup miniature marshmallows
2 cups cherries
1 (3 oz) package cherry gelatin
2¼ cups flour
1½ cups sugar
3 teaspoons salt
1 teaspoon vanilla
1 cup milk
3 eggs
½ cup shortening

Grease the bottom only of a 13 by 9 inch pan Sprinkle marshmallows over bottom of pan Combine cherries and dry gelatin; set aside. In large mixing bowl combine remaining ingredients Blend at low speed until moistened; beat three minutes at medium speed, scraping sides of bowl occasionally. Pour batter evenly over marshmallows Next spread cherry mixture over top of cake Bake at 350 degrees F for 50 minutes.

Miriam S. Zimmerman
New Holland, Pa.

CHERRY FLUFF

22 graham crackers, crushed
⅓ cup melted butter
2 tablespoons brown sugar
32 large marshmallows
½ cup milk
1 cup whipped cream
4 cups miniature marshmallows
1 can cherry pie filling

Crush crackers Save ¼ cup crumbs for top Mix the rest with butter and sugar Put in 9 by 9 inch pan Melt 32 large marshmallows in milk, stirring until melted. Cool Fold in cream and miniature marshmallows Spread half over crumbs in pan. Put in freezer and cool Then spread over this, one can cherry pie filling Spread rest of marshmallow and cream mixture on cherry pie filling and top with rest of crumbs.

Mrs. Paul W. Sauder
Shippensburg, Pa.

FRESH CHERRY COBBLER

1½ cups sugar
3 tablespoons corn starch
4 cups pitted fresh red tart cherries
¼ teaspoon almond extract
1 cup all-purpose flour
1 tablespoon sugar
1½ teaspoons baking powder
½ teaspoon salt
3 tablespoons shortening
½ cup milk

Heat oven to 400 degrees F Blend 1¼ cup sugar and the corn starch in a medium saucepan Stir in cherries and almond extract Cook, stirring constantly, until mixture thickens and boils Boil and stir one minute Pour into ungreased 2-quart casserole Keep fruit mixture hot in oven while preparing biscuit topping Measure flour, 1 tablespoon sugar, the baking powder and salt in bowl Add shortening and milk Cut through shortening six times, mix until dough forms a ball Drop dough by six spoonfuls onto hot fruit Bake 25 to 30 minutes or until biscuit topping is golden brown Serve warm, and if desired, with cream Makes six servings

Mrs. Ruth Ruoss
Blain, Pa.

Ladies Have You Heard?

By Doris Thomas

Lancaster Home Economist

BLANCH VEGETABLES BEFORE FREEZING

I have had many telephone calls this past week asking if it is necessary to blanch vegetables before freezing The answer is yes, if you plan to store them for longer than a few weeks. Blanching improves their keeping quality and also preserves nutrients and color.

The enzymes which make vegetables mature remain active even after vegetables are frozen. If unblanched, vegetables become tough, woody and unappetizing Blanching destroys these enzymes and halts the aging process

Do not confuse blanching with cooking To blanch, bring about 1 gallon of water to a boil Place one pound of prepared vegetables in a wire basket and lower them into the boiling water Cover and start timing immediately Do not wait for the water to return to a boil before you start timing

As soon as the heating time is up, remove the vegetables from the water and plunge into cold ice water It takes as long to chill the vegetables as it does to blanch them After the vegetables have cooked, drain and package them, leaving the appropriate head space, then seal, label and freeze

If you do not have an up-to-date freezer publication, contact your local County Extension Office Ask for your free copy of Circular 534 - Preparing Food For Your Freezer

VEGETABLES FROM A TO Z FOR OUTDOOR MEALS

Vegetables grow in great variety - from A (asparagus) to Z (zucchini) They are, without a doubt, highest in quality and lowest in price when they are in season, as they are now during the Summer months

This is also the season for barbecues, picnics on the beach, and al fresco dining in general "Campfire vegetables," besides helping to balance your meals nutritionally, can also help your food budget They taste so good that your family may develop a new appreciation for vegetables

Whatever the main dish - hot dogs, hamburgers, steaks or chicken - plan to serve a cooked vegetable or two Individual portions of vegetables may be cooked and served in packets of aluminum foil Or you may cook family-size amounts and let each person help themselves

Two-in-one combos are especially good For example, team summer squash with thinly sliced onion, green peas with small onions, green beans with celery, or cut corn with green peppers

Here's how arrange the prepared fresh vegetables on squares of aluminum foil Use a single thickness of heavy duty foil or a double thickness of regular household foil Add seasonings, salt, pepper and butter or margarine Bring the foil up over the vegetables and seal all the edges to make an envelope Place the packets of vegetables over a hot grill Turn them once or twice to make sure they cook evenly

You will need to allow about half an hour depending on the type of vegetable, the size of the packet, and the heat of the fire

For extra flavor, tuck in a sprig of parsley, celery tops, dried onion or a pinch of fresh or dried herbs

Here is a recipe for Zucchini Casserole that should keep everyone coming back for more

Zucchini Casserole

1 pound ground beef
6 cups thinly sliced zucchini
½ cup bottled barbeque sauce
½ cup soft bread crumbs
¼ cup grated parmesan cheese

In a large skillet, brown ground beef and zucchini slices, stirring frequently, 7 to 10 minutes or until slices are transparent Pour barbeque sauce over zucchini and ground beef and toss until evenly mixed Sprinkle with bread crumbs and then parmesan cheese. Place skillet 5 inches from broiler and broil for 1 to 2 minutes until crumbs are golden brown Serves 4 to 5

HOUSE FOR SALE

Lowe's Complete Package of Quality Materials Lets You Build Your Own Beautiful, Energy-Efficient Homestead® From the Foundation Plate Up.

Construction Labor Costs Not Included.

Not a pre-fab. Not a shell house. Each energy-efficient Homestead® is a complete materials package with which to build the home of the future . . . today . . . on your lot from the foundation plate up. Construction labor costs not included.

Here's How It Works

You furnish the land, labor, and foundation We provide everything else from the inside out And that includes carpet, lighting fixtures, paint — even the doorbell. Quality materials from the foundation plate up. All the materials for your new home will be delivered to the job site as work progresses, so there's no waiting or wasted material.

And It's Energy-Efficient

Low-E means low energy. Our Low-E homes are designed to significantly reduce energy usage over conventionally built homes. You get extra insulation, double-paned windows, extensive caulking, efficient heating & cooling system and other energy saving components. With the price of energy and housing steadily increasing, you owe it to yourself to look into the Low-E.

Bluegrass fiddlers to entertain under full moon

NORRISVILLE, Md. - On Sundays nearest the full moon in June, July, and August enthusiastic audiences gather to witness a bit of true American heritage. On July 16th (that's this Sunday) the 18th Deer Creek Fiddlers Convention will be held about three miles east of here — about 30 miles north of Baltimore. The dates are set near the full moon so that they may be easily remembered or predicted, and since the music lasts into the evening, the meadows will be pleasantly lit my moonlight.

Deer Creek features both bluegrass bands and old time string bands. There are fiddle contests in both the old time and bluegrass categories, also Over $1,300 in cash prizes are awarded at each convention. This year several new prizes have been added, including an entire new category for old time banjo This new prize money has been donated by Baltimore Bluegrass, Inc. located in Baltimore at 5502 Bel Air Road, a focal point for bluegrass activities and supplies.

Just what is a fiddlers convention?

It's usually a challenge to find, being located far off the beaten track in some quiet country area. Write or call Dave Greene (at 500 E. 42nd St., Baltimore 21218 or (301) 435-0967) for a map or follow these directions:

Go south from York, Pennsylvania on I-83 almost to Maryland. Turn left at Exit 1 and proceed east on Route 851 to Stewartstown. Continue on Route 24 into Maryland at which point the Route becomes Route 23. Just beyond Norrisville turn left onto Route 136 (Harkins Road) for one mile to Carea Road. Turn left for one mile to Channell Road; then right onto Channell Road for one mile, cross a small bridge in the bottom of the valley and turn right immediately onto a gravel, dirt, and pothole combination road, which is the convention entrance.

A fiddlers convention is a family picnic. This has several aspects: children are admitted free when with their parents Even if you're 70, there's no charge for you if you bring your parents with you. Without parents the admission is $5 And also a family picnic is not a time for alcohol or illegal items. Bring a picnic supper, blanket and/or lawnchair to enjoy a full day of music. Musicians register at noon; music starts at 2.

A fiddlers convention is a music contest with cash prizes going to the best performers. The bands and individuals are good, and they play their best. As a result there was only one person whose toe did not tap at the last convention (there were 10 bands) and about one-third of the audience tried their own style of stepping, which in itself is a fine sight to see.

Finally when it's all over, you'll know what a fiddlers convention is: the last impromptu jam session on the stage by all the celebrating winners still singing in your head; the little ones asleep in the back seat; you're setting plans for the next convention on August 20th; all your trash picked up and stowed for your home trash disposal, because now you appreciate the land just a little more; you've a few names of new friends and future events, perhaps a guitar teacher or a place to dance: it's a bit of true American heritage: traditional music from the hills and plains with just a little polish for you.

Capital Region 4-H Day may be just so many words to many an adult but to some 4-H'ers this is a big day. It is the day when a decision is made as to whether or not the speech or demonstration, that they've put so much time into, will be judged good enough to go to State 4-H Achievement Days at University Park.

Over the years my children have done a variety of demonstrations on many topics. Some of them were, "Wiring a Bee Frame", "Feeding Pigs", "Building a Calf Pen", or others, such as "French Cooking", "Transplanting Flowers", and "Making an Attractive Salad" This year neither child found time to prepare something for competition. So we figured no one would be going to Capital Days at Dillsburg this year Then came a phone call asking me to be a judge of general demonstrations.

My children say I am a hard-marker as I know what it takes to have a "good" demonstration One needs an interesting topic, readable charts, eye contact with audience, etc. But, I wasn't prepared for the variety of topics that I encountered such as "How to Wear a Milwaukee Brace", "The Whole Tooth" and "Your Hands Tell the Story of Your Health", etc It was quite an informative day

xxx

The other day our beagle yapped and yapped in an unusual manner until I finally stopped picking raspberries and went to investigate. Albeit rather reluctantly, as I was alone at home, (Allen and Philip had gone to a Penn State Alumni luncheon) and I feared some heifers had gotten into the corn and I'd be the only one available to get them into the meadow again.

Buster, our dog, was digging up the ground between his doghouse and the silo and so I checked to see if a kitten had gotten itself into the crevice. Seeing nothing, I moved the house and hoped a snake wouldn't come slithering out It was a surprise to see a small, ugly-looking snapper turtle there. I gingerly carried it into the field as it hissed at me It was easier to take care of than runaway heifers

WHAT'S NEW

HOG HOUSE SLATS

Mahaska Industries is now offering stainless steel hog house slats.

The manufacturer says that these slats retard bacteria, clean easily, and warm quickly, and there are no exposed edges so there's no skin abrasion. There's also longer life, quick installation, and reduced wear and corrosion, proven by ten years of field testing.

More information about Mahaska Stainless Steel slats can be obtained by writing: Mr. Jim Ginaven, Mahaska Industries, Oskaloosa, Iowa.

Tips for contacting legislators given

HARRISBURG – Rep Noah W. Wenger, R-Lancaster, recently urged persons contacting him through the mail to follow a recommended procedure with a personal letter

While urging anyone in the 99th Legislative District with questions about local and state government issues to write, the legislator emphasized the importance of effective communication

"If you want to influence government or get something done, one way to facilitate the procedure is to write a letter to me as your spokesman in state government," Wenger said.

"There is a list of tips on writing letters to not only me as your representative but to other public officials and possibly your congressional representatives"

Wenger said important letter writing procedure points as suggested by the United States Chamber of Commerce include:

Write on your personal or business letterhead, if possible, and sign your name over your typed signature at the end of your message

Be sure your exact return address is on the letter, not just the envelope Envelopes sometimes get thrown away

Identify your subject clearly If you are writing about a proposed law, state the name of the legislation and give the bill number if you know it

State your reason for writing Your own personal experience is your best supporting evidence Explain how the issue would effect you, or your family, business or profession or what effect it could have on your state or community

Avoid stereotyped phrases and sentences that give the appearance of form letters They tend to identify your message as part of an organized pressure campaign and produce little or no results

Be reasonable Don't ask for the impossible. Don't threaten. Don't say "I'll never vote for you unless you do such and such" That will not help your cause; it may even harm it

Consider timing For instance, try to write about a bill while it is in committee Your senators and representatives can usually be more responsive to your appeal at the time rather than later on when the bill has already been approved by a committee. Of course, this is not always the case. Sometimes your legislator may reserve judgement and his vote until he knows how the voters feel.

Thank your legislator if he voted the way you want him to Everybody appreciates a complimentary letter and remembers it On the other hand, if you don't like the way he votes, don't hesitate to let him know He will remember that, too

Rep Wenger can be contacted at 717-787-2353 or his office, P O Box 109, House of Representatives, Main Capitol Building, Harrisburg, Pa 17120

Talking computer will help get parts for Ford tractors

LANCASTER – A talking computer with a vocabulary of more than 100 words is now an operating link in Ford Tractor Operations' new nationwide parts ordering system.

The computer-directed parts ordering system, which uses space-age technology to transmit information, will permit Lancaster Ford Tractor, Inc., 1655 Rohrerstown Rd to "talk" with nine regional depots for fast and efficient parts ordering

Ford Tractor dealers throughout the United States are tying into the system which will be operable nationwide by mid-1978

The Ford order processing computer system is part of one of the most complex industrial communications networks in the world

John Kauffman, parts manager said, "This new space-age system, which uses a satellite in some areas of the country, provides Ford dealers with immediate parts ordering capability and ensures minimum equipment downtime for farmers and contractors"

The new parts ordering system eliminates paperwork, reduces order processing time, and provides immediate information to schedule prompt customer repairs

Employing a portable computer terminal about the size of a small typewriter, the new system permits a dealer to communicate directly with any U S Ford parts depot The computer is programmed to answer dealer inquiries at specific steps in the parts ordering procedure

If a dealer's urgent parts order cannot be filled by the nearest parts depot, the computer immediately redirects the order to another location for shipment - usually the same day

More than 70,000 different parts are needed to provide good service for Ford tractor and equipment owners today Because it would be impossible for an individual dealership to store every part, dealers keep a supply of the most needed parts on hand at all times Ford's new parts order system will provide instant access to the remainder of tractor and equipment parts available at the Company's strategically placed parts depots

"Let us never forget that the cultivation of the earth is the most important labor of man."

have a nice weekend...

THE GREATEST FLY-TRAP EVER!

AS ADVERTISED IN ORGANIC GARDENING

ONLY $2.05

NO POISON — NO INSECTICIDE

ALSO FOR YELLOW JACKETS

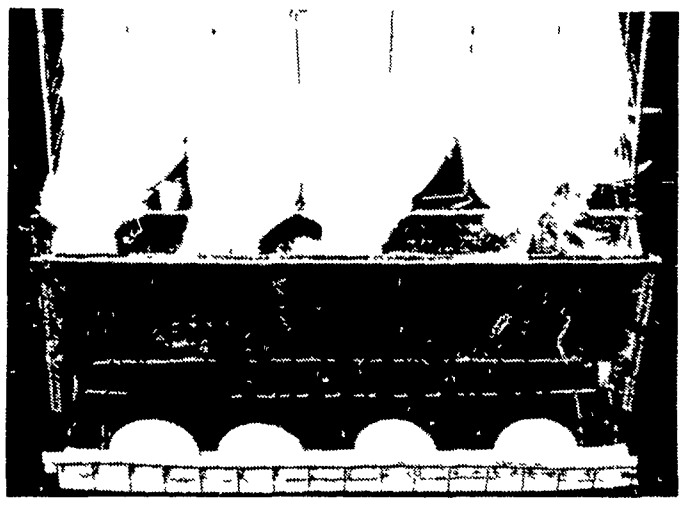
Nothing moves (except the flies trying to get in). This trap fits standard 2¾" canning jars and many others (mayonnaise, pickle, etc) For use around patios, porches, barns, milk houses, dog kennels, chicken houses

The files don't stand a chance. A satisfied customer writes "My mother got two of your fly traps and they're really the greatest. Please send two more. Enclosed is my check" Send check for $2 05 (two for $3.75) plus tax if applicable. GUARANTEED. M&H Mfg. Co., PO Box 46B, Cheyney, Pa. 19319.

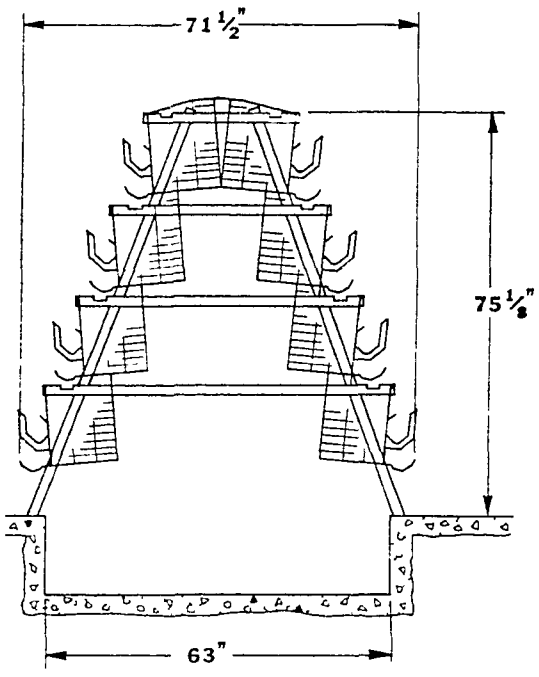
PYRAMID™ CHORE-TIME®

CAGE LAYER SYSTEM

★ LESS BIRD STRESS



The system has been designed for bird **comfort!** Each bird has her place at the feed trough Each has easy access to water Obstruction to light and the flow of air have been greatly reduced, providing more uniform ventilation and lighting for every bird Combined with Chore-Time's automatically controlled air inletting system, you get a layer house environment designed for bird comfort and the resulting better production



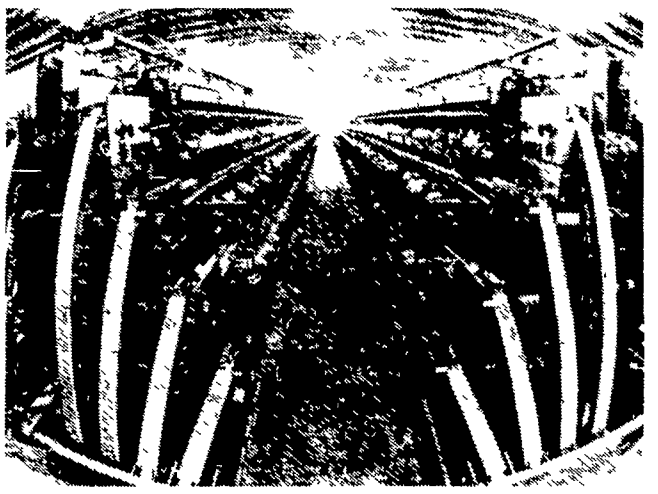
★ NO DROPPING BOARD SCRAPER

It requires **no** dropping boards or scrapers It is available in either three-hi or four-hi models, with the four-hi configuration providing the same bird density per square foot of building space as do conventional three-hi systems, without increasing building costs

★ LESS CHANCE OF CHECKS & CRACKS

With a shallow cage design we were able to reduce the cage slope for more gentle roll-out Eggs don't travel as far to the belt and once on the belt, move single file down the entire cage row They are then transferred, one at a time, into the newly designed Soft Touch II "de-eggscalators" and onto the cross conveyor

★ MINIMIZES FEED WASTE



Not only the physical shape of the feed trough, but the operation of the feeder has been engineered to reduce feed waste The trough shape cuts down on feed loss from "raking" and "billing," while the feeder has been specifically designed for Chore-Time's programmed and performance feeding concept

"PYRAMID . . . AN EGG PRODUCTION SYSTEM DESIGNED FOR A CHANGING INDUSTRY"

Large grain carryover noted

WASHINGTON, D.C. – Stocks of the four feed grains (corn, oats, barley, and sorghum) for this year totaled 87.4 million metric tons, 25 per cent more than last June's 70.2 million metric tons, according to compilations by the Agricultural Stabilization and Conservation Service (ASCS). Increases from last year for individual feed grains were 18 per cent for corn, 88 per cent for oats, 37 per cent for barley, and 62 per cent for sorghum.

June 1, 1978 wheat stocks at 32.0 million metric tons were up 6 per cent from last year. Soybean stocks at 13.6 million metric tons were up 49 per cent from a year ago.

Corn in all storage positions on June 1, 1978 totaled 2.80 billion bushels, 18 per cent above a year earlier, 50 per cent above two years earlier, and the largest June 1 stocks in more than 15 years Farm stocks totaled 1.81 billion bushels and off-farm stocks were 989 million bushels. Disappearance from all storage positions during April and May was 1.04 billion bushels, up 12 per cent from the same period of 1977.

Sorghum grain in all storage positions on June 1, 1978 amounted to 318 million bushels, 62 per cent above a year earlier and 107 per cent above the same date in 1976. Farm stocks totaled 109 million bushels, 78 per cent more than last year while off-farm holdings at 209 million bushels were up 55 per cent. June 1 stocks indicate April-May disappearance at 95 7 million bushels, compared with 100 million bushels in the same period last year

Old crop oat stocks in storage on June 1, 1978 totaled 309 million bushels, 88 per cent above the low June 1, 1977 stocks and 51 per cent above the June 1, 1976 stocks. Farm stocks totaled 256 million bushels and were nearly double the June 1, 1977 farm stocks Off-farm stocks at 53 4 million bushels were up 50 per cent from last year. Disappearance from all storage positions during April and May 1978 was 108 million bushels, up 14 per cent from the 94.1 million bushels for the same period last year.

Hay, did you know?

Often one needs to estimate the weight of hay in one form or another. It's sometimes nice to know for planting how many cubic feet of storage space will be required per ton of hay in various conditions. The following chart will help you do both. It was put together for Armco Steel Corporation's farm products people in Kansas City, Mo. They've been working with farmers for years in supplying baling wire and farm fence products.

Material	Weight Per Cubic Foot in Pounds	Cubic Feet Per Ton
Hay loose in shallow mows	4	512
Hay loose in deep mows	4½	444
Hay baled loose	10+	200
Hay baled tight	25	80
Hay chopped long cut	8	250
Hay chopped short cut	12	167
Straw loose	4	512
Straw baled	12	167

Armco baling wire and farm fence products are available through dealers in most farming areas of the United States.

York Farm Women meet

The York County Farm Women Society announced the dates of their upcoming county picnic. The picnic will be held July 26 at the 4-H Center, near Bair. Each group is asked to bring a $3 gift to be given away as a door prize.

A dinner theater will be held September 1 at Wise Haven. The play will be a musical, "I do, I do". Price of the tickets is $10.

Church night will be October 8, 7 p.m. at the Christ Lutheran Church, Dallastown. Minister is Rev. David R. Barnhart.

The county group is also planning a bus trip to Niagara Falls and Canada for October 22. The trip will last six days.

From the Top

An employer who meant what he said once sent a memo to his staff with the following preface "This is just a suggestion You don't have to follow it unless you want to keep your jobs"

Japanese beetles attacked at Philadelphia airport

PHILADELPHIA - Certain western-bound airplanes flying out of the International Airport, here, will be treated for Japanese beetles, Deputy Assistant Secretary of Agriculture Jerry Hill announced

"Airports are placed in the 'hazardous' category when beetles become numerous and are seen on or about aircraft," Mr. Hill said.

Minute amounts of pesticides registered by the Environmental Protection Agency will be applied to the interior of empty planes to prevent the Japanese beetle from "hitchhiking" to uninfested western states.

Hill said no passengers are aboard during treatment, and all food, water and untensils intended for later use are removed and protective covers are placed in food preparation areas.

Treatments will continue as long as USDA considers the airport to be hazardous, possibly six to eight weeks. Airport grounds may also be treated to reduce the number of flying beetles that create the hazard.

Philadelphia International is the third airport of the 1978 summer season to be declared hazardous. The Greater Cincinnati Airport was so designated on June 26 and McGuire Air Force Base at Wrightstown, N.J., on June 28.

Japanese beetles infest 24 states east of the Mississippi River and St. Louis, Mo. It is a destructive pest that attacks nearly 300 kinds of plants.

Drs. William S. Gardner, Christopher Carroll Barton and Robert J. Munson

Are pleased to announce the formations of a group practice limited to large animal medicine and surgery.

Worms can be costly, salesman warns

LANCASTER — Any farmer with livestock on grass has worms in his animals. That's a fact, according to Dick Forestal, national accounts director for Merck and Company, makers of a deworming product known as "TBZ," a registered name for thiabendazole.

Forestal, who was in Lancaster last week to address a gathering of livestock feed consultants, was very emphatic about his topic. He claims that nine out of 10 herds are affected by worm infestations. He'll argue with anyone on that score and has numerous slides and documented studies to bolster his claims

"You don't see the worms They're too small The largest ones are about the size of the hair on your arm," the marketing specialist exclaimed. "You also don't see the worms because they're in the cow. Only the eggs pass," he added.

According to Forestal, there is no such thing as a worm-free animal. Even a product such as "TBZ" won't rid the animal of worms indefinitely, Forestal said.

To give his audience an idea of how serious a problem worms are or could be, he noted that one dairy cow can pass tens of thousands of worm eggs per day The common determination for worm infestation is known as the EPG count - eggs per gram of fecal matter. An EPG count of two, Forestal noted, would mean the cow passes 27,360 worm eggs per day Emphasizing the consequences if that were true for each cow in a 40, 50, or 100 cow herd, Forestal insisted that productivity of the animal would definitely be affected

The Merck & Co spokesman said the detrimental effects by worms can take place in several ways Two hundred tiny worms for example, can rob a cow of one gallon of blood per month. Both dairy and beef cattle, as well as sheep have been killed by severe worm infestations. "It is serious," Forestal emphasized again and again.

Another way worms can injure the efficiency of livestock is by chewing away the lining of the stomach. The hook work is the culprit With the stomach wall damaged, the farmer might as well be throwing his feed away, Forestal claimed.

To bring the feeling of discomfort that animals might experience closer to home, the Merck representative showed a slide of a mosquito, asking his audience to note that the piercing appendage of the insect is very small. "But it can penetrate through your skin, suck blood and leave you in pain," Forestal reminded his listeners.

"Now, just imagine being bitten by a thousand mosquitos, and you'll have an idea of what the worms can do.

Aiming the major thrust of his talk at the dairy industry, Forestal pointed out that a Wisconsin study has shown that properly wormed cattle will produce $40 worth more milk than cows under identical management and similar genetic potential which weren't dewormed. A North Carolina study has shown even more dramatic production increases: 1000 pounds additinal milk per cow, Forestal claimed.

One worm can lay 10,000 eggs per day, the Merck representative said. The problem is self perpetuating. Involved in the vicious cycle are the host animals, fecal matter, and grass

When feces pass from the cow, the eggs are automatically included. They develop within the moist, warm droppings and eventually the larva find their way up grass stems. Grazing cattle are thus reinfected and the cycle continues.

In order to survive, the tiny eggs and larva must have moisture and warmth. Consequently, the problem is most severe while cows are on pasture.

As explained by the Merck spokesman, the larva are often found in what he calls "the deadly dew drop."

Infestation of a comparatively worm-free herd can be fast. According to Forestal, one cow with a moderate worm problem can infect an entire herd within a month.

Dick Forestal

To help reduce the problem, while at the same time increasing productivity of a farmer's livestock, Merck & Co. and Pennfield Feeds Corporation have developed a program geared to individual animals. Although a program is available for total herd treatments, the emphasis last week was on individual cases. Pennfield calls the program and the product "Day Fresh Dairy Wormer." It is now being made available to dairymen in this area and comes in small, handy packages which the farmer can carry along in his hip pocket.

As the name implies, the newly developed product is designed for use right after calving. Aside from the active drug ingredient (thiabendazole) the product also contains dosages of three vitamins, and a variety of nutritive substances such as dehydrated alfalfa meal, dehulled solvent extracted soybean meal, and dicalcium phosphate.

Ridding livestock of parasites should be a part of management, Forestal advised. Noting that no product will eliminate the problem permanently, he recommends that farmers develop a program or routine. If they don't, they're just wasting feed and potential productivity, he proclaimed.

Foraging workshop set

YORK — A Foraging Workshop, presented by the School of Living, will be held on the weekend of July 21 through July 23, at Deep Run Farm in York, Pa. One can learn how to forage for wild, edible plants and medicinal herbs, and learn the basics of mushroom identification.

Bill Russell, a well known forager from State College, will be the instructor. Bill has had 15 years experience foraging in the northeastern United States and is also familiar with tropical and seashore wildlife.

For more information, one can call 717-755-1561 or write to Foraging, the School of Living, PO Box 3233. York, Pa. 17402. People are urged to register by July 19.

Beverly Garber, the reigning Lancaster County Poultry Queen, extends a personal invitation to all poultry farmers and their families and friends of the industry to attend this year's Lancaster County Poultry Queen Pageant It is to be held at the Farm and Home Center at 7 p.m on August 4

Poultry Queen Pageant slated for August 4

LANCASTER - The Lancaster County Poultry Queen Pageant will be held on Aug 4, at 7 p m. in the Lancaster Farm and Home Center Tickets are available from any director of the Lancaster County Poultry Queen Association or from the Poultry Queen Committee, consisting of Leroy Esbenshade, Manheim, 665-3168, or Paul Hann, Millersville, 872-2667

The present Lancaster County Poultry Queen is Beverly Garber, daughter of Mr and Mrs , James Garber, Mount Joy R2

Highway potholes a problem

NEW YORK, N Y – If you are looking forward to a carefree Summer vacation of travel in your automobile, you may be in for some mighty unpleasant surprises. Such as ruined shock absorbers, busted springs, broken tailpipes, and tires blown by potholes along rough and shattered road surfaces in many areas of the nation's so-called "dream highway" system

This is the warning sounded in the July issue of Popular Mechanics, which details the findings of an exhaustive, first-hand study of conditions throughout the nearly 39,000-mile Interstate highway network, begun in 1956 as the country's most ambitious and costly work project ($100 billion to date).

Some of the key findings include·

With some 3,500 miles of construction still uncompleted, the older roadbeds are wearing out 50 per cent faster than they are being repaired. Nearly one mile in every four already has deteriorated to "fair" condition or worse – and many sections are downright dangerous.

Some Interstates are so filled with cracks, jagged potholes and violent bumps that it is impossible to safely achieve and maintain the 55-mph speed limit. Bridges are especially vulnerable to damage. At present, in fact, states are asking for a colossal $23 billion in federal funds for bridge repairs alone

In general, highway damage is worst in the East and North Roads in the West and South are better. I-80, which runs from New York City to San Francisco, gets the vote of most truckers as "The worst Interstate," especially in reference to its Pennsylvania section.

If the Interstates are to be saved in their present rapid decline toward destruction by neglect – as happened to many railroads -- the Popular Mechanics article declares that Congress must greatly expand a program it started in 1976 under which the Federal Government for the first time agreed to a limited sharing of upkeep costs with the states.

The magazine points out that money for repair and proper maintenance of the superhighways is available -- from the astronomical $32 billion realized annually in the collection of present gasoline and user taxes

Plant lovers' corner

Now is the time to fertilize roses

Now is a good time to give rose bushes another application of fertilizer. Roses are heavy feeders and require three or four fertilizer applications between early April and late July. Apply about 2 pounds of 5-10-10 fertilizer to 100 square feet of rose bed or 2 heaping tablespoonfuls to each plant. Water it in well to avoid burning the roots. Hybrid tea and floribunda roses bloom on new growth while most climbing roses flower on older wood. By applying fertilizer now, you stimulate growth on all types for better flowers either later this year, in the case of hybrid tea or floribunda varieties, or next year for the climbers. A mulch of peat moss, ground corn cobs, chopped sugar cane, cocoa bean hulls, buckwheat hulls, shredded licorice root or other material can be applied following fertilizer to conserve moisture and reduce weed growth in the rose beds.

Fruiting crops need no trimming

FLEMINGTON, N J. – Gardeners sometimes trim leaves from tomato plants and muskmelon plants thinking the fruit will ripen faster if they are exposed to sunlight, say experts.

Vegetable crops which produce fruit must have a good supply of leaves to manufacture the food material that goes into the fruit. The manufacturing process is called photosynthesis and the food produced is sugar.

All materials produced in the plant are derived from photosynthesis and from minerals and water absorbed from the soil. Cutting away foliage destroys the "factory" that produces the fruit

Besides reducing food material for fruit production, removal of leaves exposes the fruit to the direct ray of the sun which results in burning or scorching the fruit

One should remember that the factor responsible for sweetness in muskmelons is the organic sugar produced by the leaves Fewer leaves means less sugar which means less sweetness in the fruit

Charge made at poultry conference

Eggs underpriced by $3.6 million last year

By DIETER KRIEG

LANCASTER — Last year egg producers in the United States sacrificed $3.6 million per week because of what Fred Adams calls an "unequitable and unfair price discovery system."

Adams, the president of Cal-Maine Foods of Jackson, Miss. blames the loss on the activities of the Urner Barry Company and egg farmers themselves "I don't condemn the people who are doing it to us, but I do blame us for not being stronger sellers," Adams told a meeting of Pennsylvania poultrymen last month The occasion was the 1978 Pennsylvania Poultry Conference, held June 22 at the Host Farm Resort, here

A well-known and highly successful poultryman himself, Adams said his estimate of the $3.6 million lost per week is based on a national weekly production of 3 million cases He claims that the allegedly unfair price discovery system, coupled with an erosion of price premiums is the greatest problem in egg marketing today.

An outspoken and authoritative individual, Adams charged that current egg prices are four cents underquoted. "Urner Barry quotes the market as low as possible; they pay more attention to the grocery stores," he told the gathering, adding that "Urner Barry are market makers today, whereas they used to be market reporters."

"It doesn't bother me to lose money, but I hate to lose it unfairly," Adams protested "Low egg prices are tolerable, but not when they're based on unfair criteria

Since Adams visited Lancaster, an orchestrated national effort is underfoot to bring the Urner Barry Company to terms with egg producers across the country An artricle appearing on page 90 of this issue details how The National Egg Company board of directors"has empowered its executive committee to proceed immediately to explore methods of adopting a cartoned egg price discovery system which is truly reflective of supply-demand..."

Mention of an injunction against Urner Barry is made in the story Adams hinted strongly of such action when he visited Lancaster County during the third week of June.

According to Adams, the Urner Barry Company "used to follow the egg market precisely. That means 'pretty close,' he added jokingly. His audience laughed The serious nature of his presentation continued when he explained how the Urner Barry Company used to be on the New York Mercantile Exchange.

Fred Adams

The NYME went out of business in 1970. Since then, the Urner Barry Company has been on its own, and according to Adams, it has virtually ignored true indicators of supply and demand Adams charges further that Urner Barry has no defineable basis for its pricing system Consequently, he explained, the egg industry is studying the possibility of bringing about a court order which would cause the Urner Barry people to go to a different pricing structure.

The Mississippi poultryman also noted that prices of the Egg Clearing House, Inc. (ECI) have been ignored by Urner Barry. He emphasized that poultrymen should lend stronger support to their own marketing activities and faulted egg producers in general for allowing allegedly unfair pricing structures to exist.

"The price they (Urner Barry) quote has no consistent relationship to the trade at ECI or the trade between producers and handlers," Adams told his listeners But despite his difference of opinion with the Urner Barry people, he pointed out that he didn't hold anything against them. Rather, he aimed his thrust for improvements at the poultrymen themselves.

"We are just as guilty as Urner Barry, if not more so," he insisted, "for allowing it to continue." His reasoning stems from the fact that producers are in command of a $3 billion dollar industry, but they're not doing enough in the market place. "Producers have virtually all the equity in the egg industry," he began. "The chain store has less than none," he continued. And the processor has none to a little in most cases."

Considering the egg marketing dilemma, Adams asked the attentive poultrymen: "What can we do about it?"

His answer is for egg producerds to become stronger sellers. He believes cooperative efforts can help.

Adams regards Pennsylvania as being an area which is in a favorable position for expanded and profitable egg production in years to come. He says the state will become an even bigger factor in national egg marketing than it has been in the past. But before those more favorable times arrive, he suggests egg producers work hard to prepare more equitable marketing conditions. He believes the Keystone State can be in an advantageous position because of its closeness to markets throughout the Northeast, Middle Atlantic Region, and portions of the Midwest.

Rabbit course available

UNIVERSITY PARK — One hundred students each year are graduated from the Penn State Correspondence Course 109 on Rabbit Production. A survey of these people indicates they keep rabbits for pets, show, meat, and laboratory animal production.

These people who enroll and complete the course say it enables them to keep rabbits healthier and earn more profit from the business.

Through better management, marketing, nutrition and genetic selection, these people say they can double their net income from rabbits.

This Correspondence Course can be enrolled in by anyone. One simply writes to Box 5000, University Park, Pa. 16802 and asks for details to obtain Correspondence Course 109, Rabbit Production.

Plant disease prevention noted

NEWARK, Del. - Why do some gardens succeed while others fail? Knowledgeable gardeners avoid most disease problems by taking proper preventive measures, says Delaware Extension plant pathologist Robert Mulrooney.

One should allow as much space as possible between plants in the garden or flower bed. Adequate space between rows and between plants allows for good air circulation, permitting the foliage and fruits to dry quickly. Moisture on plant surfaces invites disease. A film of moisture is required for spore germination and penetration and disease development for essentially all fungi (except powdery mildew) and bacteria

Crop rotation is one of the oldest and most effective means of plant disease control. A person should avoid growing successive crops of the same flower or vegetable side by side in the same or successive seasons Successive cropping of the same or closely related plants results in an increase of population levels of pathogens in the soil. Eventually plants are killed or yields and quality of fruits and flowers are reduced significantly

Weeds in and around the garden area should be controlled Weeds serve as hosts for many disease agents, especially viruses, that are easily transmitted to nearby vegetables and flowers

One can emphasize early-season insect control, especially of aphids, thrips, leafhoppers, cucumber beetles, and the corn flea beetle. Aphids, thrips, and leafhoppers carry many viruses that infect garden plants The corn flea beetle spreads the bacteria that causes Stewart's disease, or bacterial wilt Certain leafhoppers transmit the mycoplasma that produces aster yellows, while cucumber beetles transmit bacterial wilt of cucumber, muskemelon, and related crops

Plant disease-resistant varieties should be planted whenever possible — providing these varieties are horticulturally acceptable

One should avoid late afternoon or evening sprinkling so leaves don't remain wet overnight. This practice creates ideal conditions for disease development. Instead, water on a rising temperature during the morning or early afternoon

Severely diseased plants or plant parts should be placed in a paper bag and carefully removed from the garden and thrown in the trash can. One should not leave diseased plants in or near the garden or on the compost pile, since fungal spores can blow long distances, or insects can spread them to garden plants.

A person should keep on hand a sprayer in good working condition and use it to apply fungicide to tomatoes, cucumbers, melons, potatoes, roses, chrysanthemums, and similar crops. If a wettable powder fungicide is used, one can agitate frequently to prevent the material from settling out

Finally, sprayers used for weed control should not be used to apply fungicides and insecticides Mulrooney strongly recommends two sprayers — one for herbicides, the other for fungicides and insecticides.

More colleges are offering courses on futures trading

WASHINGTON, D C. - An increasing number of colleges are teaching courses in futures trading, according to a survey conducted by the Commodity Futures Trading Commission (CFTC).

Gary L Seevers, Commission vice chairman, said the survey shows that at least 45 educators offer college courses focused primarily on futures trading, and 14 plan to offer new courses within the next year A 1975 survey by Loyola University of Chicago found only 36 courses on futures trading

CFTC also found that 175 educators include some coverage of futures trading in other courses for college students, and 52 extension service representatives hold regular marketing training meetings involving futures information, primarily for farmers

Seevers said that college-level educators who receive a Commission newsletter were asked about what was being taught, what visual aids and other marerials are used, and what further assistance might be needed

There were 275 responses from 717 questionnaires

"One factor in the expansion of futures training is the broader spectrum of risk management which futures trading now covers," Seevers said. "Futures are now traded in financial instruments such as Treasury bills and GNMA mortgage-backed certificates, as well as in international currencies. Seventeen of the 45 courses now being taught are in business schools This is a significant addition to the agricultural schools which have long taught the principles of futures trading for agri-business."

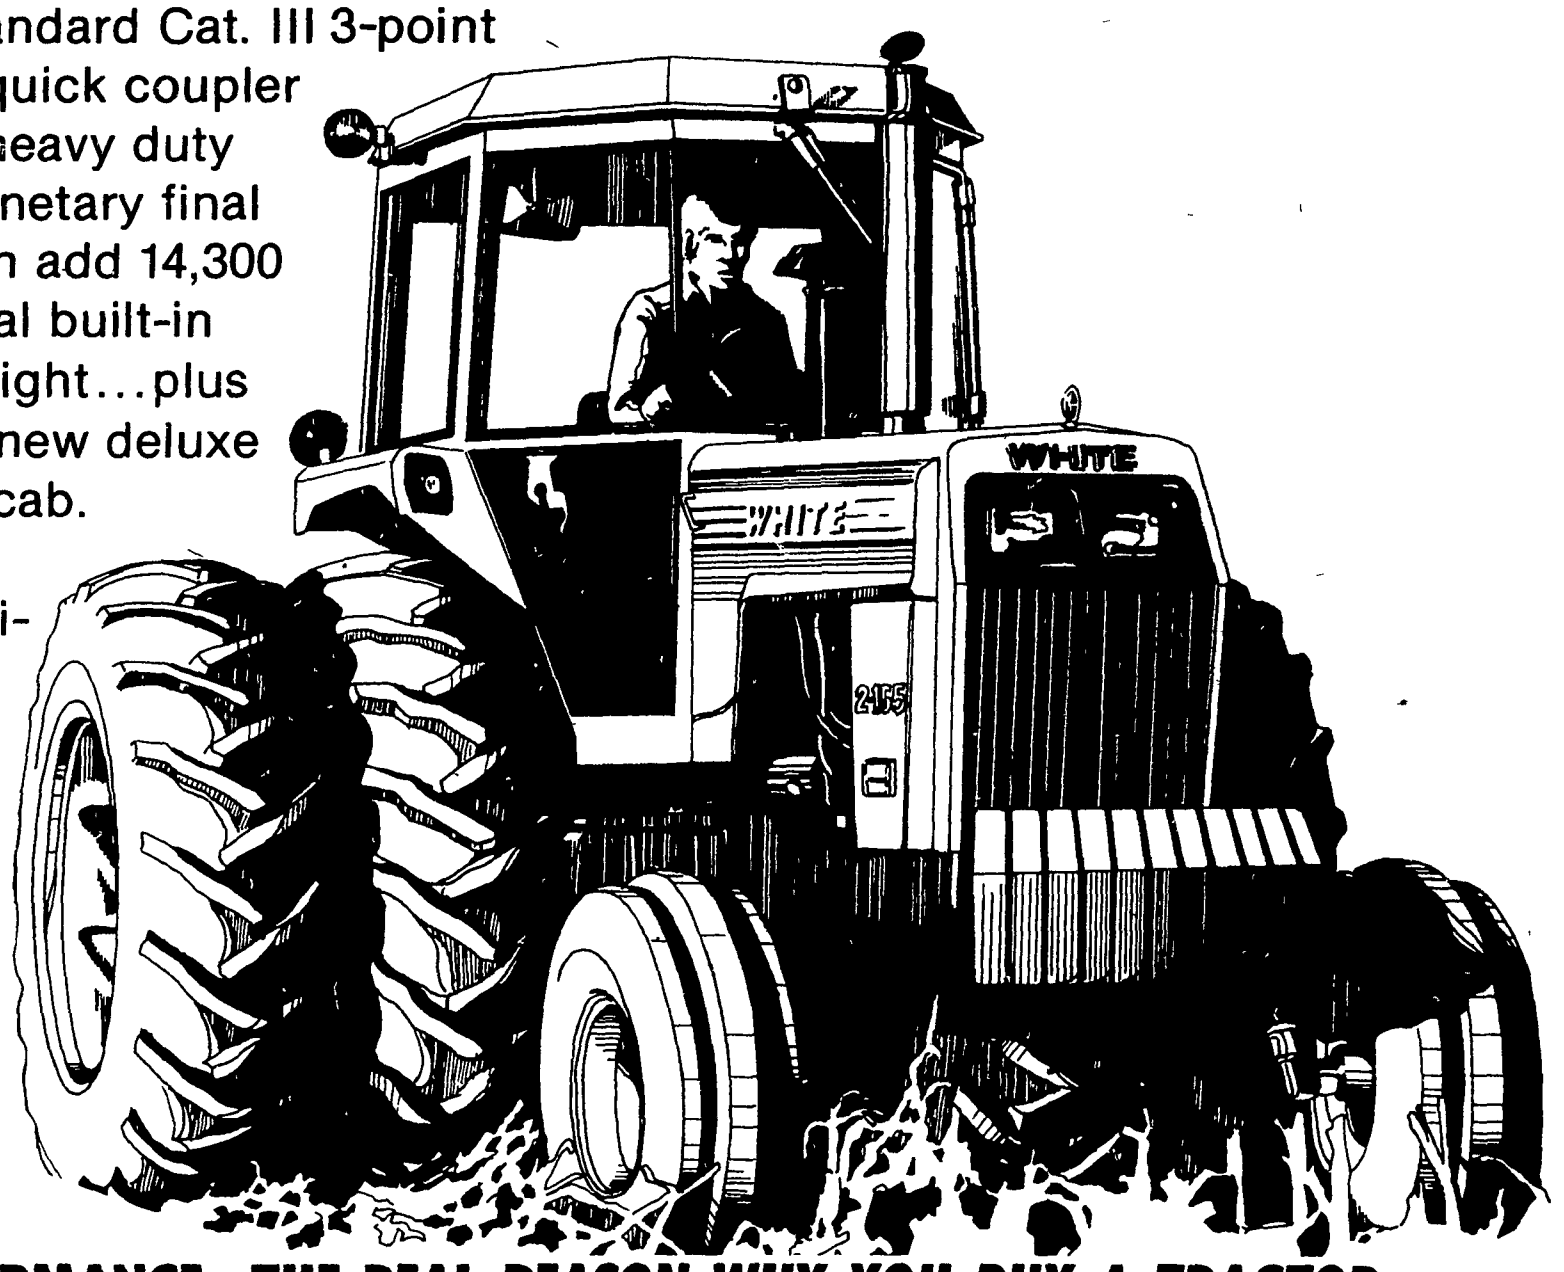
White's 2-155 Field Boss... built-in strength and working features in the 150-160-hp class.

If you're in the market for a big row crop tractor, we invite you to consider the extra built-in strength and working features of a White® 2-155 Field Boss® that some competitors consider options.

White provides you with the largest displacement turbocharged engine in the 150 to 160-hp class. Plus our proven 18-speed 3x6 Over/Under Transmission with 3-speed powershift and 13 working speeds is standard equipment.

More extra value features...standard engage on-the-go differential lock...a standard Cat. III 3-point hitch with quick coupler plus extra heavy duty inboard planetary final drives. Then add 14,300 lbs. of actual built-in working weight...plus a standard new deluxe Field Boss cab.

Measure our competitor's tractor ...by our tractor. See us today.



PERFORMANCE: *THE REAL REASON WHY YOU BUY A TRACTOR.*

Sweet Bulk 'N Flakes®: the stimulator.

There's much more to Sweet Bulk 'N Flakes than flavor. While improving palatability of your dairy feeds, Sweet Bulk 'N Flakes also stimulates the digestive system, adds energy and helps keep calves on feed. The coarse flakes hold high moisture roughage in the rumen for more thorough digestion. Use Sweet Bulk 'N Flakes to increase consumption of less palatable silage or any feedstuff. An excellent feed stimulator for calves, heifers and mature cows.

See us today for Sweet Bulk 'N Flakes.

Urner Barry egg pricing challenged

DECATUR, Ga. - The National Egg Company board of directors has empowered its executive committee to proceed immediately to explore methods of adopting a cartoned egg price discovery system which is truly reflective of supply-demand as shown by actual public trading and to seek an injunction, if necessary, to prevent the Urner Barry organization from making its present cartoned egg quotation. News of the action was printed in the July 7 edition of United Voices, the weekly newsletter of United Egg Producers, (UEP).

In making its decision, the NECO Board was of the opinion that the present U-B quotation is not reflective of supply and demand, that it (the quotation) actually sets the market, and that by making its quotation without basing it on actual public trades the Urner Barry organization has in effect become a market maker rather than a market reporter. If an injunction is sought, it will be to prevent U-B from making its own quotation and will not interfere in any way with U-B's right to report market values based upon supply and demand as shown by public trading, the UEP newsletter stated.

Prior to its decision last Wednesday, the NECO Board was polled to determine whether or not its members had a preference for a market quotation based upon actual public trading or a preference for the present Urner Barry quotation. Although not unanimous, the Board was overwhelming in its preference for a market quotation based upon actual public trades.

The Board action came following three months of legal investigation to determine whether NECO had the basis to file for injunctive relief and three months of study to develop an alternative price discovery system based upon supply and demand. At a NECO Board meeting in Atlanta on June 26, it was reported that there appeared to be legal theory on which to base a lawsuit and that an alternative pricing mechanism based on public trading was available. A decision was made to delay final Board action until last Wednesday to allow members to consider the reports and to allow a decision by the full Board.

Turkey flock course available

UNIVERSITY PARK - Backyard flocks of fewer than 1000 turkeys require close management supervision. Turkeys are fragile to raise because they are difficult to get started on feed at one day of age. Also young turkeys are sensitive to variation in temperature and must be kept warm until they are five weeks of age. If frightened, turkeys may stampede and pile up on each other and suffocate. So it takes a real husbandman to manage turkeys for 20 weeks to grow out to their Thanksgiving dinner weight. For those who take time to learn all this, rasing turkeys can be quite profitable.

Turkey farmers are among the finest managers in the poultry industry To raise turkeys one must understand the genetic potential of the bird, how to feed, handle, and manage the bird in its environment.

All of this can be learned by taking Penn State Corespondence Course 106, Production of Market Turkeys. Anyone may purchase this course by sending a check or money order made payable to The Pennsylvania State University, to Box 5000, University Park, PA 16802. Price of the course is $5.50. Those who complete the course will be sent a certificate.

DER Ag Advisory Committee lists future plans

HARRISBURG -- The Agricultural Advisory Committee to the Department of Environmental Resources will be reviewing work of the Department's Bureau of Environmental Planning in developing recommendations for an antidegradation plan for non-point source water pollution.

The Bureau of Environmental Planning currently is obtaining information to determine the extent of the problem and whether there will be a need for additional rules or regulations.

It hopes to have a report ready for the DER Bureau of Water Quality Management by late Fall.

The Agricultural Advisory Committee asked that it be informed of the recommendations and any proposed changes to rules or regulations so it may review and comment on them.

At its July meeting the Advisory Committee also heard a report on activities involved in setting up a list of possible projects in the Rural Clean Water Program.

The Rural Clean Water Program Task Group is using the Department's land use maps and overlaying them with watersheds to see land use by watershed rather than by political boundary.

After eliminating areas which are not eligible for consideration because they are on public land or are affected by acid mine drainage, they will establish a priority list of problem areas from which applications for funding for corrective measures can be submitted to the Federal Government.

The Advisory Committee's Work Group on Sewage Sludge Application is continuing to review draft materials on use of sewage sludge and expects to have a package ready for the Advisory Committee at its November meeting.

The Work Group's manual on septage still is under consideration by the Department.

A "do-it-yourself" erosion and sedimentation control plan has been prepared by DER for use by farmers without major site problems who do not want professional aid.

Farmers are advised of the availability of this plan but are encouraged to seek professional assistance in developing a control strategy.

The Work Group on Milking Center Effluents hopes to have a document on guidelines for effluent utilization available for consideration at the Advisory Committee's September meeting.

Funds available for building storage structures

NEWARK, Del. – Farmers who may be faced with storage problems this Fall can obtain funds to build additional facilities or to expand present storage structures, according to directors of the Agriculture Stabilization and Conservation Service

During the past year, provisions of the farm facility and drying equipment loan program were broadened and liberalized to increase on-farm storage, and to insure adequate space for the 1978 harvest and grain placed in the reserve.

Under the program, farmers can borrow up to $50,000 on facilities adequate to store two years' crops, with 15 per cent down and 7 per cent interest, to build typical, conventional type on-farm storage facilities such as steel bins, wooden granaries, and wet storage structures. The cost of concrete and electrical wiring is also covered under the program.

It is pointed out that facility loans are secured loans, and borrowers must provide adequate security to protect the Commodity Credit Corporation's interest. The program provides for an eight-year repayment term.

Farmers can now obtain a loan to build high-moisture forage and silage facilities on their farms, and to remodel existing storage structures. Previously, loans were available only for construction of new facilities for high moisture grain or grain silage, and dry grain. These loans will benefit dairymen and livestock producers who need storage for grass silage, and also grain producers with storage facilities that need modification and remodeling to increase capacity and efficiency, the ASCS officials say.

For more information on the farm facility loan program, one can contact the county ASCS office.

For Dairy & Poultry Farmers - the new MARTIN V-MODEL semi-liquid spreader (patent pending).
"NEW" "NEW"
The new Martin Spreader is designed to handle manure from free stall barns, semi-liquid storage, barn cleaners and front end loaders. Available in three standard sizes - plus - customer built to meet special needs. Custom-built includes length, width, capacity and top opening to meet your requirements. All sizes are built to last.

THE FOLLOWING FEATURES ARE STANDARD EQUIPMENT ON MARTIN'S V1500 gal., V2100 gal., V2250 gal., V3300 gal. TANK SPREADERS:
★ Heavy duty internal chopper type auger
★ Includes Hydraulic cylinder and all hoses
★ Includes PTO shaft, jack and ladder.
★ Spreaders built and designed to handle manure from free stall barn without adding any liquid.
★ Rear fan built to handle spread of 45 to 60 feet liquid or thick manure
★ Manure tank can be filled with barn cleaner — Scrape off Ramp — Front End Loader or Pump.
★ Large 12' opening from tank to discharge fan.
★ Special V-Shape design facilitates smoother flow of manure removal.
★ Braking System Optional, 4-wheel Hydraulic Brakes controlled from tractor
Call us today to see the new MARTIN V MODEL SPREADER and ask about other Martin products like liquid manure equipment - full line of free stalls - gates and fences

Charolais show, sales draw exhibitors nationwide

By KENDACE BORRY

DELAWARE, Ohio — Two major Charolais sales, combined with a show were held last weekend in Delaware, Ohio, with exhibitors from all over the United States present, including the **Lancaster Farming** Area.

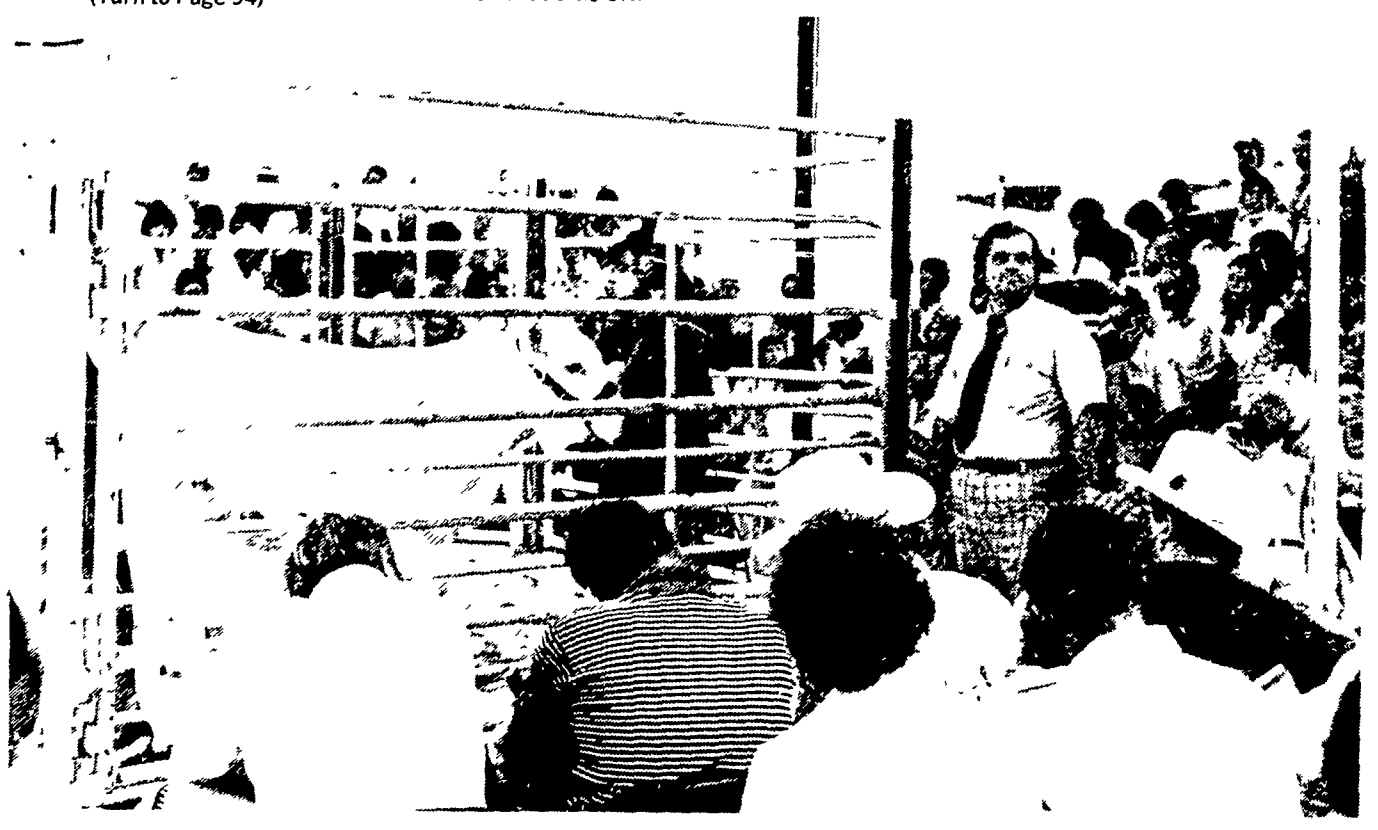
On July 7, the Breeders Sale was held at Riverwood Farms, located outside of Delaware. The second time this national sale was ever held, the top selling animal was Riverwood Headliner 777, a polled Charolais bull born in 1977. Selling a three-quarter interest in the bull, the animal brought $10,000 on the auction block

Buyer of the white purebred bull was the Flying M Ranch, Morris, Pa

The second highest selling animal at the sale was Riverwood Maxine 4826 which brought the price of $6,900 She was bought by Elmbrook Farms, Ed-

(Turn to Page 94)

Winning the Herdsman Award was Keystone Fitting Service, owned and operated by Mr. and Mrs. Cliff Orley, Lebanon R4, seen on the right. Holding the award is Don Sunday, also from the Keystone Fitting Service, which was presented by Dr. T.E. Hogsett, Hillsboro, Ohio, president of the Ohio State Charolais Association.



Between the two sales, buyers from all over the country gathered to pick out the Charolais cattle that they wanted This is the auction area which was located on the Riverwood Farms for the Breeders Sale.

BIG CAPACITY, LONG REACH, HIGH PERFORMANCE!

NEW IDEA 177 FLIGHT ELEVATOR

Whatever you want to elevate, the Avco New Idea Flight Elevator can handle it ear corn, shelled corn, baled hay, beans, small grain or ensilage It's available in the length you need from 31 to 51 feet. Both the regular and long trucks feature a 96 inch wide tread for extra stability All sections are made of galvanized steel with steel angles at overlapping joints for extra strength Choose from PTO, gas or electric motor drive It's the flight elevator designed for big capacity

NEW IDEA FARM WAGONS GET THE JOB DONE!

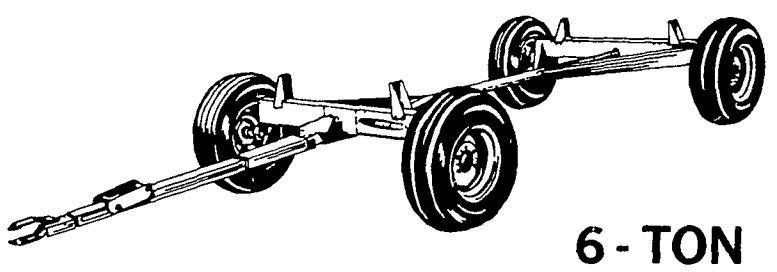
THREE TOUGH WAGONS TO FIT YOUR NEEDS.

Now you can choose from three different-capacity farm wagons to suit your needs from hauling grain to forage boxes.

MAXIMUM STABILITY . . . You get a balanced load across all kinds of terrain with extra-wide tread widths, from 70 to 75 inches.

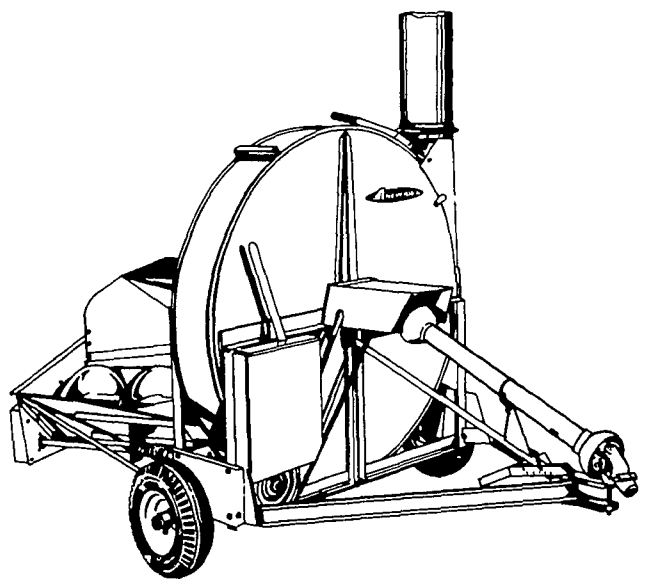
MAXIMUM MANEUVERABILITY . . . The short turning radius and automotive-type steering of these wagons lets you pull them through tight spots with ease.

MAXIMUM SPEED . . . Large, sturdy, heavy-duty spindles with tapered roller wheel bearings provide a rugged foundation for all of your hauling needs.



6 - TON
8 - TON
10 - TON

THERE'S A GOOD IDEA BEHIND EVERY NEW IDEA.



Here's a rugged new high capacity Forage Blower that's easy to set up, easy to position . and easy to transport It can blow 100 tons of silage or 70 tons of haylage, to the top of your highest silo in just an hour.

You'll like the ease of attaching this Forage Blower to your tractor drawbar It's so well balanced that it can be hitched up in seconds

The hopper is angled into the fan to assure a smooth and constant infeed of material Six fan blades, 54 inches in diameter, whisk the material upward at a speed exceeding 125 feet a second

A flow control device encloses the center of the fan to virtually eliminate material carryover Adjusting fan blade tip clearance is quick and convenient

Rugged, top quality construction throughout this Forage Blower is your assurance of long, trouble-free service Operating efficiency is built right in Sealed bearings are used for minimum maintenance And other features are designed with you in mind

Take the adjustable A-frame hitch It makes it quick, easy and safe to level the feed hopper, regardless of drawbar height, even on an uneven surface

Also, it's simple to match the hopper height to the forage box or other hauling unit Two wheel settings give you a choice of heights, or you can remove the wheels for the lowest hopper level The hopper's low profile lets you drive in close with nearly any make of unloading box

Extension agents searching for data on foreign ownership of farm land

By DIETER KRIEG

STATE COLLEGE — Senator Herman Talmadge, chairman of the Senate Agriculture Committee, recently directed Cooperative Extension directors in every state to assemble information on foreign purchases of U S farm land. The directive is a part of a national effort to determine the scope of foreign land ownership in this country.

Pennsylvania's Extension Director, Dr. Thomas King, in compliance with the instructions given by Talmadge, has written letters to each county agent in the state, asking that they report on foreign land purchases in their respective counties. The reason for the research at the county level is that there is a lack of good information at the state and federal levels. "Talmadge believes the information can be gathered at the county level," King explained.

But even that isn't easy, according to King, who is already receiving replies from a number of agents across the state Nevertheless, the search goes on. The full report is expectd to be completed by October 1 of this year.

Senator Talmadge specifically wants information on foreign land purchases that took place between Jan. 1, 1977 and June 30, 1978.

Foreign ownership of U.S. farm land has been a hot topic of discussion for months. A number of congressmen are reportedly involved in the investigations and attempts to curb them. Among them is Congressman Robert Walker of Lancaster, Chester and Lebanon counties.

Thomas B. King

Testifying last month before the House Subcommittee on Family Farms, Rural Development and Special Studies, Walker exclaimed: "Large scale purchases of farm land by foreign nationals is a fact of life which carries with it a threat to our way of life."

Citing specific examples of purchases made by foreign interests, Walker called on Congress to enact legislation to force individual foreign citizens, foreign companies or agents acting on behalf of foreign interests to register land acquisitions with the Secretary of Agriculture. Walker has introduced a bill, H.R. 12655, with registration requirements for any foreign interest or individual making a purchase of 25 or more acres of farmland or making an acquisition of land that involves at least $25,000.

Under Walker's bill, a fine of $10,000 is possible for anyone failing to comply with the registration requirements. In addition to the amount of acreage purchased and its value, Walker's legislation requires that buyers also be required to tell the Secretary the location of the land and its intended use.

During his appearance before the subcommittee, Walker blamed the rise in the number of foreign purchases of U S. land on the falling value of the dollar. According to Walker, " they (foreign citizens) have used land purchases to unload surplus dollars in a way that permits substantial return on their investment."

Walker expressed concern over three possible results of foreign investment. First, vast amounts of land are falling into the hands of persons or corporations that have no direct interest in our national interest. Second, foreign interests could eventually hold the power to control U.S. food supplies; and, third, the price of U.S. farmland is being driven up by the infusion of foreign money.

In his testimony, Walker said state laws do exist to deal with the issue of land purchases by non-U.S. citizens, however, the laws do not work well because information on real estate transactions is not readily available. The Pennsylvania Congressman stated it was time for the federal government to become involved to help ensure the availability of such information. Walker's bill, H.R. 12655, has (28) cosponsors.

According to information circulating in Washington, an educated guess is the best anyone could have on any estimate of how much American farm land is foreign owned. Furthermore, it is widely acknowledged that foreign investors can cover up their tracks pretty well if they desire to do so. Those closest to the congressional investigastion have also determined that foreign demand for U.S. farm land is apparently greater than availability. It's reported that there is a growing interest among foreigners to purchase American farm land.

4-H club meets

Bernville - The Western Berks 4-H Dairy Club meet July 7 at the home of John Stump. There were 15 members present.

Before the meeting, the leader showed the correct way to lead cattle. Under old business, awards were given for Hoard's Dairyman judging. Then a report was given on Penn state for club congress, and a report was given on the Regional Dairy Judging.

Under new business, dates for future activities were listed.

Raising celery is hard work, but satisfying

By KENDACE BORRY

EAST PETERSBURG — Celery harvesting is getting into full swing right now at the Jay Hodecker Farms, East Petersburg. The Lancaster County farmer, who has been raising the crop for 31 years, noted that the first crop of the season was taken from the fields about the first of July.

Hodecker grows both a Summer and a Fall celery crop, raising Penn-crisp, a Penn State development. The hothouse plants are started in April, at nearby greenhouses which contract to grow the young seedlings. They are transplanted to the fields around the beginning of May. Later celery seedlings are grown in seedbeds, much like the young tobacco plants are grown.

The early celery must be irrigated at nights to keep the frost from damaging the plants. The last seedlings are put in the field about mid-July.

The original seed for the celery comes from Penn State which they develop According to Hodecker there is no commercial seedhouse in this area which will grow the seed, a job that takes two years

Hodecker related that there is a lot of manual labor involved with the celery crop, "about 100 times more than corn, and twice as much work as tobacco" There is the planting of the

(Turn to Page 115)

Housed in the plastic to turn the celery to a crisp yellow this crop will wait for about one week before it is ready to be harvested.

Jay Hodecker, East Petersburg, checks on his celery to see how it is growing. He has been growing the vegetable for 31 years.

Foreman says public needs nutrition knowledge

WASHINGTON, D.C. – In remarks delivered at the Second Annual CNI Conference on Nutrition and the American Food System, Assistant Secretary of Agriculture Carol Foreman defined the government's responsibility to communicate with the public about nutrition Government owes its citizens explanations about research into nutrition that is funded with public money, and although government has provided information about nutrition, it could do a more effective job of communicating nutrition information. She did not believe that government involvement on behalf of the public would limit the growth or success of the food, and that government clearly has the responsibility to communicate about nutrition and food safety and quality. Just when to communicate poses a more difficult problem.

Nutrition issues are not simple ones, stated Foreman, and we are still looking for the questions and answers, but we don't have the luxury to withhold comment. She pointed out that scientists and nutritionists have been debating the technicalities of Dietary Goals for over a year and many of these scientists feel that there is insufficient scientific evidence for these broad recommendations. They are calling for more research and more information. "Well, we all want to know more and we all want to be certain," stated Foreman. "Absolute certainty is hard to come by...people will happily settle for some common sense and sound guidance about nutrition." Instead of asking whether it is absolutely certain that high percentages of saturated fat in the diet is harmful, we should be asking if there is any evidence that reducing the amount of saturated fat in the diet is harmful. "I haven't heard of any (such reports). Now if it can be agreed that reducing the level of animal fat is not harmful and there exists some evidence that high levels are harmful, why not just say that straight out. People are not stupid. They can make choices, and they deserve the right to do so."

Other speakers at the two-day conference included FTC Chairman Michael Pertschuk, FTC Bureau of Consumer Protection Deputy Director Tracy Weston, FDA Commissioner Donald Kennedy, and Peter Bourne, special assistant to the President for health issues. These speakers addressed the need for a national nutrition policy, which would include goals and objectives for nutritional health and dietary changes. Nutritional information reaching consumers today is often biased, conflicting, inaccurate, and deceptive, and government has the responsibility and obligation to provide consumers with the basic information they need to make wise decisions about the food they buy. Government is looking for active participation by consumer groups, and they urged them to get involved in the development of food standards and policies. While no one advocated that government dictate the choices of food to be made available, all speakers felt that consumers had a "right to know the nutritional value of food," and that the government's role was to provide nutritional information beginning with nutritional labeling of all foods.

Missouri study claims energy is wasted by food processing firms

COLUMBIA, Mo. - Energy consumption within the food processing industry could be substantially reduced if people in the industry would simply use energy-conserving technologies, according to a report by University of Missouri-Columbia food scientists.

Furthermore, they say, "excessive energy" is expended to "enforce some food regulations" within the food industry.

To make these findings, Nan Unklesbay, UMC food scientist, developed an energy accounting model to systematically account for energy used in food processing, the food distribution system and the food service system.

In one phase of her study, for example, she and other scientists looked at a hospital which had a practice of cooking 100 more servings than needed, then putting them in a walk-in refrigerator for 48 hours, removing them, reheating them and serving them.

Studies showed energy costs were eight times higher using this method than they would have been if the hospital had simply produced only the amount of food needed at each meal.

Unklesbay is also determining the energy costs of infrared cooking and is the first to investigate the effects of this cooking method on the nutritional quality of food.

"Infrared cooking uses a higher frequency than microwave (purely heat energy)," she says. "It browns food, steams it, broils it, bakes it—everything but deep-fat frying."

Finally, she and her colleagues are in the midst of a national forecasting study to show what impact of growing consumer awareness of nutrition will have on the fast food industry in the next 20 years.

"I definitely believe processors and consumers will change their habits once they learn more about energy expenditures in food systems," says Unklesbay.

Retirements announced

NEW HOLLAND - Sperry New Holland has announced the retirement of five employees effective July 1. They include: David S. Auker, Ephrata, tool crib attendant; Amos F. Breniser, plant servicer, Leola; Ephraim H. Rhoads, assembler welder, Akron; Marvin H. Shenk, industrial engineering estimator, Denver; and George M. Weaver, hobbing machine operator, New Holland.

Twin Valley FFA lists activities

ELVERSON — The Twin Valley Chapter Future Farmers of America in cooperation with Elmer Hertzler, and eight local seed corn dealers has announced their annual field corn test plot intentions for '78. This year's plot contains a total of 32 different varieties. The purpose of the plot is to compare the varieties side by side in one field under the same management and weather conditions. The plot enables dealers and farmers to evaluate the varieties and provides the FFA members with a practical exercise in farm management. This program requires them to work cooperatively with local farmers and seed dealers and provide a valuable service to the community.

This year's plot is located on the Elmer Hertzler farm along Rt. 23 just East of Morgantown. The following varieties are in the test - DeKalb XL 78, XL 72AA, XL 72B, and XL 53; Doeblers 64XA, 788-3, 800-3, 80X, 78X, 70X; Eastland E 651AX, E 3XS25, PA S703; Funks 4646, 4636, 4606; Golden Acres 6968, 6992; Northrup King PX 79, PX 87, PX 76, PX 69; Pioneer 3535, 3184, 3334A, 3517, 3331, 3369A; and Trojan TX 119A, T 1120, T 1108, and TXS 113

In the near future all varieties will be marked for identification. This Fall, FFA members will do hand yield checks on each variety so that yields can be determined. This information will then be made available to both the dealers and local farmers.

The following dealers have provided seed for the test plot - DeKalb - Ira Nissley; Doeblers - Ben O. Stoltzfus; Eastland - Christ Esh; Funks - Joseph Kennel; Golden Acres - Smith Brothers; Northrum King - Titus Beam; Pioneer - Vernon Orr; and Trojan - Elmer Hertzler. FFA members responsible for the planning and implementation of the plot are President Howard Griest, Treasurer Tom Kearns, and Tom Kirk.

In other news from Twin Valley, several officers completed applications of two national FFA awards - the national chapter rating and BOAC. The national chapter rating is held each year to determine those chapters which have had the most outstanding activities during the preceeding year. It involves not only the number and scope of activities but also the involvement of all chapter members involved in the programs. BOAC - Building Our American Communities - is sponsored each year by the national FFA and the Farmers Home Administration in an effort to involve local FFA chapters in developing their communities through cooperative efforts with other community groups

In both areas, awards are presented on state and national levels. The outstanding chapters in Pennsylvania are recognized as State Superior chapters in the national chapter rating and receive state BOAC plaques. Each state then submits its best applications to the national FFA for selection of the most outstanding chapters in the nation. In the national chapter rating this means a gold, silver, or bronze rating. BOAC applications are rated the similarly but include a single chapter receiving a Presidential citation.

Twin Valley has previously received area BOAC awards, and in 1974 received a bronze emblem in the national chapter rating, and a silver rating in 1975. Chapter officers for 1978-79 are - President Howard Griest; Vice-President Dan Mosteller; Secretary Doris Mast; Treasurer Tom Kearns; Reporter Scott Haddock; Sentinel Mike Williams; Chaplain Jim Mimm; Historian Deb Kercher; Photographer Lewis Kohl; and Advisor Ronald Frederick

Dairy trade heavier

U.S. dairy exports during 1977 shot up 28 per cent to $143 million. Meantime, only 10 per cent more foreign dairy products entered this country, but carried a total value of around $295 million. A 68 per cent rise in shipments of nonfat dry milk – nearly all for donation under P.L.480 – acounted for most of the export gain, while sharply increased shipments of foreign casein contributed most to the growth in imports. USDA's Foreign Agricultural Service reports that the outlook for 1978 is not encouraging, since dairy products are currently selling on the world market at prices well below those of U.S. products, due mainly to large world supplies and liberal export subsidies.

Hesston 1010 Mower-Conditioner gives you a 10' header with center-pivot maneuverability.

Conditioner Width 110 in

It's almost like operating a self propelled! But the 1010 Hydro Swing® has all the economies of a pull type And its 10' header insures an easy fit into any size field

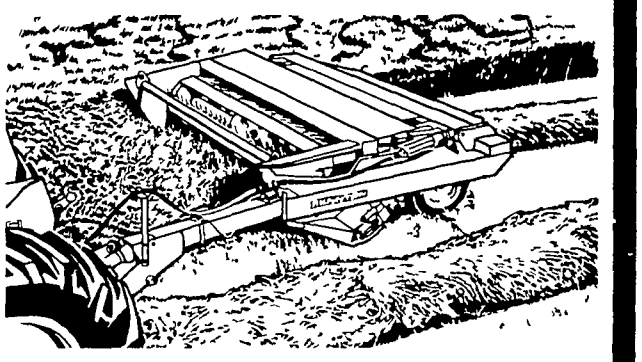
Key to its maneuverability is center pivot design that allows the header to work on either side of the tractor and anywhere in between Famous Hesston conditioning system delivers quality hay Swathing shield or windrow forming and fluffing shield lets you follow your own hay curing management plan exactly

Hydrostatic header drive and hydraulic header control allow on-the go positioning for added convenience

Ask your Hesston dealer about the 1010 today!

Hydro Swing is a registered trademark of the Hesston Corporation

HESSTON
PT-10 WINDROWER



From sickle to full widtn conditioner without touching the ground in between That's the direct feed Hesston PT 10 windrower What this means to you is cleaner hay, more uniform conditioning, fewer moving parts and greater capacity per foot of cutterbar You also get the conditioning action that saves the leaves and makes Hesstonized hay possible And the conditioner rolls adjust to give you more aggressive action in native hay or grasses where leaves are not easily separated For windrowing at its pure and simple best, see us about the Hesston PT 10

★ Note PT-10 & PT-7 are similar except for width of cut

Govt. deficit spending blamed for consumer price increases

PARK RIDGE, Ill. – Allan Grant, president of the American Farm Bureau Federation, blames government deficit spending and huge balance-of-trade deficits – not food costs – as prime causes of consumer price increases.

"The rising cost of living burdening American people today can be attributed primarily to unchecked government spending and the decline of the dollar in other major industrial nations," said Grant.

Grant's comments were made in response to the latest government report showing a 7 2 per cent increase in the overall cost-of-living index. The report cited rising food costs as one of the major reasons for the increase.

In another report released, wholesale prices rose seven-tenths of one per cent in June, with food prices once again cited as the major factor.

"Let's be realistic about this," Grant said. "American farmers are not responsible for higher retail food prices most of which have risen even as farm prices drop. Most food price increases take place somewhere between the farm gate and the supermarket check-out counters."

Grant said the nation's balance-of-trade deficit for last fiscal year was over $25 billion. He noted that the administration's own chief inflation fighter, Robert Strauss, has warned of the inflationary dangers of the trade imbalance saying it would add dramatically to the cost of other products paid for by Americans.

"On the other hand," Grant said, "the farming community in this country exported a record $24 billion last year – which was instrumental in slowing decline in the foreign value of the dollar.

Grant noted that American farmers produce an abundance of food for domestic needs but also have a huge exportable surplus that must be sold abroad. This, he said, helps to pay for needed imports of foreign oil and other products.

Eggs cracked up as bargain

Henry Muller

DECATUR, Ga. – In a letter to Secretary of Agriculture, Bob Bergland, United Egg Producers (UEP) President Harry Muller requested that the value of eggs to the consumer be stressed by Bergland and the Department of Agriculture.

Muller pointed out that "most features on eggs are in the $.49 to $.59 per dozen range making eggs a tremendous value to the consumer at $.32½ to $.39½ per pound of protein."

"Take a look at other FEATURED items available to the consumer and compare them with eggs," said Muller. Price per pound comparisions follow:

Cat Food	61½ cents
Dog Food	40 cents
Fish	1.19 to 1.99
American Cheese	1.32
Pork Roast	1.29
Bologna	1.58
Tunafish	1.38
Hot Dogs	1.29
Hamburger	1.29
Rump Roast	1.69
T-Bone	3.49
Sirloin	2.69

"Eggs are in plentiful supply and prices are such that consumers should be taking advantage of this high protein product," Muller told Bergland, and further suggested that Bergland tell the American consumer.

Muller, in commenting to the industry, stated that "We're selling our product below the cost of production - - we seem to be the only ones supporting the president's anti-inflation program since, unlike other manufacturers or commodities, we are unable or unwilling to pass through our additional costs. Muller called upon all egg producers to make the necessary inventory adjustments which would enable the egg industry to return to reasonable supply-demand levels.

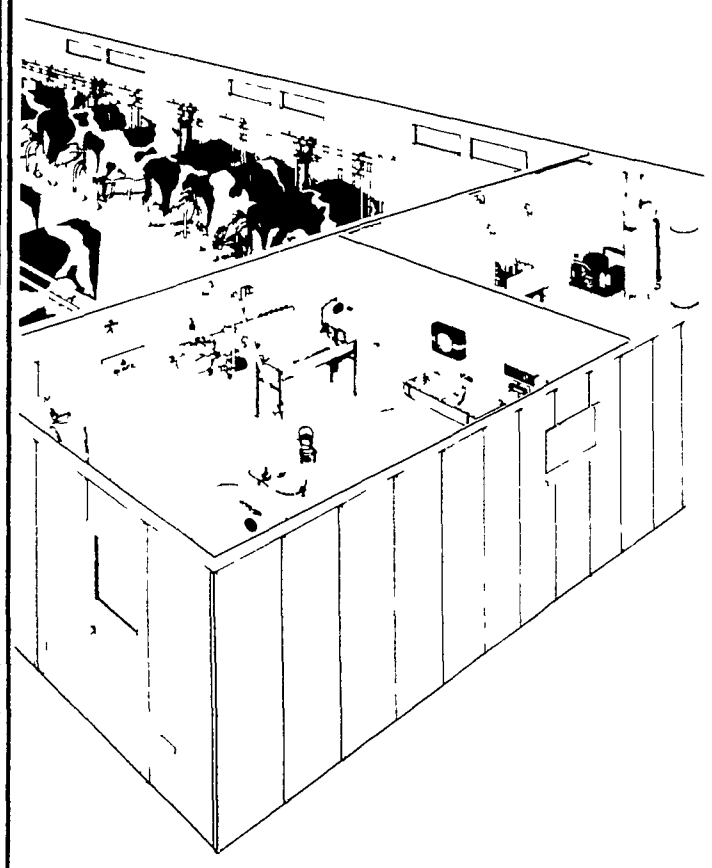
Maple syrup down

U.S. maple syrup producers collected an estimated 1.2 million gallons this past winter, 5 per cent fewer than in 1977, but 24 per cent more than in 1976. Deep snows hampered sugaring operations in New York, Pennsylvania, Michigan, and Ohio, although New York producers took in 10,000 gallons more than last year for a total of 330,000. Vermont remained the leading producer, despite a drop of 27,000 gallons to 410,000. Total U.S. output was worth an estimated $14.6 million, and carried an average farm value of $12.60 a gallon.

BOU-MATIC

MILKING SYSTEMS

BOU-MATIC PIPELINES— The milking system with dairy proven features that all add up to a better way to milk.



- **BOU-MATIC DETACHERS— Sized for any type milking operation.**

Of course some of the animals were a little less anxious to be sold than others.

Charolais show

(Continued from Page 94)

designed with two specific purposes. First, national recognition was gained for the Charolais breed of cattle by demonstrating through a consignment sale that the the breeding programs at home on the farm and ranch are producing a superior quality of cattle.

Second, the sale provided all Charolais breeders the opportunity to buy superior genetics from these breeding programs to further enrich their own herds.

Before any animal could be sold at the sale, it had to meet specific requirements. Each consignment had to be bred by the consignor. Second, the sire of each animal consigned was required owned by the consignor.

The first Breeder's Sale was held in 1977 at the Wesson Charolais, Inc. Farm in Victoria, Arkansas.

On July 8, the Charolais cattlemen travelled to the Delaware County Farigrounds, Ohio, to participate in the morning show and afternoon sale

There the 10th North American Chorolais Classic was held, bringing cattle together from 12 states. This was the first year the event was held in Delaware.

There were 65 lots of cattle shown and sold, with nine classes of females and three classes of bulls.

Top selling bull at the sale was Riverwood Gladiator 3686, consigned by Riverwood Farms, Powell, Ohio. The animal, which was named grand champion bull of the show, brought $2950. It was sold to Grusy Bros., Gridley, Ill., and La Fraise Farms, Flanagon, Ill.

Reserve grand champion bull was Mr. Camelot Polled 171, consigned by Double D Ranches, Coshocton, Ohio. The animal brought $1700 on the auction block

The grand champion female was Miss CCC Eleuthera 665 P Polled, consigned by the Canada Coal Company, Morehead, Kentucky. Sold for a price of $2,600, she was bought by LeRoy Myers, Clear Springs, Maryland.

Myers was the top volume buyer at the North American Classic Sale, purchasing other animals besides the grand champion female.

The reserve champion female was Riverwood Mayflower 1256. Consigned by Riverwood Farms, she too was bought by LeRoy Myers.

Selling among the highest five prices females at the sale was a Lancaster County girl's entry. Janice Kaylor, Elizabethtown, showed her heifer K Hanging Karen, Polled, to second place in her class, placing just under the cow that was named reserve champion.

At the sale her animal brought $2200 and was bought the the Triple DDD Charolais Farm, Warren, Ohio

Two awards were given out during the North Amerrican Classic.

The Supreme Rotating Breeder Award was won by Royal Oaks Farms, Oak Hill, Ohio This trophy is given to the breeder who contributes the most to the success of the show Credit is given to each area of participation with a broad scope of points allowed to make the presentation an impartial selection of the outstanding breeder.

Also as part of the festivities, the Herdsman Award was presented This award, won by the Keystone Fitting Service, owned and operated by Mr. and Mrs. Cliff Orley, Lebanon R4, Pa., is presented for the best display of cattle and facilities during the show and sale.

The Orleys and their crew, under the direction of Don Sunday, showed 26 animals consigned to them at the North American Classic, among them the reserve champion Charolais bull.

The Charolais Classic was sponsored by the Ohio Department of Agriculture and the Ohio State Charolais Association.

Jim Colliver, Charolais Sales management, Columbus, was in charge of the show and sale.

Colliver noted that the Classic Sale is one of the top such events in the country. There was about $10,000 available in the show premiums and a $1,000 jackpot for the grand champion female and bull.

Average price for the cattle at the sale was $1072, according to Colliver. Grossed from the sale was $69,000 on the 65 lots of cattle. He called the sale "stable" and related that he was satisfied with the prices.

Twenty-six of the animals sold came from the state of Ohio, with the remaining 39 coming from 11 other states.

High selling cow, outside of the champion animals at the sale, was a Full French animal born in 1967. Consigned by the Triple DDD Charolais Farms, Medina, Ohio, the cow, known as Checia 03163, was sold for $2700. Buyers of the animal were Woody Farms, Bloomington, Indiana.

Cattle sold went to 12 different states, including Pennsylvania Included in the sale were polled, full French and domestic cattle.

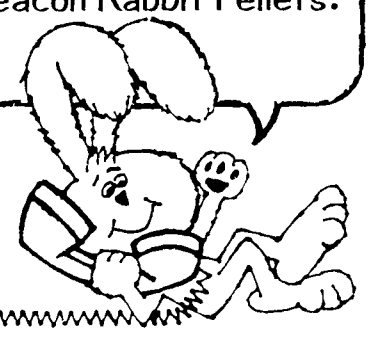
"Mr. Rabbit Grower?
Are you looking for a year-round feed for us rabbits?
Try Beacon Rabbit Pellets."



Here's a ration that you can give us rabbits without supplementary feeding of hay or other feed It's a sensible answer when you can't get good quality hay the year round

We rabbits like these hard pellets we eat 'em eagerly And when we do you know we're getting the proper ration in the proper balance Also as you know a soft feed diet will develop sore mouth and loose teeth This won't happen when you feed hard Beacon Rabbit Pellets

Pellets are easier to handle too They're compressed under great pressure so the bulk for 100 pounds is a lot less

Get FREE Feeding Directions

By the way be sure to ask for Beacon's easy to read feeding directions for the pellets A sure guide to a sensible feeding program that will develop strong healthy rabbits

Custom farm work cost $1.66 billion last year

EDITOR'S NOTE – The following is a report from the United States Department of Agriculture which reviews a special survey on custom rates in Pennsylvania.

WASHINGTON, D.C – The cost of getting someone else to do the work has climbed appreciably over the past several years.

On the national level, outlays by farmers for machine and custom hire work have risen from $902 million in 1961 to $1.22 billion by 1974 and nearly $1 66 billion last year The gain between the last two reporting periods was 36 per cent.

This compares with a 26 per cent increase encountered by Pennsylvania producers who paid for similar chores. Statewide costs for 1978 likely will average almost six per cent higher than 1st year.

Each year the Pennsylvania Crop Reporting Service surveys a cross section of several hundred custom machine operators for an insight into charges farmers may face in the coming season.

Agricultural economists at Pennsylvania State University review the survey results to help farmers better understand their production costs and decide between buying equipment or hiring someone to handle the tasks.

The Pennsylvania survey summary, issued each April, covers about 65 farm chores frequently hired. The list not only covers such general activities as plowing, planting, and seeding, but gives the details for some specialized work These include bulldozing at $20 50 per hour, helicopter application of chemicals for $4 20 per acre, drying 23-per cent corn for 22 cents per bushel, and 45 cents to dig a post hole

Actual costs may vary because of terrain and soil conditions, alternative opportunities for labor and equipment, working situations, and services performed.

Since 1974, some of the individual jobs have meant marked expenditure gains for producers. For example, four years ago custom potato harvesting in Pennsylvania averaged $65.50 for a 41-per cent rise.

Just like everything else, charges for custom farm work have risen sharply over the years.

Conventional till planting of corn with fertilizer ran $3.75 per acre in 1974 and is expected to be $5.40 this year. Corn picking and shelling has gone from $11.90 an acre to $15, a 26-per cent increase.

Plowing Spring stubble meant an average outlay of $5.70 per acre, now it's $7.25, and disking with harrow or cultipacker moved from $4.45 to $6.15.

Combining small grains carries a charge of $12.30 per acre against $8.70 four seasons ago.

The custom machine operators' expenses have advanced because of greater costs for large and more sophisticated equipment, higher fuel bills, and increased wages and other charges.

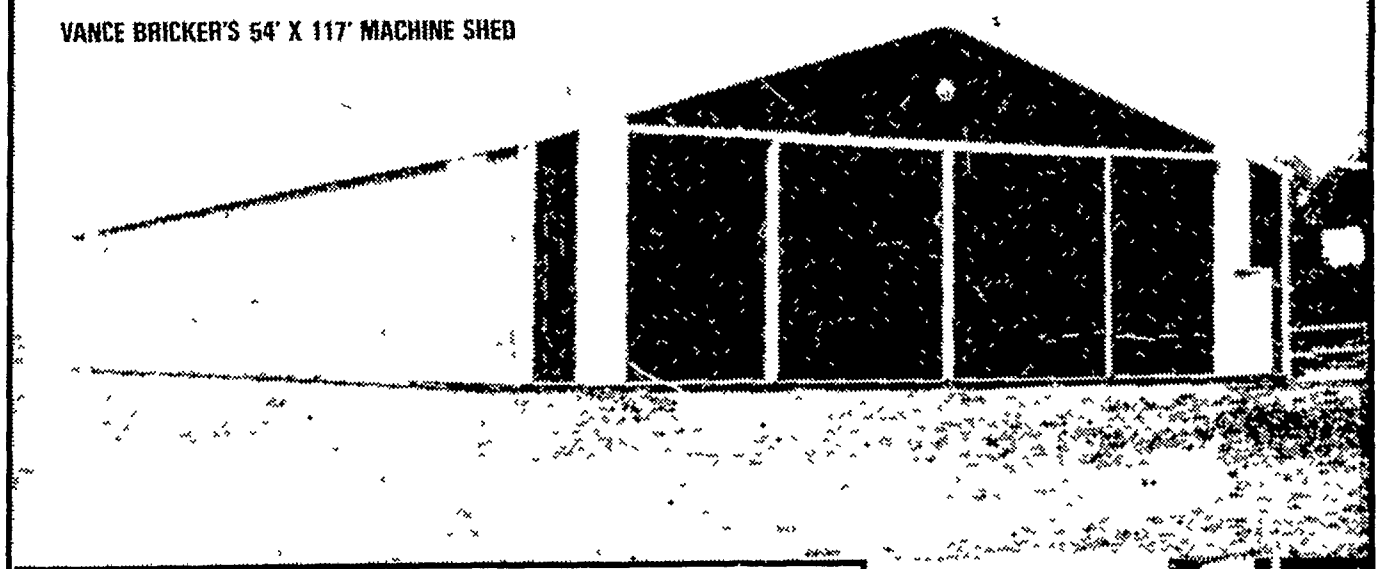
The Pennsylvania survey breaks the estimated costs into two descriptive areas, mountain and valley, which about equally divide the State's agriculture. Costs generally run higher in the mountain sector.

Cultivating is $5.30 per acre, compared with $5.15 in the valley; mowing hay, $4.35 against $4.05; and spraying weeds, excluding chemicals, $3.10 versus $2.90. In contrast, making silage with a self propelled chopper costs $31 in the valley and only $24 in the mountain area.

More Pennsylvania Farmers Choose Morton For Big Machine Sheds!

HERE ARE REASONS WHY...

VANCE BRICKER'S 54' X 117' MACHINE SHED



"I believe that my big Morton Machine Shed has a lot to offer in a number of ways It is very well constructed, has lots of room, and has a beautiful, attractive color combination During erection, the Morton crew did a fast and excellent job with good cooperation between the Morton Buildings salesman and myself Best of all, the building is priced to suit the average farmer Now that it's here, I don't know how I had gotten along without it"

York Co. hosts 4-H livestock judging

WELLSVILLE - Warrington Green Farms, owned by the Doctors Mr. and Mrs. George Kushner, hosted the July 7 York County 4-H Livestock Judging Competition. About 80 representatives from nine counties took part in the annual contest.

Winners in the individual events are as follows: Senior Beef Judging - 1. Tim Beck, York County, with 138 points; 2. Diane Krause, Lehigh, 137 points; 3. Joe Silorski, Lehigh, with 135 points; 4. Harris Wright, York, with 134 points; 5. Bob Livingston, York, with 131 points.

Senior Sheep Judging - 1. Brenda Werner, York, with 145 points; 2. Laurie Dobrosky, York, with 138 points; 3. Bob Livingston, with 137 points; 4. Brenda Walters, York, with 137 points; 5. Sara Fretz, Lehigh, with 137 points.

Senior Swine Judging - 1. Chris Sunday, York, with 142 points; 2. Steve Trostle, York, with 142 points; 3. Diane Krause, with 141 points; 4. Brenda Walters, with 139 points; 5. Harris Wright, with 139 points.

Senior Reasons Presentations - 1. Brenda Werner, 128 points; 2. Tim Beck, 127 points; 3. Brenda Walters, 124 points; 4. Steve Trostle, 122 points; 5. Laurie Dobrosky, 121 points.

Senior Ten high individuals - 1. Joe Sikorsky, 401 points; 2. Diane Krause, 398 points; 3. Bob Livingston, 397 points; 4 Laurie Dobrosky, 395 points; 5. Chris Sunday, 395 points; 6 Brenda Walter, 394 points; 7. Sara Fretz, 393 points; 8. Brenda Werner, 391 points; 9. Harris Wright, 390 points; 10. Pam Reichart, Adams, 384 points.

Senior Team Placings - 1. Lehigh County, 1192 points, team of Sara Fretz, Diane Krause and Joe Sikorsky; 2. York County "A", 1187 points, team of Bob Livingston, Laurie Dobrosky and Chris Sunday; 3. York County "B", 1175 points, team of Brenda Walter, Harris Wright and Brenda Werner; 4 York County "C", 1131 points, team of Lisa Dobrosky, Tim Beck and Steve Trostle; 5. Adams County, 1128 points, team of Bill Harrison, Dawn Keefer and Pam Reichart.

Junior ten high individuals - 1. Kay Sweigard, Dauphin, 288 points; 2. Jeff Hess, Lancaster, 279 points; 3. Mary Dennin, Cumberland, 274 points; 4 Glenn Wuchter, Northampton, 274 points; 5. Ernie Frey, Lancaster, 271 points; 6. Bonnie Wessner, Lehigh, 2698 points; 7. Susan Janney, York, 268 points; 8. Andy Wagner, Northampton, 264 points; 9. Kim Brackbill, Cumberland, 260 points; 10. John McCauley, Lehigh, 260 points.

Tie placings were broken by overall points scored by individual competitors.

Work program announced

HARRISBURG – With the recent signing by Gov. Milton J. Shapp of legislation appropriating Federal funds to State programs, approximately 450 unemployed youths between the ages of 16 and 23 will be given an opportunity to work on conservation and other projects throughout the Commonwealth under the Young Adult Conservation Corps, according to state YACC Coordinator Edward M. Seladones, Deputy Secretary for Administration, of the Department of Environmental Resources.

Recruitment for the positions, which are to run through September 30, 1979, at 88 work sites, including two residential camps, is through the State Bureau of Employment Security and applications now are being accepted at all local BES Job Service offices.

The purpose of the Federally-funded program is to "provide employment and other benefits to youth who would not otherwise be currently productively employed through a period of service in which they engage in useful conservation work and assist in completing other projects of a public nature..."

Seladones said work sites will be on State Park and State Forest lands administered by the Department of Environmental Resources, State Game Commission lands, Fish Culture Stations administered by the State Fish Commission and local government recreation areas through a subcontract with the Department of Community Affairs.

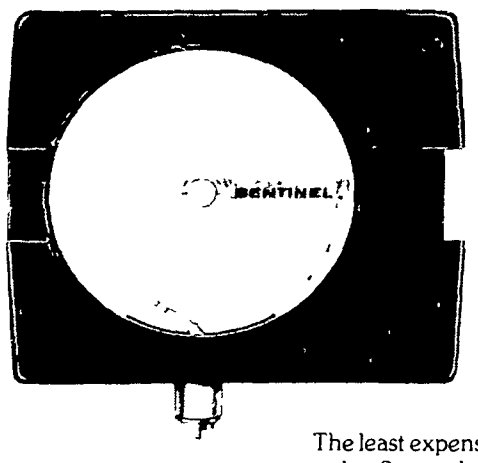
WHO'S MINDING THE MILK?



If you depend upon your milk check for a living, who's minding your milk?

The least expensive, one-shot insurance you can get is the Sentinel — the 10-inch recorder which charts temperature of your milk-cooling or holding tank Here's what it provides
- Permanent proof that proper temperature was maintained
- Record of cooling equipment efficiency
- Cleaning temperature recording on the same chart

The Sentinel is also available with provision for actuating an alarm or warning light if pre-set temperature is exceeded

Remember — if it prevents the loss of only one tank of product the Sentinel has paid for itself It minds your milk

THE BUCK — Following are the results of the tractor pulling contests held at The Buck Tractor Pulling Stadium last Saturday evening.

12,000 pound super stock

1. Harry Griest, Coatesville, IH 1456, 241 feet, 6 inches; 2. Tom Middleton, Ridgely, Md., IH 1066, 237 feet, 3 inches; 3. Amos Stauffer, Ephrata, Deutz 9006, 189 feet, 1 inch.

5000 pound modified

1. Gary Mills, Fallston, Md., 427 Chevy, full pull and 262 feet, 11 inches; 2. Eugene Spickler, Elizabethtown, two 327 Chevys, full pull and 256 feet, 7 inches; 3. Curtis Stoltz, Myerstown, Cockshutt 40, 297-9.

9000 pound open

1. Willard Will, Central City, Allison, 297 feet; 2. Dave Johnson, Deerfield, N.J., three 327 Fords, 282 feet; 3. Elwood Flowers, Manheim, 454 Chevy, 273-8.

5000 pound super stock

1. Dale Smoker, Cochranville, A-C 180, full pull; 2. Tim Stauffer, Ephrata, Deutz 8006, 278; 3. Jim Brubaker, Quarryville, A-C 180, 275-11.

9000 pound super stock

1. Tom Middleton, 253-6; 2. Marlin Brubaker, Quarryville, A-C D-21, 226-1; 3. Mark Stauffer, Ephrata, Deutz 9006, 224-2.

7000 pound modified

1. Bud Wheeler, Greensburg, Allison, 269-5; 2. Les Houck, Kinzers, two 427 Chevys, 269-3; 3. Don Landis, Berlin, two 440 Dodges, 259-9.

7000 pound super stock

1. Mark Stauffer, full pull; 2. Marlin Brubaker, 293-1; 3. Tim Stauffer, 291-11.

Less coffee used by consumers

U.S. per capita food consumption dipped only slightly last year from the record high of 1976. Use of animal products remained virtually unchanged, while consumption of food from crops slipped 2 per cent as consumers drank 25 per cent less coffee in reaction to tight world supplies and soaring prices. For 1978, economists see another slight decline in the overall food consumption index. Per capita use of food from crops may turn a bit higher, but not enough to offset a decline in the animal products category, led by reduced consumption of red meats.

The farmer meets his urban neighbor over a stone bridge on the Adams County Farmers Association float in the 4th of July parade sponsored by the Gettysburg Fire Company. The colorful float, assembled by Larry and Doris Wilkinson and John and Bonnie Hess, all of Gettysburg, emphasized the theme of "Building Bridges of Understanding." The children on the float were Josephine Hess and Eddie Wilkinson (farm side) and Jane Hess and Earl Wilkinson (urban side).

COME AND GET 'EM
RED BARN COW MATS

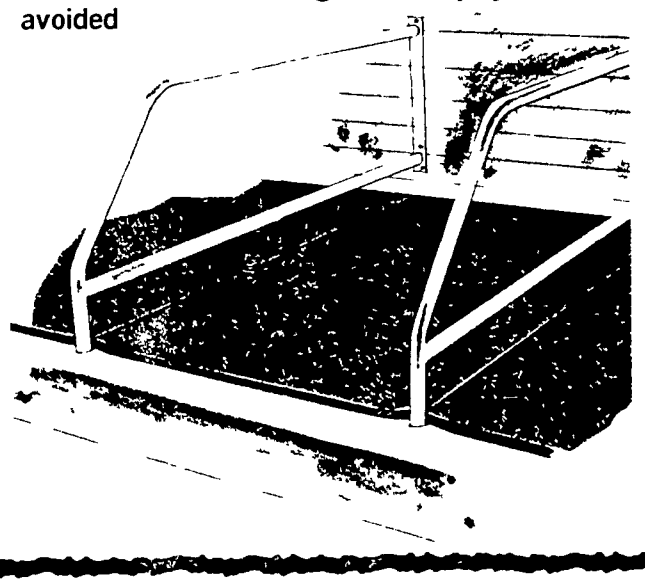
SAVE $5 PER MAT BY PICKING THEM UP YOURSELF

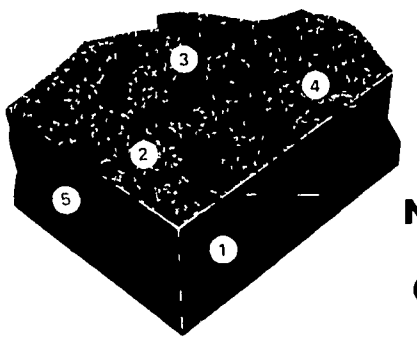
Why and How RED BARN Rubber Mats can reduce costs, cut injuries.

RED BARN floors are 100% vulcanized rubber. They were first manufactured and installed in 1968, and have proven their worth to dairymen ever since. Whether these mats are used in free stalls or stanchion barns, their non-slip qualities provide both comfort and safety for your herd. Dairymen everywhere report bedding cost reductions of 80% and more, and a dramatic decrease in clean-up time. Slips and falls that result in swollen hocks and stepped-on teats are all but eliminated.

LABOUR COSTS CUT DRAMATICALLY

RED BARN rubber flooring cuts free stall cleaning time to a minimum. One dairyman with 165 stalls averages only 15 minutes per day to keep ALL stalls clean (testimonial on request). Because RED BARN mats are tough, depressions cannot develop that require filling, as is often the case with other types of flooring. Broken dividers causing animal injury are also avoided





NOTE THESE SPECIAL QUALITIES

1. RED BARN is the thickest mat there is, measuring over ¾".
2. Surface has a grained, pebbled texture for easy cleaning and non-slip qualities.
3. Surface is resilient for comfort, yet springs back to original form.
4. TOUGH Each mat contains over 100 pounds of vulcanized rubber NO WIRE, METAL OR CLOTH BONDING MATERIALS ARE USED.
5. RED BARN is non-absorbent.

RED BARN Soft, Tough Mats Save Costs & Protect Animals.

VANCO SALES CO.

Phone 717-776-3494
Ask For Van Hocker.

RED BARN rubber mats come in four standard sizes and will fit virtually any floor installation No adhesives are required The corners of each mat are fastened with cement nails or Ram-Set pins and washers The 100 pound weight of each mat does the rest Mats are easily cut and fitted — the only tools needed are a piece of chalk, a square and a utility knife To assure dry floors and good drainage, a slope of about 3 inches per 7½ feet is recommended

DETAILED INSTRUCTIONS FOR BOTH FREE STALL and STANCHION BARN INSTALLATIONS are AVAILABLE on REQUEST

4-H'er chosen for state reporters team

SHIPPENSBURG - Karen Hornbaker, Shippensburg R5, has been selected as one of 62 Pennsylvania young adults to serve on a State 4-H Reporters Team, it was announced recently by Dr. William Lindley, assistant professor of agricultural education at Penn State.

Members of the group have recently received special communications training on the Penn State Campus and will serve as 4-H ambassadors to promote the educational youth program.

Karen Hornbaker, Shippensburg R5, recently completed special communications training at Penn State as a member of the 4-H Reporters Team. She is seen receiving her completion Certificate from Dr. Thomas B. King, Penn State associate dean for Extension.

"Their activities will help the public more fully understand the 4-H program, an integral part of the Penn State College of Agriculture", Dr. Lindley notes.

Team members will be available to talk to organizations at local, regional, and state levels, including 4-H Clubs, College of Agriculture alumni groups, legislators, and church and school functions. They also may make personal appearances at conventions and other large meetings.

Karen, an eight year 4-H member, is very active who has been recognized for achievement in several 4-H areas. She is secretary of the Cumberland County 4-H Council, and in 1977 was honored as the Outstanding 4-H Dairy Club member in Cumberland County. She has been writing a 4-H News column for the "Valley Times-Star". Karen has completed projects in dairy, swine, veterinary science, clothing, photography, flowers, square dancing. She has been a 4-H Teen Leader for four years.

Hogs are 'big-hearted'

CHICAGO, Ill. – Seems there is no end to the things hogs do for man. Researchers at a Chicago hospital now using hogs to develop and test improved artificial heart machine. Some hogs have been on the machine up to five days. Successful development of long-term life support could mean critically-ill patients would be able to survive until a donor was available for heart transplant operation.

The most famous cowboy in the world, John Wayne had a defective valve in his heart replaced with a pig heart valve. After successful operation and recovery, "Duke" is feeling better than ever.

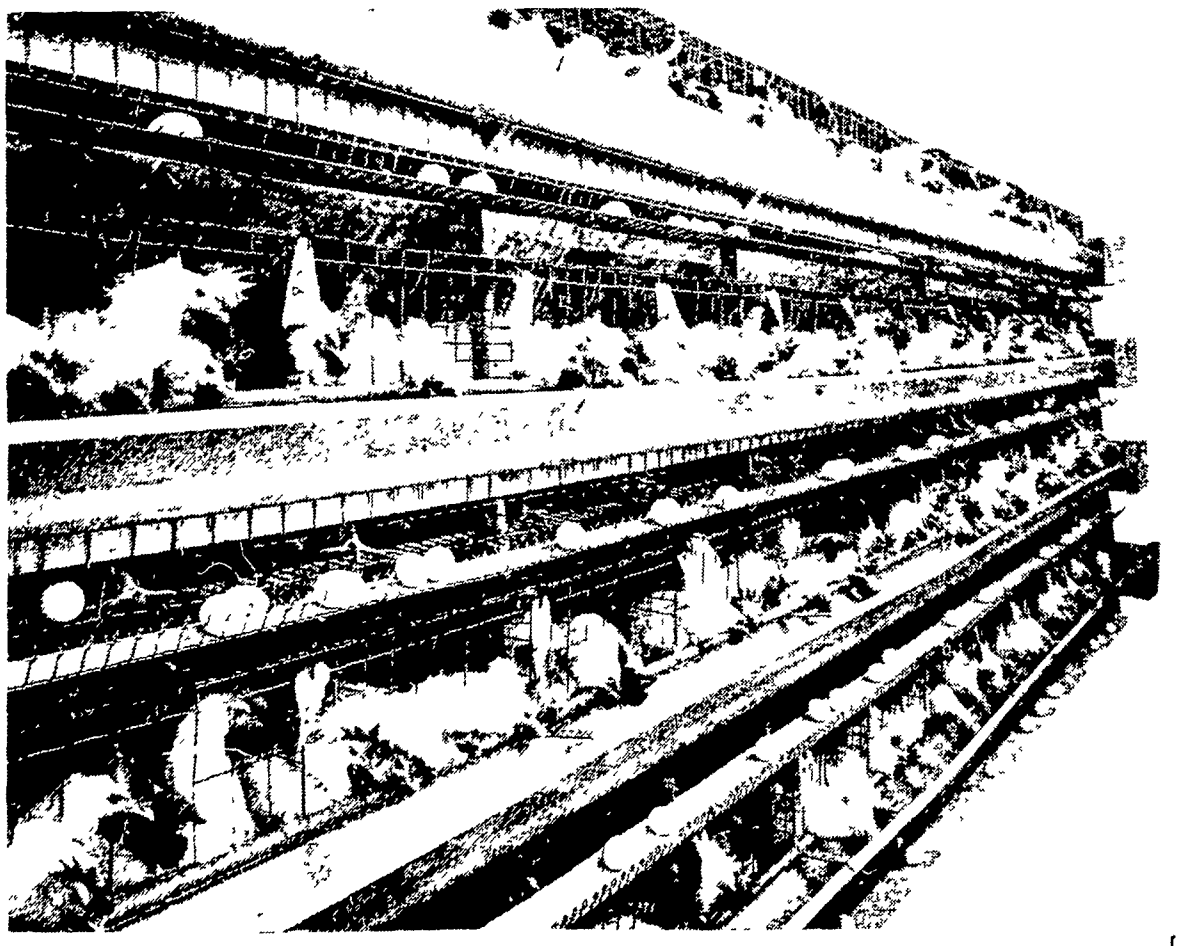
A.R. WOOD'S REVERSE CAGE

YOUR KEY TO HIGHER PROFIT

THE 4-DECK REVERSE CAGE SLANT BACK SYSTEM FROM A.R. WOOD IS BUILT TO DELIVER

EXTRA NET PROFIT - UP TO 50¢ EXTRA NET PROFIT PER HEN PER YEAR!

Research has confirmed that less competition at the feed trough is one key to more eggs and more net profit. With proper management, the Northco® 4-Deck Reverse Cage Slant Back System from A.R. Wood will deliver extra net profit from the day it's installed:



HERE'S WHY...

- The extra equipment costs are offset by savings in building costs (in new construction).
- There's no increase in operating cost, no extra feed.
- The Reverse Cage delivers fewer cracked eggs.
- Slant back design eliminates the need for dropping boards and dropping board scrapers.
- The Northco® Core Auger mixes the feed as it moves, to prevent feed separation.
- There's only a 2" setback per tier, so there's easy access to all levels.

'Small farmer' meetings set

WASHINGTON, D.C. – Small farmers from each state will have an opportunity to discuss their specific problems and their role in agriculture and rural America at five regional conferences this summer

The conferences will be co-sponsored by the U.S Department of Agriculture and the Community Services Administration (CSA), it was announced by Agriculture Secretary Bob Bergland and CSA Director Graciela Olivarez.

The participants, all small farmers, will be identified at the local level by community groups and farm operators "who really know what the appropriate definition of 'small' is in a given area," the two officials noted.

Secretary Bergland said, "For too long we have heard predictions that the small farmer will soon become extinct. But we believe the small farmer in America is basic to a healthy farm and rural economy. The family farm is still the basis of rural life. This is true even though an increasing number of Americans are selecting rural life over the urban centers."

He said that by any definition, small farmers are decreasing in numbers and he was committed to trying to slow that trend.

Using one definition, which is not universal, there are about 1.8 million small farm operators who together own approximately 37 per cent of the farmland and control 31 per cent of all farm assets (land, machinery, buildings). The Secretary said many USDA programs have in the past ignored those farmers who gross less than $20,000 per year.

Bergland said the information and recommendations from the conferences would be used to determine what administrative changes needed to be made in their respective agencies, as the basis for new legislation and to work with other federal agencies to better define an administration policy for small farmers.

The cost of bringing approximately eight small farm delegates from each state will be shared by USDA and CSA Senior officials from both agencies, as well as representatives from interested organizations and public interest groups, will be invited to attend the sessions as resource persons and observers.

The site and date for conference in the Northeast is Portland, Maine, Holiday Inn, August 30-31

Junior Grange camp set

HARRISBURG -- The Pennsylvania State Grange will be holding its 26th annual Junior Grange Camp at Camp Kanesatake, in Huntingdon County July 16 to 22.

Highlighting the camp activities will be the selection and coronation of the State Junior Grange Prince and Princess.

The new Prince and Princess will be replacing Dwayne Reinert, Slatington, Lehigh County and Sherri Ann Zechman, Womelsdorf, Berks County.

The Junior Camp will feature a number of workshops on ritual, crafts, nature, and music.

The state talent elimination for Junior Grangers will be held July 16 for vocal, instrumental, and other acts. Winners will appear on the program at the Pennsylvania State Grange convention in Butler, October 23 to 27.

Among those attending the camp will be J. Luther Snyder, master of Pennsylvania State Grange and Mrs. Snyder, and Mrs. Patricia Carncross. National Junior Grange director.

Mrs. Carncross was the 1971 National Grange Youth Princess and is now married to Richard Carncross, State Master of the Michigan State Grange.

ORTHENE– GREAT FOR TOBACCO.

Too many destructive insects attack a tobacco crop to take chances. Now Ortho has come up with a product to solve a lot of major problems. It's ORTHENE® Tobacco Insect Spray. It kills on contact and penetrates the foilage to give internal residual control. It's effective against flea beetles, resistant green peach aphids, tobacco budworm and hornworm. Come in and get the full story.

Hance says feds gave bum steer on beef prices

ANNAPOLIS, Md. – Maryland Secretary of Agriculture Young D. Hance says he feels a statement by U.S. Secretary of Agriculture Bob Bergland further damages the credibility of the administration when it comes to recent efforts to manipulate beef prices.

Bergland recently said, "The administration is deeply concerned over the recent decline in livestock prices." (See **Lancaster Farming**, page 98, of July 8, 1978 edition.)

Hance's reply is: "Who are they trying to kid? They're the ones responsible for the drop in livestock prices."

In late May, the August futures prices for live cattle peaked at $61 per hundredweight, but has since dropped below $50. Secretary Hance attributes that reduction directly to the administration's decision of June 8 to increase beef import quotas in a move to offset the higher cattle prices at that time.

Secretary Hance says, "They asked for it, they got it and now they profess deep concern over the success of their efforts. It appears the administration doesn't really know what it wants.

"Federal manipulation of beef prices already has proven a failure, and such continued actions will bring disastrous results to both the livestock producer and the consumer."

To stress his concern, Secretary Hance points out that "for three or four years livestock producers lost money on market animals and had begun to recoup part of that loss only the past three or four months.

Young D. Hance

"The announced increase in beef import quotas has had a serious psychological affect on livestock producers who, I feel, have lost confidence in actions of the administration. They will not build up their herds if they can't get a fair return for their product. This in turn will further reduce the cattle supply, and eventually the consumer will suffer even higher beef costs."

"Responding to an assertion by Secretary Bergland that the market apparently overreacted to the June 8 decision, Secretary Hance offers his opinion that "the industry is merely trying to adjust to a situation that certainly was a very poor move on the part of the administration."

Secretary Hance concluded voicing his displeasure with the administration tactics by saying, "I feel the administration is trying to appease the consumer, but, in so doing, will create little relief for them and has obviously indicated it is not particularly concerned about the livestock producer. If the administration is genuinely concerned about declining livestock prices, he will move immediately to rescind the increased beef import quota and let the market balance itself."

National Beef Cook-off set

CHICAGO, Ill. – The nation's top amateur beef cook will be selected in Oklahoma City on September 14 and 15 at the fifth annual National Beef Cook-Off.

The 1978 Cook-Off, sponsored by the American National CowBelles and the Beef Industry Council of the Meat Board, will be held at the Hilton Inn West, Oklahoma City

The event promises to be one of the best yet, according to Mrs James Selman, CowBelle National Chairman for this year's event

"We hope to have contestants representaing 48 states this year," Mrs. Selman noted. "Each contestant is a state winner."

Beef dishes in the contest are limited to cuts from the chuck, round, rump, or fresh brisket, Mrs. Selman said. "The reason for this is to inspire creative recipes from some of the less popular, more economical beef cuts. This is particularly important to consumers during this period of rising prices."

The winner will receive a $1,500 cash prize; second place, $750; third plce, $500. In addition, five honorable mentions will be named, with prizes of $100 each.

Farm wages up

Farm workers earned an average of $3.09 an hour during the April 9-15 survey week. That figure, which represents all methods of pay converted to an hourly rate, compares with $2 82 a year earlier. Workers receiving cash wages only took in an additional 24 cents an hour this April for a total of $3.08 Laborers hired for fieldwork averaged $3.01, versus $2.61 an hour for all livestock workers, according to a USDA study.

Too much machinery may strangle profits

By JERRY WEBB
University of Delaware

NEWARK, Del. - Whether a farmer can hire custom work cheaper than he can tool up and do it himself is questionable. Most farmers say they can't stand the inconvenience of waiting for a custom operator even if owning does cost more.

As a result, we have a few million farms in this country - each with a complete line of machinery. What a great economic waste.

In fact, this could well be what is driving farmers off the land - the high cost of operating a fully equipped factory with so much idle machinery.

The combine has come to be the classic in any discussion of custom vs. owning. And the question that is asked - can a typical farmer afford to own one? The fixed cost to a farmer who uses it a couple of hundred hours a year could easily be $15 per hour of use. Operating costs could add at least $3 more.

It's obvious that from a purely economic point of view most farmers just can't afford the cost of owning these machines. They could well be the millstones that make farming unprofitable - the status symbols that destroy the business.

Going back 30 years to a time when there were very few combines and most small grain went through a threshing machine, it was a different situation. Very few farmers owned threshers. Custom work was the common practice with one machine handling hundreds of acres.

The McCafferty brothers did the threshing in my boyhood home community. They were good farmers who knew their machine and how to get every bushel of grain that was possible. No one else in the neighborhood had the skill and mechanical know-how to operate that machine at peak efficiency and it would have been foolish for a farmer to try on his own.

The McCafferty brothers would usually do their own fields first, then start down the road from one farm to the next threshing oats, barley, wheat, and rye. The season ran from early July until September, with the last farm as much as 20 miles from where it all started.

Grain was cut with a binder and shocked, so leaving it in the field an extra month was no problem. A farmer usually had his own binder - or maybe he teamed up with a neighbor so he could get the grain cut when it was right. He also needed a fairly large crew for shocking if there were many acres.

Work swapping was more important when threshing machines were used. It took a lot of hands to keep the big machine running at full capacity. It wasn't unusual to see as many as a dozen farmers, plus their hired hands, working together at threshing time.

Those were the days when a man could start farming with a team of horses, an old tractor, plow, cultivator, disc, harrow, and a wagon. If he lacked a grain drill or corn planter, he swapped work with a nieghbor. It wasn't unusual for a fellow to start farming on no more than a thousand bucks. That was enough for a down payment on some used equipment and seed and fertilizer money. But then times changed - new machines came along that farmers could operate and timing became more important. Fellows who had always relied on the McCafferty brothers suddenly felt the need to own and operate combines.

Times have changed and obviously there is no way to go back to the work swapping, custom threshing days of the 1940's. But there must be some way to cut down a $100,000 machinery inventory on a 320 acre farm and still get the job done.

One idea that might work involves joint ownership - not the usual neighborhood partners however. How about a mid-Atlantic farmer teaming up with a Western farmer on the ownership of a combine? A Kansas wheat farmer needs his machine for a few weeks in midsummer. A Delmarva corn and soybean farmer doesn't harvest an acre much before Labor Day. Plenty of time to truck a combine East and make sure it's working properly. It can be trucked West again next spring before it's time to start field work. Ownership and operating costs could be shared and the combine's usefulness could be doubled.

Here's an added benefit - hitch a small car behind the truckload and the Mrs. in the cab and take a vacation at the end of the delivery. Leave the truck with the combine and return by car, taking advantage of the tourist attractions along the way.

This system could work to the advantage of both farmers with no more inconvenience than hauling a combine 1500 miles once a year. It would take some consideration and some careful matching of farmers. But the economic gain could make the effort quite worthwhile.

IFYE participant tells of trip in S. Africa

Ed. Note: This is the second in a series of newsletters written by Mark Wilson, Adams County, who is currently serving as a delegate in the International 4-H Youth Exchange program in Swaziland. In the Spring Mark had the opportunity to take a 4,267 mile trip through the Republic of South Africa, camping for three weeks. His observations follow.

As of March 1st this year, South Africa eased its petrol (gas) restrictions allowing petrol stations to remain open all day Friday and Saturday. Previously stations were required to close at noon on Friday and remain closed until Monday morning, which would have forced us not to travel on weekends.

Camping is a big pastime for South Africans. We had no trouble finding campgrounds. Most towns have a municipal campground with excellent facilities Charges per night ran from free to $4.87. Usually we paid about $2.90.

Our journey took us through Lesotho, or really into Lesotho. The one road crossing the country can only be traversed by landrover. The Kingdom of Lesotho is completely surrounded by South Africa and can be reached only by light plane or landrover

We tried matching wits with that one road that crosses the country. It was a breathtaking drive as the sparsely traveled gravel road twisted around the rocky peaks and through the mountain passes All along the way the huts of the Basotho and their small plots of wheat dotted the steep slopes

But the road proved too much of a challenge for my pickup. We were forced to turn back when we spun out on a mud-slicked grade after about 3½ hours of driving. After leaving Lesotho I though I'd been through the most striking mountain country I would ever see. I thought that only until reaching the Swartberg mountains in the southeastern part of South Africa

We got our first taste of the Swartberg as we passed through Merring's Poort, a spectacular road pass following the channel cut through the mountains by the Grootstroom (great stream). The road crosses and recrosses the stream twenty-six times beneath towering cliffs of warped and twisted rock splashed with velvety colors of brown, orange, and yellow blending and mixing with each other

Although spectacular at any time, it was even more so when you consider that we had just spent most of the day traveling mile after mile through the flat, arid desert of the Great Karoo, and now found ourselves beneath great sandstone cliffs made even more stunning by the long shadows cast by the setting sun. Quite a marked change of scenery.

But the drive through Merrings Poort was by no means all that Swartberg had to offer Hidden within the Swartberg mountains is a once-lost valley called Die Hel (the abyss) The valley has a very interesting history.

During the Anglo-Boer War a band of Boer guerillas found themselves hotly pursued by British soldiers Since all the mountain passes were closely guarded by the British, they decided to lead their horses directly over the range and escape into the Great Karoo where they hoped to rejoin the main body of their commandos led by General Smuts

Darkness set in before they had made the summit and clouds swept in and enveloped the peaks They shivered in the dampness until dawn, then started making their way down the other side of the mountain. It wasn't until almost four o'clock in the afternoon that they were below the clouds They expected to see the Great Karoo, but instead found themselves looking down on a narrow valley A few primitive-looking mud huts were scattered across the valley floor.

They went down to investigate and were greeted by a giant, shaggy white man who spoke to them in a strange, long drawn-out Dutch It seems his name was Cordier and he was head of a small community living in the valley. For two nights the visitors remained as guests, then Cordier and several of his sons guided them along secret paths across the rugged mountains to the Great Karoo.

The history of this hillbilly community was strange. According to them, a party of trek-boers (nomadic farmers) had been wondering along the northern slopes of the Swartberg about the beginning of the 19th century. Several of their animals made their way along the Gamka River to the hidden valley. Following the tracks of their missing livestock, the trek-boers discovered the valley and decided to settle there. It was uninhabited although numerous paintings in the caves, as well as wooden peg ladders up the rock faces to reach wild hives, were indications of the former presence of Bushmen Shut in the mountains and quite self-sufficient they had been forgotten by the outside world

In 1962 a road of hair-raising heights, twists, rises, and drops was built back to the Valley of Hel It's 30 miles of the most exciting road I've ever been on Although the whole length of road is breathtaking, the final descent into the valley of Hel is awesome To say that the road was a steep, twisty, narrow path gouged out of a cliff face is somewhat of an exaggeration - but not much!

As we traveled up the floor of the valley, I didn't think that the stony soil and scrubby vegetation looked quite like the Promised Land. Nevertheless a handful of people withdrawn from society still call the valley home

Suddenly I slammed on the brakes. All four wheels grabbed at the loose gravel trying to get a hold as we slid to a halt. There, squarely in the center of the road was a baboon skull looking strangely human with its gray hair still clinging to its scalp, empty, ominous eye sockets staring out of nowhere into nothing, the grinning teeth bidding us an eerie welcome

With my heart pounding, I took a long look sizing up the situation in the pale light from an overcast late afternoon sky Slowly I drove around the guardian of Hel hoping not to offend any spirits lurking in the shadows.

Just as we started the climb out of the valley back to the outside world, the sun suddenly burst through the clouds setting the mountains ablaze in a plae, ghostly sort of light casting long shadows and giving an even eerier atomsphere to the day's end

As we turned for one last look across Hel, we caught the last rays of the sun before it was extinguished behind a distant peak. The night quickly rushed in to take control, but not before the sun had painted the retreating storm clouds with vivid colors.

It's a bargain when it's a Stihl.

Beef prices defended

COLUMBIA, Mo - The current increases in beef prices are needed to put the cattle industry back on a "sound financial basis," says a University of Missouri-Columbia agricultural economist

Market forces in response to the cattle industry's "worst depression since the 1930's" may cause prices to go up by as much as 35 per cent over 1976 levels, says Joe Meisner, a food policy specialist.

"Beef price increases this spring are a market reaction to a complex set of forces, mainly the result of a four-year reduction in cattle herds caused by adverse economic and weather conditions," says Meisner

"Substantial price increases are needed if cattlemen are to recover their losses and get their business back on a sound financial basis."

Meisner says the share of consumers' incomes spent on beef in the next two years is likely to be similar to that of 1973, the last high point in the beef price cycle.

"At the same time, beef supplies at least as large as the 1973 levels of 110 pounds per capita (that's based on carcass weight, before trimming and cooking) will likely be available through most, if not all, of this period

"There is no evidence at this point that consumers will not have adequate supplies of red meat," Meisner says.

Another UMC agricultural economist, Glenn Grimes, minimized the importance of the recent rise in the quotas of imported beef.

"From a hard, economic standpoint, this will have a very minimal impact on the prices of live cattle and on beef," Grimes says. The additional imported beef will only amount to about one per cent of total U.S. beef consumption, he notes.

Meisner says the large supply of beef produced since 1973 could have only been consumed "at substantially lower prices in real terms—that is, with the effect of inflation removed

"Likewise, if per capita supply drops back to the 1973 level of 110 pounds per capita from the 129 pounds in 1976, the market could experience a substantial price increase over the next two to three years—perhaps 30 per cent over the 1976 level.

"Counting inflation and increased demand due to higher incomes, it could rise by as much as 35 per cent over the 1976 average," he says.

However, Meisner emphasizes that consumer beef prices have lagged behind the general inflation in the last few years.

Citing the beef price survey by the National Cattlemen's Association, Meisner says May beef prices were up on the average "only six per cent from the previous high in 1975, while the over-all Consumer Price Index has increased 18 per cent and average consumer disposable income has increased 27 per cent since 1975.

"Also, the share of disposable income spent on beef in 1977 was the lowest it has been in more than two decades, at 2.13 per cent.

"Since per capita beef supplies and consumption have been on an upward trend, it's obvious that retail beef prices in real terms have been on a long-term downward trend.

"With the share of the consumer's dollar spent for food and for beef on a long-term downtrend, the basic cause of inflation obviously is in other sectors of the economy."

Meisner notes that cattlemen's returns on investment have been negative in the past four years.

"Beef at the food counter comes only if the many operations involved in bringing a calf from its infancy on through its grazing period and eventually to the retail store can all cover their costs."

New approach found for controlling insects

COLUMBIA, Mo - A new approach to insect control has been uncovered by a University of Missouri-Columbia entomologist who found that some insects hibernated because of a "juvenile hormone" secreted from a gland inside their heads

By manipulating the hormone, G.M. Chippendale believes he can either extend insects' hibernation or abort it. Either tactic could disrupt the insect's life cycle and kill it.

Chippendale says his research offers three potential ways hormones might be used to disrupt insect hibernation (diapause).

- One way would be to throw active insects into an early diapause and therefore curtail their feeding

- Another would be to bring insects out of diapause during the winter when they would starve because no food would be available to them.

- Keep the insects in diapause, causing them to use up their food reserves and die.

The UMC researcher says future insect control will include "tailor-made pest controls," including insect growth regulators, sex attractants and perhaps anti-hormones playing an increasing role in pest management practices.

When frying chicken for a picnic, the National Broiler Council says cool in the refrigerator, not at room temperature. Wrap in foil and place in an insulated cooler for traveling

Milk sample preservative developed

UNIVERSITY PARK – Dairy scientists at Penn State have developed a new preservative to keep raw milk testable for measuring butterfat level and protein content – in addition to white blood cell count denoting bacterial infection. The new product, effective up to two weeks, may replace the present chemical used to preserve milk for such sampling, as reported July 11 during meetings of the American Dairy Science Association at Michigan State University.

The new Penn State milk sampling preservative has been found equal to or superior to chemicals now used by dairy herd improvement associations throughout the U.S. These agencies process about 3,500,000 raw milk samples each month.

"If preserved milk samples must be kept longer then one week at room temperature prior to testing, than either potassium dichromate, the preservative now used, or the new Penn State product is the most suitable," declared Rodger H. Jonas, graduate assistant in food science at University Park. Jonas developed the new milk preservative as part of his master of science research, under a project of the Pennsylvania Agricultural Experiment Station

Jonas indicated an alternative to potassium dichromate may be required in the future due to possible tighter controls on chemical substances by the U.S. Environmental Protection Agency. Experiments have found no serious hazards associated with the use of the Penn State preservative.

Centralized facilities for determining butterfat and protein levels in raw milk, as well as somatic cell counts, are expanding rapidly in the nation. The DHIA laboratory at Penn State, for example, now handles 220,000 butterfat tests monthly, 50,000 somatic cell counts, and 10,000 protein determinations.

The new product meets a major requirement for an effective milk preservative -- it prevents coagulation of the milk sample without losing "testability", Jonas affirmed. In addition, the new preservative dissolves readily in the milk sample and has no harmful effect on the testing equipment. The Penn State DHIA lab uses automated equipment in its milk testing operations.

The Penn State preservative was compared with most other known milk sampling perservatives. The various products were compared using milk from four breeds of dairy cows - Holstein, Guernsey, Jersey, and Ayrshire - and mixed herd milk.

Since refrigeration has always been considered too costly and impractical, the need for improved chemical preservatives is ever present, it was pointed out. To be effective, such a preservative must control bacterial growth for one to two weeks without damaging test results or the testing equipment at reasonably low concentrations. And the preservative must provide stable readings, be relatively inexpensive and handle easily.

Brochure available

DE FOREST, Wis. – Crossbreeding is the title of a new brochure recently published by American Breeders Service, DeForest, Wisconsin.

The full-color brochure illustrates how crossbreeding and the newer beef breeds can be best used to improve productivity of basic Angus, Hereford, Shorthorn, and Brahman herds. It discusses crossbreeding systems that are practical and easily controlled through limited use of A.I.

It illustrates, pictorially, color patterns and conformation of calves resulting when two or more breeds are combined.

It's all aimed at helping commercial cattlemen develop more productive cow herds through crossbreeding.

Crossbreeding is available from ABS Representatives, or by writing to American Breeders Service, DeForest, Wisconsin 53532.

Twin Valley Bible Academy wins 28 awards in regional contest

CHURCHTOWN – Boys and girls from Twin Valley Bible Academy walked away with 12 first prizes, eight second places and eight third places earlier this year in the Eastern Regional Competition of Christian ACE-Schools at Camp of the Nations near South Gibson, Pa.

For the third year in a row, the school won first place among 21 competing schools from eastern Pennsylvania. Twin Valley Bible Academy is located one mile east of Churchtown on Route 23. Over 300 students competed in approximately 60 categories.

Major areas of competition included academics, arts and crafts, athletics, vocal and instrumental music, dramatics and persuasive speaking. Four of the winners from Twin Valley Bible Academy will be sending their projects to the National Convention of Christian ACE-Schools at Hyles Anderson College in Hammond, Ind. They are: Pam Beattie, short story; Tom Palmer, poetry; Linda Burman, acrylics; and Bob Williams, decoupage.

The 12 first-prize winners were: Pam Beattie, short story; Tom Palmer, two first prizes for preaching and poetry; Eric Fisher, ventriloquism; Linda Burman, acrylics; Bob Williams, decoupage and weight lifting; David Williams, 100-yard dash and high jump; LeRoy Lilley, 220-yard dash; team of David Williams, Tom Einwechter, LeRoy Lilley and Jack Einwechter won both the 440- and 880-yard relay.

The eight second-place winners were: Paul Stoltzfus, vocal solo; LeRoy Lilley, place kicking; Tom Palmer, reciting poetry; David Williams, long jump; Lynette Leinbach, sketching; Julie Burman, ping pong; Renee Stoltzfus, crewel; Kathy Ball, Lynette Leinbach, Carol Stoltzfus, Anna Fisher, Tracy Moore, Renee Stoltzfus, Martha Saint, Priscilla Saint, Pat Shumate, Wendy Mountz, and Marnita Stoltzfus together won second place for vocal ensemble.

The eight third-place winners were: David Leinbach, chess and one-mile run; Pam Beattie, instrumental solo; David Mohl, 440-yard dash; Eric Fisher, weight lifting; Priscilla Saint, sewing sportswear; David Mohl, essay; and the trio of Wendy Mountz, Renee Stoltzfus, and Priscilla Saint for vocal solo.

Time to report crop acreage

NEWARK, Del. – Farmers who have planted corn, sorghum and soybeans are reminded that now is the time to report the sizes and intended uses of their 1978 program acreages, according to directors of the Agricultural Stabilization and Conservation Service.

Final acreage certification date for these crops is August 1, 1978.

This acreage report is a little more detailed than others of recent years because the program assistance for farmers is more extensive. The benefits are also available to farmers who are growing the crops but not participating in the set-aside programs, if they will report their acreages.

Needed in the report at the ASCS county office, are: The 1978 crops and acreages planted and the uses to be made of these crops; crops and acreages of set-aside and those diverted for payment; and wheat crops for haying or grazing for payment.

The county ASCS office will make random checks of farms to verify that acreage reports are accurate, and will also make aerial photographs available for farmers to identify their fields.

Accurate certification is necessary before the farmer can receive the benefits of price support and disaster, deficiency, diversion, or grazing and haying payments.

Russia wants more meat

CHICAGO, Ill. – At least one country isn't jumping on the eat-less-meat-eat-more-grain bandwagon. During a recent tour of the Soviet Union, U.S. Dept. of Agriculture Secretary Robert Bergland learned that Russians plan to boost livestock production to increase domestic meat consumption. According to Boris A Runov, All Union Deputy Minister of Agriculture, "Right now our meat consumption is 55 kilograms (121 pounds) per person (per year). By 1980, we want to raise it to 75 kilograms (165 pounds)." And just how do the Russians plan to boost livestock production? By expanding their use of grain feeding, which they have found is the fastest way to increase the supply of meat.

Increase Your Alfalfa Yields?

Look at these test results:

First cutting Nothing was added to normal fertility program
Second cutting 3 gallons 9-18 9 or 10-20-10 plus one gallon MEDINA. Each cutting then had the same treatment, only at the half-gallon rate on MEDINA

RESULTS	1st cutting	485 bales
	2nd cutting	600 bales
	3rd cutting	650 bales
	4th cutting	738 bales
	5th cutting	730 bales

Sixth was not cut due to wet fall in 1977 It is most unusual for the later cuttings to be better than the first two

Average increase over 1st cutting was 193½ bales per cutting — over a 40% increase
The 9 18 9 used in this test was Va Chures Other 9 18 9 or 10 20 10 should perform in a similar manner

Every alfalfa grower knows that normally the first two cuttings are the highest yielding **We changed that** – Perhaps you can too Be sure to apply the MEDINA and fertilizer (water may be added) within 5 days after cutting – 3 to 5 days are best 10-20-10 or similar fertilizer should work equally well Try this program on your hay

MEDINA may be mixed with all insecticides and fungicides and with liquid and dry fertilizer

Clair Hershey to work at International Ag Center

By KENDACE BORRY

ELM — If all goes according to schedule, Clair Hershey and his wife Anne, should be well on their way to Columbia, South America, by now. When speaking to the couple on Tuesday of this week, they were simply waiting for word that their visas had arrived before leaving for their new home.

They are flying to Cali, a city of one million people located close to the Equator. There they will take up residence as Clair starts his new job at the International Center for Tropical Agriculture, located near the city.

The International Center for Tropical Agriculture is an autonomous nonprofit institution dedicated to agricultural research and training at the international level. In coordination with governmental institutions and other organizations dedicated to increasing the production and productivity of basic food crops used for human subsistence, it works forward the goal of contributing to the improvement of the nutritional levels and the general welfare of the low-income urban and rural populations in the Tropics It is part of ten such centers located around the world

The crop that Clair will be working with is cassava, a root crop somewhat like sweet potatoes. This is the crop that the product tapioca comes from

Clair Hershey first heard of the international center while doing his graduate work for Cornell University He worked on a project dealing with corn in Mexico He spent from June 1976 to November 1977 there, doing his thesis research on corn and insect resistance.

Fascinated by the international work, he became familiar with the centers, heard about a job, and applied for it. As a result, he will be travelling to the Latin American country

Clair is familiar with the agricultural scene, growing up on his father's farm, just north of Penryn, in Lancaster County. There he worked on the dairy farm until leaving for higher studies.

He has signed a two-year contract, and he expects life not to be too different than that of the time he spent in Mexico with his wife

"I expect that I'll have to work pretty hard," Clair related. "I'll be working with a new crop and I'll need to learn all I can about it. Plus we hope to do some travelling throughout the area.

In Columbia, Clair will have his own car to travel to the research experiment stations located throughout the country. He noted that the seasons in Columbia are divided not by heat and cold but by the two wet seasons and the two dry ones

He thinks his biggest challenge will be to become involved with the Columbian culture.

"It seems that an American is always known as an American," he stated "We can never be integrated into another culture Of course, my being six feet tall makes me stand out from the Latin Americans from the start."

Now that the departure time was fast upon he and his wife, he expressed his desire that he would have had more time to prepare for his entering the country.

"I wish I could have read more and learned more of the history and customs of the country," he said. "Both my wife and I know passable Spanish, but we like to learn all we can before we enter a country."

He expects that in the future he will continue with this type of international agriculture work. He thinks of the possibilities of someday travelling to Nepal, but added, if not there, he'd probably travel somewhere else.

Clair Hershey, and his wife Anne, hope to be leaving for Columbia, South America this week. There Clair will be working at the International Center for Tropical Agriculture.

More farm safety needed on highways

ELVERSON — With the approach of combining season and with hay making in full progress, roads in Pennsylvania are apt to be crowded with oversized pieces of farm equipment in the next several months. This mixture of slow and fast moving vehicles can lead to rural road tragedy.

In 1973, alone, farm equipment was involved in about 20,000 accidents on public roads - 170 dealing with fatalities Many persons were injured, and proerty damage ran into the millions of dollars About half of these accidents involved collisions with motor vehicles. Most of the time those killed or seriously injured were on the farm vehicle.

Most accidents such as this can be avoided if motorists remain alert for slow moving vehicles, and the farmer employs appropriate driving tactics to avoid collisions

A primary rule for operating farm vehicles safely on roads is for the operator to be able to see and to be seen In tractors equipped with cabs, clean the windows and be sure the wipers work before starting. Also clean glasses, if you wear them.

As required in Pennsylvania, display your slow-moving vehicle emblem Be sure it is mounted where it can be easily seen by vehickes approaching from the rear. Be sure it is clean. If your tractor is equipped with flashing warning lights, use them. Be sure all lights and reflectors are clean and operative before entering the roadway. After dark and in bad weather weitch on your regular lights Be sure your headlights are aimed properly and your tail lights are readily visible

Another frequently overlooked area is visibility from your driveway and field roads. Clear away growth blocking your view and avoid planting tall crops where they impair vision.

It's best to allow only licensed drivers to take farm machinery out on public roads. Even though most youngsters are strong enough to operate machinery in the field, they lack the knowledge, judgment, and experience to safely deal with the traffic and special hazards of the road.

Farm vehicles will haul almost everything safely - except an extra rider, particularly a child. Many young riders are senselessly killed or maimed in falls from farm machinery each year - while others are run over simply because they cannot be seen. Keep youngsters off and away from your equipment both in the field and or the road.

Before venturing onto a road, check the tires to see that they are properly inflated - this is expecially necessary on heavily loaded wagons. Be sure all hitch pins are locked in place. Loads should be properly distributed and balanced to minimize sway. Tractor brake pedals should be locked together.

When pulling wagons or other wide or long equipment, be aware of the time it takes to get fully onto or across a road or highway from a dead stop. A big tractor and wagon needs about 10 seconds - an auto traveling 55 mph would cover about 800 feet in the same amount of time. Be aware of the width of your vehicle, and try to keep it all within your own lane. The combination of a big tractor pulling a heavily loaded wagon puts terrific demands on brakes To assist brakes, shift to lower gears when going down hills. Never coast. Don't pull loads too heavy for your tractor to stop and control. If you haul heavy loads frequently, especially on hilly terrain, equip wagons with brakes

Other defensive driving reminders for farm vehicle operators include: • Obey all stop signs and stop at all intersections without signs. • When road and load conditions permit, drive at full road speed to reduce the difference between your speed and that of other vehicular traffic. • Slow down if roads are slippery or rough, or your tractor becomes hard to handle because of wheel hop, shimmy, unbalanced or shifting ballast, swaying, or a bulky load. • Slow down for turns and signal them when possible. • When turning right, do not swerve into the left lane, and when turning left be sure no one is attempting to pass you. • Avoid all sudden - erratic - unexpected maneuvers. • If something goes wrong, pull off the road and set up flares

Finally, the risk of injury in cases of roadway mishaps is greatly reduced if you have a tractor equipped with roll-over protection devices such as a cab or roll-bar and seat belts.

Inspection of transplants urged

HARRISBURG — State Agriculture Secretary Kent Shelhamer says that Pennsylvania's vegetable growers should inspect their transplants, as bacterial spot and bacterial speck have recently been detected in some midstate counties.

According to the Agriculture Secretary, both diseases reduce the quantity of fruit suitable for fresh market. The diseases are characterized by small spots or specks on the fruit which usually cause defolitation of the plants.

Shelhamer urged special caution to growers of tomatoes and peppers, suggesting that to minimize losses to bacterial diseases, growers should use a fixed copper fungicide according to the label.

Shelhamer said that every year, Pennsylvania's vegetable growers import more than 60 million vegetable transplants from southern states. On arrival in Pennsylvania, plants with symptoms of these diseases are destroyed. He noted that this year, the diseases have been detected in Adams, Franklin and Northumberland Counties.

Growers who require additional aid in identification or control of these diseases should contact the regional Plant Industry headquarters of the Pennsylvania Department of Agriculture.

Food dollar includes 23 cents for processing and packinging

NEWARK, Del. – For every dollar we spend on food, about 23 cents goes for processing and packaging. In fact sometimes the package costs more than the food inside, points out home economist Sue Matusiak of the University of Delaware Cooperative Extension Service.

We can blame it on our high standard of living, she says. Processing and packaging requre labor, and our money pays for this labor. As wages rise, so do processing and packaging costs, as well as food prices.

Another important factor is competition. Every brand vies for more shelf space, using expensive advertising, fancy packaging, coupons, bonuses, and other promotional gimmicks In addition, the trend is toward more highly processed convenience foods These all lead to higher food prices, says Ms Matusiak

The third problem is waste. Some wrapped foods are placed in containers, which are then put into cardboard boxes, and finally into plastic bags Packaging of this kind is unnecessary, wasteful and expensive It ups your food bill and costs you additional money when the sanitation department must dispose of this waste.

In contrast, the Europeans frequently use plain wrapping paper and their own permanent shopping bags. This practice could save the U.S. tons of paper and millions of consumer dollars.

There are ways to avoid some of these packaging and processing costs, points out the extension home economist.

Don't buy highly processed foods, except those that cannot be conveniently made at home, such as cottage cheese or frozen orange juice. For example, if you buy frozen spaghetti dinner on an aluminum tray with pre-packaged, pre-frozen Italian bread and grated cheese, you're paying a lot more for the processing than for the food

Avoid fancy packages or containers inside containers. When excessive packaging is used as a means of selling a product, you wind up paying for this advertising.

Plan your meals around fruits and vegetables in season. Because of minimum processing and packaging costs, the fresh produce will likely be your best buy.

Consider planting a vegetable garden The walk from your garden to your kitchen cuts out transporters, wholesalers, retailers, processors, and packagers.

Food bills can be trimmed if you plan menus to take advantage of in-season items, and avoid highly processed convenience foods as well as over-packaged items.

Before putting an item in your shopping cart, Ms. Matusiak suggests, think about where your money will be going. Paying for unnecessary services lowers the value of your food dollar

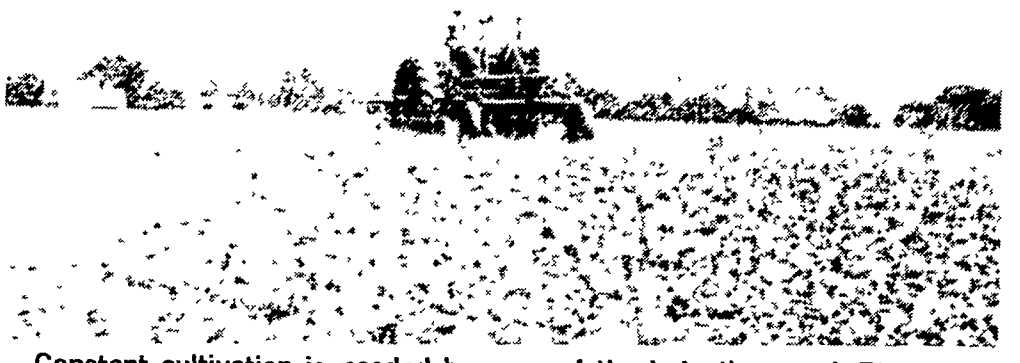
Raising celery

(Continued from Page 96)

celery, the cultivating, the harvesting, and the processing All take a great deal of time and effort He employs seven full-time workers and 20 to 30 part-time workers, between his work on the farms and retail operation.

Hodecker and his partner, Melvin Kreider, Lititz R2, retail all the celery that they grow. Besides the home shop on the East Petersburg farm, the celery is sold at various farm markets throughout the Lancaster County area. A total of 32 acres of celery is grown.

Hodecker told that the celery farms in Lancaster County, to his knowlege, are the only area in the U.S. where celery is grown on upland soil. Most of the celery in this country is grown on sandy loam or muckland soils, such as those found in California and Florida.



Constant cultivation is needed because of the irrigation used. The ground must be kept from getting too hard.

The celery in the field is irrigated on a regular basis, with the waterings about a week apart.

The crop is cultivated after every irrigation. This is to keep the soil from becoming too hard around the young celery plants.

These frequent cultivations also help cut down on weed problems in the field.

One of the reasons that Hodecker calls celery growing a high manual labor job is the blanching of the celery.

When the Summer crop is harvested, the celery is blanched in the field with strips of plastic held on both sides of the rows. These strips cut out the light and blanches the stalks to their crisp yellow color which the public likes.

The Fall celery is harvested by hand as late as November and laid in trenches in the field. It is covered with plastic and covered with ground. The crop can remain in the field this way until February. The celery will continue to grow in the trench and Hodecker stated that this celery is tastier than the Summer crop, due to the amount of time allowed for the blanching.

After being harvested, the celery is cleaned and washed in the facilities on the farm which have been recently expanded. There it is double trimmed and washed. Next it is put into crates and kept in the coolers, where up to 2½ to 3 trailer loads of celery can be stored.

During the months that the celery is out of season in Lancaster County, Hodecker trucks the crop in, usually from Florida.

Hodecker related that at the present time there is a demand for celery, the product being scarce. Part of the reason for the high prices and increased demands, he stated, were due to the floods recently in California and the cold spell which affected the Florida crop.

He added that it is a tough crop to raise, with many problems. Insects, he stated, weren't too much of a problem, but the nutritional demands of the crop could pose a threat to the crop. He said that he added and applied needed elements while the crop is growing to fill in any gaps which might be noticable.

The celery business is steady, Hodecker affirmed, but not too many new farmers go into raising the crop due to its demands. The raising of celery is not something that comes easy.

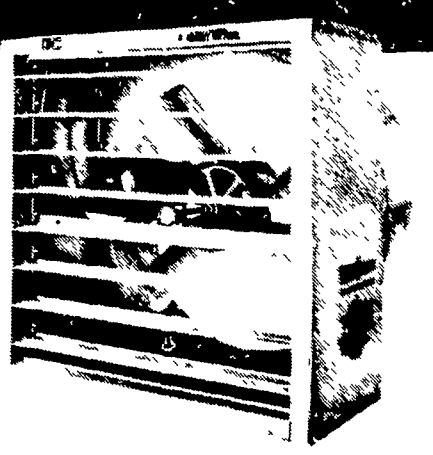
Vent-O-Matic's VER Can Save You Thousands of Dollars Per Year!



We always said ventilation efficiency is best measured by the cubic feet of air moved for each watt of electricity used

Now, specialists are stressing the importance of VER — Ventilation Efficiency Ratio — **and Vent-O-Matic can give you this information with its fans.**

Test results from the Tuscarora wind tunnel laboratory prove that Vent-O-Matic fans are the most efficient on the market. They were designed that way. Vent-O-Matic fans can save enough electricity to pay for themselves in less than three years And, going still further, a Vent-O-Matic System can save up to 30% of the brooding heating fuel because of its heat-saving design principle

These benefits are extremely important when you consider this statement from Pennsylvania State University· "In the last five years the cost of electricity has doubled while brooding fuel cost has tripled If this rate continues, the poultry industry will be gone from Pennsylvania by 1982."

Whether you have poultry, dairy, veal calves or swine, shouldn't you know the VER of your ventilating system? We'll be glad to send you the figures on the kind of energy efficiency and heat-saving you get with Vent-O-Matic Write — or call us — today

Solar energy can cure burley tobacco

BELTSVILLE, Md. -- Solar Energy can be an effective substitute for fossil fuel energy in preventing quality losses during curing of burley tobacco.

Value losses of up to 12 per cent can result from high humidity and consequent underdrying during curing. To keep the losses to a minimum, farmers have resorted to natural gas, LP gas, and coke as energy sources to lower the relative humidity of the air circulated in curing barns.

In cooperative research, scientists of the Science and Education Administration and the University of Kentucky Agricultural Experiment Station in a study conducted during one season have shown that a properly designed solar energy system probably can achieve results equalling those achieved with fossil fuels.

For maximum effectiveness, a solar facility must overcome the underdrying of burley tobacco that occurs when the relative humidity is above 70 per cent

To compare various concepts with the conventional system, the scientists built a structure made up of four independently operated forced ventilation curing chambers They were a conventional chamber with a metal roof, a chamber with a fiberglass roof to transmit solar energy, a chamber with a solar collector without heat storage, and a chamber with a solar collector and heat storage system The latter was designed with a buried rock bed to store collected heat for use over several days during rainy weather or other times when little usable solar energy is available

During the curing period, the average relative humidity was as much as 5 percentage points less in the fiberglass-roofed chamber and the solar-collector-no-storage chamber than it was in the conventional chamber But neither the fiberglass-roofed chamber nor the solar-collected-no-storage chamber contributed enough reduction in the humidity to warrant further study

By contrast, the solar-collected-storage system supplied enough heat during a 3-day rainy period to reduce the relative humidity from the 80 to 90 per cent range down to the desired 65 to 70 per cent range which is necessary to cure the tobacco effectively.

Static energy aids in storm forecasting

COLUMBIA, Mo. - University of Missouri-Columbia scientists have greatly improved the odds for more accurate forecasts of local thunderstorms and tornadoes

The key is "static energy"

'Static energy expresses in a single quantity the combined effects of the air temperature, moisture and elevations," says Grant Darkow, atmospheric scientist who developed the static energy formula.

"Each of these three elements has been studied individually and extensively for many years and is known to play a key role in severe storm development."

The static energy formula can be calculated simply (without aid of a computer) from ordinary observations made hourly at weather stations. As such, says Darkow, it greatly tightens the grid of the observational network

In developing the formula, the UMC scientist compared the static energy amounts at the surface and aloft in those areas in which tornado-bearing storms eventually formed versus those in the surrounding area in which only non-severe storms developed

"In this manner," he said, "we were able to pinpoint some of the relatively subtle differences that caused the atmosphere to release its energy so locally and so violently"

Daily green-chop coming back

NEW HOLLAND - Daily green-chop is coming back, this time in rows. The new tractor-mounted choppers make it work.

This gives dairymen a late Summer production boost when pastures are tapering off. It also takes the pressure off the silos by delaying the need for feed from storage. That's like having more silo space without extra investment, say experts.

Starting with row-planted Sudax or other sudan-sorghum hybrids in July and moving on into corn in August, the mounted chopper gets the daily green feed with a lot less fuss than a trailer-type unit. Soft ground isn't as much of a problem. There's also less chance of the soil contamination that's common with a flail-type chopper.

The extra couple of month's feed is as good as a mid-Winter silo refill and a lot easier.

Effective forage quality is maintained better, too. The mounted harvester's fine chop moves the forage through the cow's rumen rapidly — just like fine-chopped silage. That's important in hot weather when coarse, flail-cut material couldn't do the job. The finer cut makes the whole difference.

Cutting the row-planted sudan-sorghum at a more mature "in-head" stage yields the double benefit of reduced prussic acid hazard plus higher tonnage per acre. Sudax at this growth stage is too mature to make the best feed if one uses a flail chopper.

But the finer cut of the mounted machines, lets the crop digest as rapidly as less mature flail-cut crop.

There's an important additional advantage on most farms where larger machines fill the silos. The mounted machines can keep going when early Fall rains turn corn fields to mud. The mud that stops trailer-type choppers doesn't stall the mounted unit as long as the tractor can wade on through.

Heat stroke possible

UNIVERSITY PARK - Hot weather takes its toll by reducing milk production. It can also cause the loss of an occasional animal due to heat stroke. Cows that develop heat stroke usually have some other factor that reduces their ability to regulate their body temperature. Some common situations that can be complicated by hot weather are: calving, milk fever, bloat, and acute mastitis.

A cow that is down with milk fever on a warm day may die rapidly if the low blood calcium is accompanied by heat stroke.

Cows with heat stroke show extreme discomfort, rapid breathing, and may foam at the nose and mouth. Their temperature rapidly climbs to 107 degrees F. or higher. The first consideration should be to cool the animals. One should use a cold water spray or soaked burlap bags; and provide shade. Next one can check rectal temperature every 15 minutes until it stays below 103 degrees F. A person should watch for a relapse within the next 24 to 48 hours. A farmer should have his veterinarian examine and treat the cow for primary problems which may have caused the heat stroke.

One can minimize his chances of having heat stroke by watching cows closely during hot weather and providing ample shade and water. The fresh cow or sick cow should be kept nearby where she can receive extra attention.

Fruit set affected by hot weather

FLEMINGTON, N.J. – Hot weather takes it's toll on the fruit set of tomato, pepper, and bean plants, say experts.

When the temperature at night stays in the high 70's and goes into the 80's, the blossoms of these crops fall off and no fruit will set.

Tomato and pepper plants are called "thermoperiodic" plants and need relatively warm days and cool nights for proper fruit setting.

What does this mean to vegetable gardeners? It means that any bean blossoms that were forming during hot weather will probably fall off. Even if they don't, there won't be any beans produced from seven to 10 days after the period of hot weather.

It takes 45 to 60 days (depending on the variety) for tomatoes to reach the red-ripe stage from blossom set. During this time span tomato production will be very small. There are some varieties of tomatoes that are more resistant to heat than others. However, the hot weather will not have any influence on the second set of blossoms as long as the temperature stays relatively cool at night.

Gardeners can expect very few if any peppers at the mature green stage which is 45 to 55 days as the result of very high temperatures.

Pachysandra diseases noted

FLEMINGTON, N.J. – There are two diseases that affect pachysandra, each serious in its own way.

One is canker, a fungus disease that attacks individual shoots or stems of the plant. Three or four clumps may be cankered.

In general, though, canker hits a pachysandra bed like measles just a spot here and there - say experts.

Pulling out the dead stems will help get rid of the disease now, but more effective control should begin at the start of new growth next Spring.

If instead of spotty damage in a pachysandra bed, one has an area three to four feet in diameter in which all the plants are dead, the trouble is pachysandra wilt.

One will find small, black, seed-like objects attached to the base of the stems of the diseased plants. In the warmer parts of the country this fungus lives through the Winter in the soil, but most Winters here are cold enough to kill the disease organism.

Sprays won't help if the trouble is pachysandra wilt. A person have to replant the area with new, healthy plants.

An Expert is someone who knows no more than you, but who has it better organized and uses slides.

USDA says retail beef prices are at their expected level

WASHINGTON, D.C. – The 2.5 per cent increases in the Consumer Price Index for beef during May was "the amount we expected and reflects the rise in live cattle and wholesale beef prices that occurred back in April and May," Howard W. Hjort, director of economics, policy analysis and budget for the U S. Department of Agriculture (USDA), said recently

"Recent declines in cattle and wholesale beef prices were not reflected in retail beef prices during May because changes in live cattle prices generally take several weeks to show up in retail beef prices," Hjort explained.

"The declines in live cattle and wholesale beef prices that occurred during June should be reflected at the supermarket in the next week or so," Hjort added "I expect packers and retailers to pass through the recent declines in cattle and wholesale prices."

Hjort cautioned consumers not to expect large declines in retail beef prices. "We still expect retail beef prices to remain considerably above last year's low level," he said "Shrinking cattle inventories and declining beef supplies will prevent producer prices from dropping to the depressed levels of the past two years This should preclude any substantial declines in retail prices for the balance of the year"

May's 2 5 per cent increase in retail beef prices announced June 30 by the Labor Department compares with the record 6 6 per cent increase during April. Overall food prices rose 1.5 per cent during May, compared with 1.8 per cent in April.

Live cattle prices had risen about 45 per cent since last Fall, to slightly over $60 per hundredweight for choice steers on June 1. The rising prices enabled cattle producers to operate at a profit after suffering losses through most of 1976 and 1977 The depressed cattle prices were reflected in relatively low, stable retail beef prices during those years

Since June 1, live cattle prices have declined $8 to $10 per hundredweight and wholesale prices for beef carcasses have dropped more than $10 As a result of the declines, cattle producers' profits have fallen considerably "These declines have been greater than can be justified by the meat supply situation, especially considering the strong demand generated by record employment and consumer earnings," Hjort said.

USDA studies show that despite the recent price increases, hamburger remains one of the best food buys in terms of protein content per unit of weight For example, it would take 66 cents worth of fish such as tuna or haddock to yield 20 grams of protein; 25 cents worth of hamburger would yield the same amount

Egg processors caught selling bad eggs

WASHINGTON, D.C – The U.S. District Court in northern Ohio this Spring sentenced two Cleveland egg processors to three years in prison for selling and transporting filthy and decomposed egg products to a bakery and two wholesale firms in Ohio.

Sydney Butler, deputy assistant secretary of agriculture for food and consumer services, said the U S Department of Agriculture brought legal action against Walter and Marshall Brudno for processing, transporting, and selling over 1 8 million pounds of adulterated egg products between January 1974 and April 1977, in violation of the Egg Products Inspection Act.

Walter Brudno was owner of Akron Sales, Cleveland, and his son Marshall was manager when the violations occurred The firm was closed April 26, 1977, after USDA investigators traced the adulterated eggs to the Brudno's firm Akron Sales had not registereed with USDA as required under the Egg Products Inspection Act for continuous inspection of egg processing operations. The egg products were processed at Akron Sales but were sold under the names of registered and non-existent plants.

Mimosa webworms active now

NEWARK, Del. - If one has a mimosa, honey locust, or moraine locust tree and sees small clumps of leaves webbed together, he probably has an infestation of mimosa webworm.

This busy leaf-muncher makes his appearance every year around this time, reports University of Delaware Extension entomologist Frank Boys. Spotting him quickly is important if one wants to prevent ugly defoliation of infested trees.

As these little pests become active, a person may also see silk threads hanging from the tree, with small, pale grey or brown caterpillars attached. Cars parked under infested trees will become covered with tiny droppings. As the infestation progresses, tree leaflets become skeletonized, turn brown, and die.

The adult of the mimosa webworm is a silvery grey moth about one-third inch long with a wing expanse of about one-half inch. But Boys says this form of the pest is seldom seen. The adult moths emerge in mid-June from pupae that have overwintered in the soil and begin depositing eggs on the foliage or under scales of bark.

The eggs hatch within a week, producing the caterpillars that pass through five stages before their own transformation into moths. The whole cycle requires about 45 days. Larve of the first brood appear in Delaware from late June to mid-July. A second brood occurs in August.

Mimosa webworm larvae are ravenous feeders, eating mainly the upper surface of leaves. They gradually defoliate the tree, leaving only their unsightly nests. Damage is confined to the foliage. Although trees are not killed by their feeding, repeated defoliations may lead to the eventual death of the tree from other causes.

Trees should be inspected at frequent intervals in late June and early July, advises Boys. With the first appearance of the webbed leaves, spray the tree promptly using Sevin (carbaryl) 50 per cent wettable powder at the rate of two tablespoons in one gallon of water. A person can also use Orthene or Spectracide (diazinon) 2E at labeled rates. Usually a second treatment is necessary in mid-August.

4-H club holds fun night

BAIR – The Thomasville 4-H Club met recently at the 4-H Center, near Blair, for a family fun night. Games were played. Members enjoyed ice cream in honor of "June Is Dairy Month."

Reservations were made for the club trip to Hersheypark on July 31.

Club members who gave demonstrations at the county and regional contests were Susan Eisenhart, Mike Welsh, Bonnie Wire, Nancy Eisenhart, Tommy and Joey Welsh.

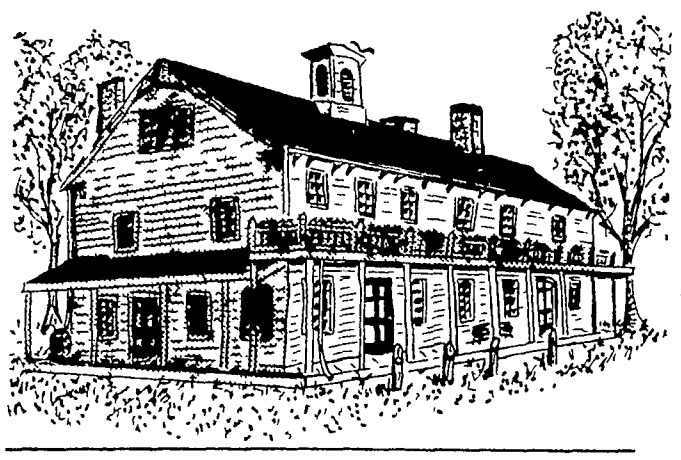
Historic inn preserved



Princessville Tavern
Built circa 1812

LAWRENCEVILLE, N.J. - A historic preservation auction, the first of its kind, took place here last Saturday. The public was given the opportunity to pay for any part of the Princessville Inn which it wished to restore All proceeds from this fund raising event were placed in a special preservation fund of the Lawrenceville Historical Society, to be used in the restoration of the Princessville Inn.

The Princessville Inn, formerly called the Red Tavern, built in the very early 1800's on the Princeton Pike, accommodated drovers who drove their livestock from their farms to the Pennsylvania and New York markets. For a time it was the only voting place in the township and a meeting place for social and political events It featured an assembly room, a ball room, as well as ample eating and sleeping facilities. The Greens, the Mershons, the Piersons and the Vanderbilts were the old Lawrence families connected with the Inn.

Since the Lawrence Historical Society is a non-political, non-profit organization, contributions are tax deductible Pledges for future payment are acceptable Checks should be made paybale to the Lawrence Historical Society, Box 6025, Lawrenceville, N.J. 08648.

Upon completion of restoration, the names of donors will be inscribed in a permanent record at the Inn.

USSR grain crop assessed

WASHINGTON, D.C – Chances appear good that the 1978 Soviet grain crop will top the 195.5 million metric tons produced last year This, according to the initial 1978 forecast by USDA's Foreign Agricultural Service.

Though seeding of Spring grains – which traditionally account for ⅔ of Soviet output – was substantially delayed, total plantings are still seen close to the 130 million hectares (about 320 million acres) planted last year That total was the highest since 1964

Still, the estimate puts total 1978 output in the 185 million to 225 million ton range. Wheat production is seen in the 87 million to 108 million ton range; coarse grains (rye, oats, corn, sorghum) in the 88-107 million ton range. Pulses and rice make up the rest

By comparison, U.S. grain production totaled 261 million tons last year, with wheat making up 55 million tons of the total; corn 161.5 million tons, sorghum, 20 million tons, oats, 11 million, barley, 9 million, rice 4 5 million, rye, 400,000 tons.

Watch awarded

NEW HOLLAND - Wallace S. Smith, tractor trailer truck driver, has completed 25 years of service with Sperry New Holland this July. He resides at 301 Valley View Dr., New Holland.

Smith will be awarded an inscribed watch or clock by the company to commemorate the anniversary.

Wool market up

Strong consumer demand for natural fibers helped the domestic apparel wool market rebound to 186 million pounds last year The total included around 96 million pounds processed in U S mills. Wool consumption is expected to rebound further from the 1974 textile recession, although imports may account for an increasing share. On a per capita basis, U S wool use worked out to 86 pounds last year, up from 83 in 1976, and only .53 in 1974

Sugar, acid determine tomato flavor

FLEMINGTON, N J. – Gardeners sometimes complain that modern-day tomatoes do not have the flavor of tomatoes grown 20 or 30 years ago As we grow older we tend to look back at the "good old days" as being better in most respects than 1978

The flavor of a tomato is determined by the ratio of sugar to acid in the fruit If the sugar/acid ratio is very low the fruit will taste sour or be insipid A reverse ratio makes the fruit unnaturally sweet Between the extremes are several levels of sweetness or tartness Personal preferences dictate which tomato variety is appealing and which variety is not, say experts

The internal "jelly" portion of the fruit is the most acid and it has the lowest sugar content Hence, if the characteristic of a given tomato variety is to produce a large cavity area in relation to the amount of fruit wall, this variety will have a tart flavor which many people prefer

On the other hand, if one is tasting a tomato variety which has a thick fruit wall, such as a plum tomato, it will be less acid because of the small cavity, and sweeter because of the thick wall. .

The internal color of a tomato is also related to the amount of fruit cavity as compared to the amount of fruit wall. The fruit wall contains the greatest amount of red pigment (called Lycopene) while the fruit cavity contains the greatest amount of yellow or orange pigment (called Carotene).

Accordingly, a plum tomato will have a wall that accounts for about 85 per cent of the total fresh weight of the fruit This type of tomato has a deep red internal color Most of the commercial garden tomato varieties produce a fruit wall which accounts for about 75 per cent of the total fresh weight.

On the other extreme, the wall of a cherry tomato fruit is 65 per cent or less of the total weight and the internal color ranges toward a yellowish-red hue.

Support mounts for legislation to register alien land owners

WASHINGTON, D C. - Three members of the House Agriculture Committee have joined in sponsoring H R. 13132, a bill to require foreign owners or buyers of U S farmland to register with the U.S. Department of Agriculture. Seeking the legislation are Reps. Rick Nolan (Minn.), John Krebs (Cal), and Chsrles Grassley (Iowa). The bipartisan measure would require foreign persons or corporations who now have an interest in American farmland to register within six months. Future purchasers would have to register within 90 days. The bill provides that a stiff penalty, up to 25 per cent of the market value of the land, could be imposed upon foreign owners who fail to disclose their ownership.

H.R. 13132 would require buyers to disclose the legal description of the land, the true owners, and the price paid for the land.

Introduction of the bill followed closely upon the issuance of the recent General Accounting Office (GAO) report, "Foreign Ownership of U.S. Farmland", which complained of the lack of reliable data and proposed a federal registration system.

H.R. 13132 defines "foreign persons" as individuals, who are not U.S citizens, or partnerships, trusts, corporations or other entities, including U.S corporations which are substantially controlled by foreign interests.

Marketed milk needs light protection

UNIVERSITY PARK - Exposed to fluorescent lights in food stores, fiberboard milk containers protect flavor and nutrient value better than milk in plastic and clear glass bottles, according to research at Penn State. The findings were reported July 12 during meetings of the American Dairy Science Association at Michigan State University, East Lansing

The fiberboard protected milk from off-flavors created by fluorescent light up to 72 hours in the experiments. However, milk in plastic and glass containers developed off-flavors after 24 hours of exposure to light in dairy display cases, reported Jonathan C. Hoskin, graduate assistant in food science at Penn State. The studies are part of continued research under the direction of Dr. Paul S. Dimick, professor of food science, to define flavor and nutrient quality of market milk.

The current experiments compared the effectiveness of five different gallon containers in protecting milk against light-induced off-flavors and loss of riboflavin, one of the B vitamins The gallon packages included three returnable plastic containers — Clear polycarbonate, tinted polycarbonate, and high density polyethylene — as well as clear glass containers and the fiberboard non-returnable cartons.

Of the returnable plastic containers, yellow tinted polycarbonate gave the greatest protection against development of light-induced flavor since it blocks the critical wavelengths of light which promote the reaction. Milk held in clear polycarbonate plastic, on the other hand, had no more flavor protection than clear glass or high density polyethylene cartons.

Riboflavin, a growth-promoting vitamin, lost only 6 per cent of its concentration in the tinted polycarbonate containers after 72 hours exposure to fluorescent lights The high density polyethylene and fiberboard cartons did equally well with only a 10 per cent loss. Riboflavin loss increased to 13 per cent in clear polycarbonate containers after 72 hours. The greatest loss occurred with milk in glass containers — 27 per cent loss in 72 hours.

Hoskin said 94 per cent of all fluid milk is now sold through retail stores in display cases using fluorescent lights Presently, gallon milk containers account for over 44 per cent of the fluid milk sold. This milk, Hoskin indicated, might not be consumed for up to nine days after processing

Stored in the dark, milk in all containers tested was very similar to milk unexposed to fluorescent light. All containers were held in a commercial, sliding-door display case at 45 degrees Fahrenheit During exposure the samples were illuminated with 100 foot candles of flurorescent light

It is evident from this and other studies, Hoskin pointed out, that the packaging material is a key to protecting quality of fluid milk under present marketing conditions. With increased use of transparent or translucent returnable containers, the need to limit light exposure is important, he affirmed.

TWO DAY
AUCTION SALE
OF ANTIQUES & COLLECTABLES
First Day Sale - FRIDAY, JULY 28
Starting 10:00 A.M.

For George Mayers, will be held in "THE HUT" Located to Rear of Edward's Carriage House Restaurant, On Delsea Drive (Rt. 47) in Clayton, N.J. Inspection Thursday, July 27th - 10:00 A.M.to 4:00 P.M. (Food, seating, air conditioned, rest rooms, ample parking-signs posted) "Please No Children".

Wildlife group sues over budget cuts

WASHINGTON, D C. - The National Wildlife Federation has gone to court in an effort to force the Carter Administration to spend more money on the nation's forests

In a suit filed in U S District Court at Washington, D.C., the NWF charges that President Carter and the Office of Management and Budget were "short sighted" in cutting the U S Forest Service's 1979 budget request from $2.4 billion to $1.8 billion.

The suit also charges that the Administration violated the Forest and Rangeland Renewable Resources Planning Act by making the 25 per cent budget cut without an explanation required by law.

The RPA law, according to NWF, the nation's largest citizen's conservation group, requires the President and OMB to explain whether their proposed budget would carry out Forest Service policies already set by Congress. The suit calls for a public explanation by July 14

Management of fish and wildlife habitat would be cut by the President from the $46 3 million requested by the Forest Service to $25 3 million Rangeland management would be reduced from $45.1 million to $24 9 million.

Reforestation and timber stand improvement would be cut from $106.2 million to $66 5 million "In this area, for instance, if the President's budget passes, 100,000 acres would have to be left unplanted after harvesting," said Peter Kirby, an NWF attorney. "This means the land would be more subject to erosion and would be more difficult to prepare for planting after being idle."

The Wildlife Federation suit also questions some of the priorities in the President's proposed Forest Service budget, including his funding of timber sales administration and management at 85 per cent of the amount requested by the Forest Service but reforestation and timber stand improvement at only 50 per cent and soil and water management at only 59 per cent

4-H contest held

WEST CHESTER – The Chester County 4-H Physical Fitness Contest was held July 6 at the Lionville Junior High track and field.

Thirty-two 4-H'ers participated in the 50 yard dash, the 600 year run-walk and sit-ups, among other activities.

The county winners in the senior division are eligible to attend state competition at Penn State on August 7 to 9.

They include· Ed Kulp, Pottstown; Mike Weinstock, Phoenixville; Robert Melson, Exton; Sue Kulp, Pottstown; Jacky Mento, Downingtown; Kathy Maule, West Grove; Nancy Yarnall, Oxford; Sarah Nothstine, Downingtown; Howard Mark, West Grove and Autumn Dovin, Honeybrook.

Denise Vasko, Phoenixville; Josh Weinstock, Phoenixville; Ann Raser, Kimberton, Andrea Wallace Parkesburg and Cheryl Kennedy achieved the highest scores in the junior division.

The event closed with an obstacle course and the handing out of awards by Jan Renner, Extension home economist

Judges for this competition that represented York County were Mrs Cassie Schneider, Wellsville; Mrs. Sharon Ebaugh, Delta; Ann Hoover, Meadowbrook Blvd., York, and Mrs Peggy Frey, East Berlin.

Farm pop. down

Last year, the U.S. farm population dropped 5.4 per cent or by roughly 450,000 people, according to a joint report by USDA and the Bureau of the Census. An average of 7.8 million persons – about 3½ per cent of the total U.S population – lived on farms in rural areas of the United States during the 12-month period centered on April 1977. During 1970-77, the number of farm residents declined an average of 3.1 per cent a year. The rate of loss differed markedly by race, with an average annual loss of 2.5 per cent for whites, versus 10 3 per cent for blacks

Gypsy moth spraying completed

HARRISBURG -- The Department of Environmental Resources announced the completion of the 1978 Gypsy Moth spraying program which involved a total of 135,166 acres in 24 eastern counties

James O. Nichols, Chief, Division of Forest Pest Management, said the acreage included 128,301 acres on private lands and 6,865 acres of State owned lands.

Nichols went on to explain that private lands treated were all forested communities or rural forested residential properties and a few municipal watersheds, the latter at the request of local water companies.

He also noted that it is too early to assess the gypsy moth situation for 1978 since insect development was delayed by the late Spring. However, defoliation should have reached its peak stages by July 10.

There also are many areas where the defoliation may be less than anticipated due to substantial increases in the parasitic flies, "Parasetigena silvestris" and "Blepharipa pratensis," said Nichols.

These are the large "friendly flies" that like to light on people. Although they do not bite, he said, complaints concerning the flies are "running even or more with those on the gypsy moth."
